

Marine Environmental Data Service Report for 2001

by

T. Dougherty-Poupore

Marine Environmental Data Service (MEDS), Dept. of Fisheries and Oceans, Station 12082,
200 Kent St., Ottawa, Ont. Canada K1A 0E6 E-mail: dougherty@meds-sdmm.dfo-mpo.gc.ca

Summary

MEDS has the responsibility to be the Regional Environmental Data Center for NAFO, and as such is required to provide an inventory of environmental data collected in the NAFO area annually to the NAFO subcommittee for the environment (STACFEN). This year's report (June 2001) is for the calendar year of 2000. The report includes physical oceanographic inventories of profiles, drifting buoys, currents, waves, tides and water levels. It is important for STACFEN to encourage members to send data and information to the designated data centre in order to get significant return for NAFO.

Also included in this report are some of the recent activities at MEDS of interest to NAFO, such as:

- Archival of P-ALACE Float Data;
- Underway Sea Surface Salinity Project
- New CD-Roms;
- Atlantic Zone Monitoring Program.
- Ocean Portal

Background

MEDS has been recognized since 1975 as the Regional Environmental Data Center for ICNAF and subsequently for NAFO. As the regional center, MEDS is required to report on these data annually at the June Meeting of STACFEN, the Standing Committee of Fisheries and the Environment. In order for MEDS to carry out its responsibility of reporting to the Scientific Council, the Designated National Representatives selected by STACFEN are requested to provide MEDS with all marine environmental data collected in the Northwest Atlantic for the preceding years.

Provision of a meaningful report to the Council for its meeting in June 2001 required the submission to MEDS of a completed oceanographic inventory form for data collected in 2000, and oceanographic data pertinent to the NAFO area, for all stations occupied in the year prior to 2000. The data of highest priority are those from the standard sections and stations, as described in NAFO SCR DOC., No. 1, Serial N 1432, 9p.

Contacting MEDS

Data that have been formatted and archived at MEDS are available to all interested scientists on request. Requests can be made by telephone (613) 990-0243; by internet e-mail to services@meds-sdmm.dfo-mpo.gc.ca, by completing an on-line order form on the MEDS WWW: www.meds-sdmm.dfo-mpo.gc.ca, or by writing to Services, Marine Environmental Data Service (MEDS), Dept. of Fisheries and Oceans, Station W 82, 12th Floor, 200 Kent St., Ottawa, Ont. Canada K1A 0E6.

Recent Activities

1. Archival of Argo P-ALACE Float Data

Argo is a program to deploy profiling floats on a 3 by 3 degree grid in the oceans of the world. Each float will sample both T and S from 2000m to the surface every 10 days. Data will be relayed ashore and be distributed both on the GTS and from two Internet servers within 24 hours of the float reaching the surface. A number of countries are actively developing their processing systems for this program, and Canada is one of them. MEDS role is to carry out the processing of the data received from Canadian floats, to distribute the data on the GTS, to contribute the data to the Argo servers and to handle the delayed mode processing as well. We are developing a web site that will contain information about Canadian floats as well as some general information and statistics about the global array. MEDS program will be operational at or before the end of August of this year. General information will also be available from an Argo Information Centre being set up in Toulouse in conjunction with the SOOPIP and DBCP technical coordinator.

