1 For exports, mode of transport information represents the mode of transport by which the international boundary is crossed. This may be different from the mode of transport within Canada. Total exports are the sum of domestic exports and re-exports.

2 For imports, the mode of transport represents the last mode of transport by which the cargo was transported to the port of clearance in Canada and is derived from the cargo control documents of customs. This may not be the mode of transport by which the cargo arrived at the Canadian port of entry in the case of inland clearance. This may, therefore, lead to some underestimation of Canadian imports by the marine and air transport modes.

1 For imports, the mode of transport represents the last mode of transport by which the cargo was transported to the port of clearance in Canada and is derived from the cargo control documents of customs. This may not be the mode of transport by which the cargo arrived at the Canadian port of entry in the case of inland clearance. This may, therefore, lead to some underestimation of Canadian imports by the marine and air transport modes.

2 Province of clearance for imports as final destination is unknown.

Note: All figures are based on 12 months annual weighted data.

Industries classified in accordance with the North American Industrial Classification System (NAICS).

Regional data include employment data of establishments primarily engaged in the water transportation of passengers and goods, and primarily engaged in providing scenic and sightseeing transportation on water, such as sightseeing or dinner cruises or air-boat rides.

Total employment includes support activities for water transportation (i.e. employment related to port and harbour operations; marine cargo handling; navigational services to shipping; marine salvage services; ship piloting services and other navigational services to shipping).

1 Includes deep sea, coastal, Great Lakes water transport.

2 Includes Inland Water Transport.

3 Includes scenic and sightseeing water transport.

4 Includes Incidental Services (i.e. "support activities relating to water transportation").

5 Newfoundland and Labrador, Prince Edward Island, New Brunswick, Manitoba, Saskatchewan, Alberta, the Yukon, Nunavut, the Northwest Territories.

Further breakdown of provincial data is not available for reason of data confidentiality.

Level definitions from 1997 to 1999:

- Levels I-III: Canadian air carriers that in each of the two calendar years immediately preceding the report year transported 5,000 revenue passengers or more or 1,000 tonnes of revenue goods or more.
- Level IV: Canadian air carriers not classified in Levels I-III that in each of the two calendar years immediately preceding the report year realized annual gross revenues of \$500,000 or more for air services for which the air carrier held a licence.
- Incidental services: jobs that are associated with the air industry but are not defined in Statistics Canada's catalogue.
  - Employment tabulations from Statistics Canada's publication "Survey of Employment, Payroll and Hours" are derived from air transport industry classified in accordance with the North America Industrial Classification System (NAICS).
  - "Grand Total, Including Incidental Services" excludes helicopter and hot-air balloon jobs associated with scenic and sightseeing transportation.
- Effective 2000, data for Level IV carriers will no longer be available due to carrier level definition changes implemented by Statistics Canada. Most carriers formerly classified as Level IV now come under Level V, which are not required to report employment data.

1. A residual level of employment calculated as the difference between that level of employment for the Canadian Bus Industry (reported in Statistics Canada's Annual Passenger Bus and Urban Transit Survey), and the NAICS-based employment data for Transit and Ground Passenger Transport and Taxi and Limousine Service (reported in Statistics Canada's Survey of Employment, Payroll and Hours).  
In 2001, a new bus survey introduced by Statistics Canada provides an enlarged coverage of the bus industry and makes irrelevant the calculation of a residual employment value concerning "Passenger Transit".  
2. Employment data that is not assigned to a specific mode and that could be described as multimodal in nature. Includes scenic and sightseeing transport - land and other, support activities - road and other, freight transportation arrangement.

Figures may vary from previous Reports, as adjustments have been made. O&M: Operating and Maintenance.

1 Territorial expenditures estimated by Transport Canada.

2 Estimated transfers as reported by the provinces; assumed to go to local governments.

3 Roads and streets, parking and snow removal; expenditures adjusted to be at least equal to transfers from federal and provincial governments.

4 Federal transfers assumed to be all road related.

5 Expenditures by provincial and local governments adjusted to be at least equal to subsidies reported by transit authorities.

