

West Nile Virus National Surveillance Report

English Edition

October 23, 2005 - October 29, 2005 (Week 43)

Canada

Human:

During week 43, one new West Nile virus (WNV) clinical case was reported in Ontario, and one old case was removed from Ontario. A previously reported case in Quebec was also removed this week, reducing the total case count by one from last week. As of October 29, 2005, 226 WNV clinical cases and 13 asymptomatic infections have been reported to the Public Health Agency of Canada (PHAC). Of the 226 clinical cases, 51 (23%) were reported as West Nile Neurological Syndrome, 168 (74%) were reported as West Nile Non-Neurological Syndrome, and 7 (3%) were Unclassified/Unspecified. To date, there have been 12 deaths [Saskatchewan (2), Manitoba (1), Ontario (8) and Quebec (1)] reported in patients with WNV infection.

Bird:

During week 43, 10 dead birds were tested and none (0%) were reported positive for WNV (see bird table). A total of 3979 dead birds have been tested since May 2, 2005, of which 447 (11%) were positive for WNV. Of the 447 positive birds, 331 (74%) were identified as American Crows and 115 (26%) were Blue Jays.

Domestic Animal:

As of week 43, 21 horses positive for WNV were reported in Ontario (5), Manitoba (4), Saskatchewan (10) and Alberta (2).

Mosquito:

As of week 43, 695 mosquito pools positive for WNV were reported in Alberta (1), Saskatchewan (110), Manitoba (193), Ontario (291) and Quebec (100).

National West Nile virus surveillance data and maps can be found on the Public Health Agency of Canada (PHAC) web site at: <http://www.phac-aspc.gc.ca/wnv-vwn/index.html>

Provinces/Territories: Detailed WNV information can be accessed through the Links section on the PHAC WNV web site.

United States

Human:

Between January 1 and November 1, 2005, a total of 2581 WNV cases were reported to the Centers for Disease Control and Prevention (CDC) in the U.S. Of these 2581 cases, 1053 (41%) were reported as WN Neuroinvasive Disease, 1363 (53%) were reported as WN Fever (Non-Neuroinvasive Disease), and 165 (6%) were Unspecified. To date, 83 deaths have been reported.

States: Detailed State information can be accessed through the CDC web site: <http://www.cdc.gov/ncidod/dvbid/westnile/surv&control.htm>

Percentage of Dead Birds¹ Tested Positive for WNV, by Report Week, Canada 2003, 2004 & 2005, and Number of Dead Birds¹ Tested Positive for WNV, by Report Week, Canada 2005

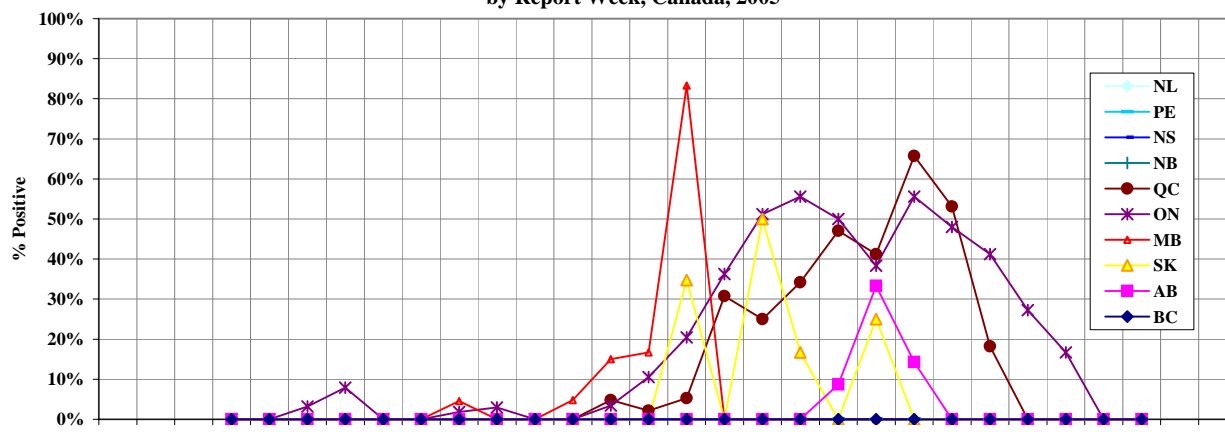

¹ Mostly corvids (e.g. crows, blue jays, grey jays, scrub jays, stellar jays, magpies, and ravens).

¹ Mostly corvids (e.g. crows, blue jays, grey jays, scrub jays, magpies, and ravens)

² Requires additional testing before it can be considered a confirmed result

³ Canada weekly proportion positive

⁴ Once a positive corvid was identified in a Regional Health Authority (RHA), collection and testing of corvids ceased in that area.

Corvid surveillance in northern areas of Manitoba was discontinued effective September 16th.