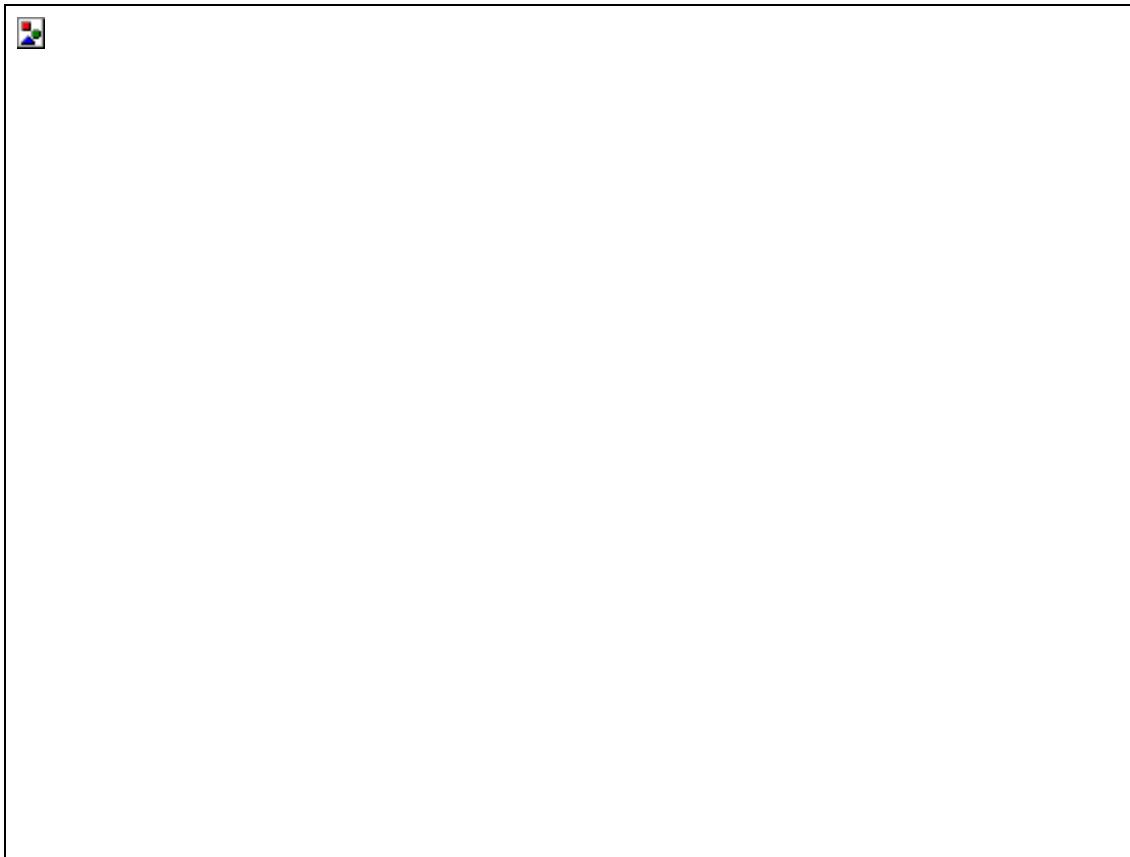

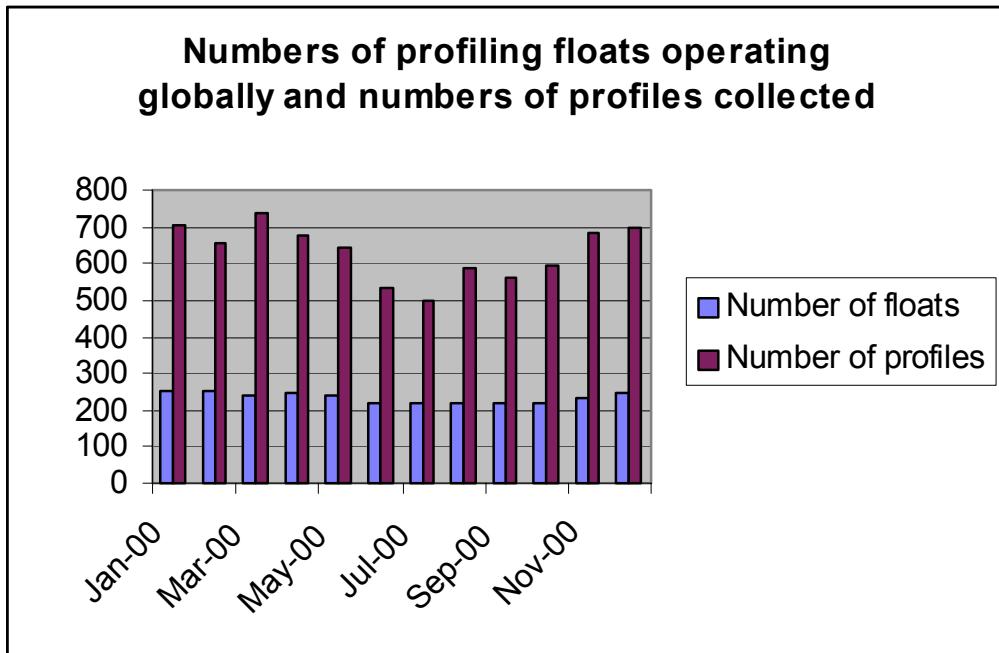

Figure 2:

2. Underway Sea Surface Salinity Project

At the IODE meeting held in November, 2000, a pilot project was initiated to handle surface salinity data collected while a platform is underway. Draft terms of reference were prepared which included the goals of acquisition, quality control, archiving in standard format, and dissemination of the data. There will be cooperation needed between data gathers, centres and scientists using such data to ensure that proper care is taken in processing these data. A steering group initially chaired by IFREMER/SISMER and consisting of six other members (Canada, UK, Greece, Germany, US, ICES) was set up. The first meeting is planned for sometime in late 2001.

3. New CD-Roms

WOCE: The 2nd edition of the WOCE CDs was issued in June of 2000 and are available from the WOCE International project office. The SVP and UOT CDs are available from MEDS. The next and final version will be issued in September 2002.

International Arctic Buoy Programme (IABP): MEDS produced a CD that includes all GTS and interpolated data from 1979 to 1999 for the Arctic. The CD is distributed through MEDS.

Canadian Joint Global Ocean Flux Study (JGOFS): MEDS acts as the Canadian data centre for the Joint Global Ocean Flux Study (JGOFS). The acquired data from Canadian regional institutes is available on a CD-ROM and distributed through MEDS.

4. Atlantic Zone Monitoring Programme (AZMP)

DFO has funded a programme for the East Coast of Canada called the Atlantic Zone Monitoring Programme. The programme's activities include regular sampling of 6 fixed stations and occasional cruises in the AZMP area to collect physical, chemical and biological data. As part of MEDS' activities