6 Includes overhead expenses and some expenditure on communication at the local level.

p = Preliminary data for 2003 e = estimated N/A = Not available

Note: The available ten-year rates for rail and road differ in the Addendum Table A4-1 to the five-year rates presented in Table 4-1. For rail the ten-year rate excludes yard switching miles and for road, the available ten-year rate is per 10,000 motor vehicle registrations.

*Comparing accident numbers between modes:* The source and criteria for reporting accidents/incidents varies for each mode, therefore the reader should be cautious when making comparisons across modes. The type of risk exposure, frequency and magnitude of an accident, including the impact on public perception of safety, also varies. The TDG program, which includes accidents at the modal transportation facilities, does not cover dangerous goods transported in bulk on ships (as well as by pipeline) and therefore limiting the type of data comparison that can be made of in-transit TDG accidents across modes.

*Comparing rates between modes and data limitations:* The available activity measures (risk exposure) for determining the rate of accidents are also particular to each mode and have their own set of limitations. For marine, data is collected only for commercial vessels over 15 gross registered tonnage and, as well, there have been data collection changes over the years (e.g., in 2000, Statistics Canada made a change to the treatment of domestic tug and barge movements). The *million vessel kilometres* is being used for the ten-year accident rates for marine. For road, the available accident rates are based on the number of registered vehicles, rather than *kilometres*, which is available for recent years only. For aviation, *itinerant movements* (flights between and at the top 100 airports) is more representative of risk exposure (e.g., most accidents occur during take-off or landing). Rail continues to operate in train-miles. The ten-year trend for rail is available per million *main track train-miles*, but does not include *yard switching miles*. The *yard switching miles*, available since 1999, measures activity (exposure to risk) on other than the main track and historically accounts for approximately 50 per cent of the accidents. The approximate exposure/activity level estimates for the transportation of dangerous goods, lack the precision to provide reasonable accident rate trends. This is largely due to the difficulty inherent in isolating dangerous goods commodities.

*Comparing time periods:* The data reported is preliminary for 2003, as accident/incident reports can be received or revised and updated after the annual report is finalized. The difference between the final and preliminary accident totals, has historically been insignificant (e.g., about one per cent) for rail, marine and aviation. For road, collisions reported to the police are collected by the provinces/territories and provided to Transport Canada to develop the national casualty collision statistics. The one calendar year delay is due to the inherent difficulties in handling the collection and processing of high volumes of data (over 600,000 crash cases annually) and the compiling and release of statistics at the jurisdictional and then at the national levels. In addition, the long-term comparisons can be affected to varying degrees by industry, government or system-wide changes (e.g., industry restructuring, such as growth of rail shortlines notably in the mid 1990s and government devolution and commercialization of operations; recent regulatory changes, such as in the TDG accident-reporting requirements; system improvements, including introduction of new technologies).

1 Canadian-registered aircraft, other than ultralights. Accident rates per 100,000 itinerant aircraft movements at top 100 airports.

2 Accidents involving Canadian-registered vessels. Accident rates per million vessel kilometres for commercial vessels of over 15 GRT.

3 Railways under federal jurisdiction. Accident rates per million main track train-miles (excludes yard switching miles).

4 Road statistics relate to 2002 (most recent road safety statistics), and to the 1997 – 2001 five-year averages. Collision rate per 10,000 Motor Vehicle Registrations. Road accidents are casualty collisions, which exclude collisions in which only property is damaged.

5 TDG = Transportation of Dangerous Goods. Fatality data relate to only those deaths attributed to the dangerous goods.

<sup>1</sup> Million train-miles include main track miles and yard switching miles. Numbers are estimated for 2003.

<sup>2</sup> PTM = Passenger Train-Miles; estimated for 2003.

Notes: The reported occurrences cover only the federal jurisdiction. Canada's rail network was restructured in the mid-1990s. In 2003, the rail network accounted for 83 per cent (with 40 federally regulated companies and 42 provincially), while the remaining 17 per cent were under provincial jurisdiction.

