

NEW

Control System Basics For HVAC Technicians

A new addition to the Lama series of books for the Indoor Environment Technician, Control System Basics will provide an understanding of how controls operate and how they relate to the entire HVAC system. This 85 page handbook explains the basic concepts of automatic controls, focusing for the most part on pneumatic control systems which are used in many older buildings. Learn how to maintain a pneumatic control system, identify problems and refer them to a controls technician. Also included are practical tips on basic control system maintenance and the identification of problems.

Contents:

- ♦ HVAC Systems
- ♦ Basics of Control Systems
- ♦ Electric Control Systems
- ♦ Pneumatic Control Systems
- ♦ A VAV Pneumatic Control System
- ♦ Maintaining Control Systems and Identifying Problems

\$38 for members \$58 for non-members

Plus \$12 postage and handling (add \$1 for shipping for each additional manual ordered) plus GST/HST/QST
