

## Module 6.1.4.5 SPECIFIC ACTION PLAN ELECTRICAL WORK

---

### HEALTH AND SAFETY ACTION PLAN FOR REPAIR AND CONSTRUCTION PROJECTS AT THE JOHN H. CHAPMAN SPACE CENTRE

---

#### 1. Worker's skills

Every worker assigned to this work must satisfy the requirements of the electrical code.

#### 2. Electrocutation

Whenever connecting or installing an electrical system, the worker must ensure there is no voltage in the circuit by cutting the power at the source. The worker must also ensure that another worker cannot reconnect the power by placing a padlock on the power breaker at the source and attaching a tag (describing the type of the work) near the power breaker.

Before reconnecting the power, the worker responsible for the operation must ensure there are no workers still working on that particular system.