Figures are preliminary as of January 16, 2004. Final figures over preliminary and estimated figures historically have changed less than one per cent. Two fatalities and four serious injuries involved in incidents are not included in the Fatality and Serious Injury totals. For accident and reportable incident definitions, see Transportation Safety Board Regulation Web site: <http://www.bst.gc.ca>

Notes:

- Canadian vessel statistics comprise all occurrences where at least one Canadian vessel was involved; whereas Foreign vessel statistics comprise occurrences in Canadian waters where only a foreign-flag vessel was involved.
- The Accident Rate is calculated for accidents of Canadian commercial vessels ≥15 gross registered tons; as vessel activity is captured for these vessel size only.
- For international voyages, vessel kilometres are calculated within the 12 nautical mile limit.
- In the year 2000, Statistics Canada made a change to the treatment of domestic tug and barge movements; caution is advised in comparisons of activity and resultant accident rates to prior years.
- Injuries include both serious and minor injuries.
- Vessels lost include constructive total losses.
- Figures in the above summary may differ slightly from the TSB figures for Accidents Aboard Ship, Fatalities and Incidents, due to a difference in TC interpretation as to the classification of two occurrences involving fatalities.
- For the Transportation Safety Board definitions of reportable accidents and incidents please see <http://www.tsb.gc.ca/en/stats/marine>.

Notes:

- Small vessels are 150 gross registered tonnage (grt) or less. The TSB estimates that the majority of vessels of unknown tonnage are under 15 grt, and these vessels are included.
- Commercial activities include charter, passenger, towing and commerce operations.
- During the year 1999, the TSB commenced to capture the vessel's activity (purpose of voyage) at the time of an occurrence.
- In this table the vessel category was assumed to be the intention of the voyage, when the activity was not reported.
- Ferry/Passenger/Charter includes all vessel categories engaged in this type of activity.

Notes:

- Figures are preliminary as of February 10, 2004.
- It is important to exercise caution when reading the numbers in the air taxi category because of a reclassification in 1999.
- Before 1999, flight training services were classified as air taxi but are now classified in the private/corporate/state aeroplane category.

1 Ultralight Aircraft excluded.

2 As some accidents may involve multiple aircraft, the number of aircraft involved may differ from the total number of accidents.

3 Other: Contains, but is not limited to, organizations that rent aircraft (i.e. flying schools, flying clubs, etc.).

4 Includes gliders, balloons and gyrocopters.

Notes: • Figures are preliminary as of February 10, 2004.

- It is important to exercise caution when reading the numbers in the air taxi category because of a reclassification in 1999.
- Before 1999, flight training services were classified as air taxi but are now classified in the private/corporate/state aeroplane category.
- As some accidents may involve multiple aircraft, the number of aircraft involved may differ from the total number of accidents.
- Other: Contains, but is not limited to, organizations that rent aircraft (i.e. flying schools, flying clubs, etc.).
- Ultralight Aircraft excluded.

2 Source: Transport Canada adapted from Air Movement Statistics (AMS)

- Notes: • Itinerant Movements reflect total movements from top 100 airports where Air Traffic Control Towers and Flight Service Stations are in place.
- 1999 figures are estimated.
  - Accident rate does not include "Other Aircraft Involved".
  - Based on 2002 – 1998 five year average, top 100 airport movements represent 83 per cent of all recorded Itinerant Movements.

Notes:

- The TDG program does not cover dangerous goods transported in bulk on ships or by pipeline.
- Dangerous goods accidents are “Reportable” if they meet the reporting requirements defined in the TDG Regulations. TDG accidents can occur while dangerous goods are being transported, while they are handled, or during temporary storage pending transport.
- “In-transit” accidents include those that occurred during actual transport. “Not-in-transit” accidents are those that took place at facilities where the goods are prepared for transport or stored in the course of transport. Many of these accidents occur in warehouses while the goods are being handled prior to loading or after unloading.
- Minor injuries refer to those injuries that require first-aid treatment, moderate injuries involve emergency hospital treatment, and major injuries require overnight hospitalization.
- The decrease in reportable accidents is largely attributed to changes in the accident-reporting requirements contained in the Clear Language version of the TDG Regulations, which came into force on August 15, 2002. The new requirements are solely based upon the dangerous goods quantity released at the accident.

<sup>1</sup> Revised figures.

<sup>2</sup> 2003 accident data is preliminary based on accidents reported to TDG.

1 Revised figures.

2 2003 accident data is preliminary based on accidents reported to TDG.

3 Seven deaths and 45 injuries were due to a multiple highway vehicle collision in Windsor, Ontario. However, no deaths or injuries were due to the dangerous goods themselves.

4 98 passengers were injured in a train collision with three hopper railway vehicles in Thamesford, Ontario.

5 Total includes deaths and injuries caused by the dangerous goods, as detailed in Table A4-18B.

In addition, the company provides a winter passenger/cargo service between Matane and Cap-aux-Meules under contract with the Province of Quebec.</p>
<p><b>La Société des traversiers du Québec (STQ)</b> Subsidized by the Province of Quebec's transportation ministry, STQ provides five year-round passenger/vehicle ferry services across the St. Lawrence River. STQ is also responsible for three provincially subsidized services operated by private companies between Rivière-du-Loup and Saint-Siméon, Montmagny and Île-aux-Grues, and Cap-aux-Meules and Île-d'Entrée.</p>
<p><b>Ontario Ministry of Transportation</b> The Ontario Ministry of Transportation provides financial support to four year-round ferry operations in eastern Ontario, including services to Glenora, Wolfe Island, Amherst and Howe Islands.</p>
<p><b>Owen Sound Transportation Company (OSTC)</b> The OSTC provides seasonal passenger/vehicle services on Lake Huron between Tobermory and South Baymouth (on Manitoulin Island) from May to mid-October. The company also operates the services on Lake Erie between Leamington/Kingsville and Pelee Island, Ontario, and Sandusky, Ohio, from April through December on behalf of the Province of Ontario.</p>
<p><b>Manitoba Department of Highways and Transportation</b> The Manitoba Department of Highways and Transportation operates seven passenger/vehicle ferries on the province's lakes and rivers, including services to Norway House, Matheson Island and Cross Lake.</p>
<p><b>Saskatchewan Ministry of Highways and Transportation</b> The Saskatchewan Ministry of Highways and Transportation operates 13 seasonal river ferries. Some of the services are in Estuary, Lemsford, Lancer, Riverhurst, Clarkboro, Hague, St. Laurent, Fenton, Weldon, Paynton, Wingard, Cecil and Wollaston Barge.</p>
<p><b>British Columbia Ferry Corporation (BC Ferries)</b> BC Ferry Services Inc. is the largest ferry operation company in North America and operates a fleet of 40 vessels on 26 routes. The company receives a federal grant for the provision of ferry service in coastal waters, as well as provincial subsidies. The company is now an independent, self-financing corporation, with its voting shares owned by the B.C. Ferry Authority and its non-voting shares owned by the Province of British Columbia. The B.C. Ferry Commission regulates the corporation's service levels and rates according to the contract between BC Ferry Services Inc. and the Province.</p>
<p><b>British Columbia's Ministry of Transportation</b> British Columbia's Ministry of Transportation operates the province's 16 inland ferry services, including Adam's Lake, Barnston Island, Glade, Kooteney Lake and Galena/Shelter Bay. The Ministry contracts with two private operators for the provision of two services.</p>

Notes: Aeronautical revenues are generated principally from airlines and other commercial aviation sources, and consist mainly of landing fees and terminal fees, plus the recovery of security costs. Revenues from concessionaire sales (stores, restaurants, etc.), car parking and space rental are considered non-aeronautical. Airport Improvement Fees represent the amount collected. The Rent figures differ from the actual cash received by the federal government due to accrual accounting treatment. In addition to its rent payment in 2002, Aéroports de Montréal repaid \$56.9 million in deferred rent plus interest. The Net Income figures for London and Quebec will not equal those shown in their audited financial statements due to their accounting treatment of Airport Improvement Fees.