in the data management team, MEDS continues to build and maintain the AZMP web site. MEDS regularly receives physical and chemical data collected as part of the programme from IML, NWAFC, and BIO and posts it on the web site. Physical and chemical data from 1999 to the present are currently available on the website for 6 fixed stations and 13 sections. Climate indices have also been added to show long term trends of physical variables. Water level data for 9 gauges ranging from 1895 to the present are also available. Biological data will be stored in a nationally distributed database (BIOCHEMA) that is presently being developed at BIO. In the mean time, graphical representations of biological data (phytoplankton) are currently being displayed on the web site but the data are not available. The AZMP web site address is:
http://www.meds-sdmm.dfo-mpo.gc.ca/zmp/main_zmp_e.html

5. Ocean Portal

MEDS is involved in two projects that will make data and visualization tools available through the Internet. The first stems from our participation as a WOCE Data Assembly Centre (DAC). Each DAC has been asked to install a Distributed Ocean Data System server to make the data they manage available on the Internet. MEDS intends to do so. The second project is a partnership with the US NODC, PMEL (in Seattle) and U Hawaii to provide visualization tools and data through a development called the Climate Data Portal. Both of these projects use netCDF as the file format.

Data Inventories:

Ocean Subsurface Data

Vertical profiles are collected worldwide with water sampling bottles and electronic instruments. These subsurface measurements include temperature, salinity, oxygen, a wide variety of nutrients and chemicals, and biological and other physical variables. Derived parameters, such as sigma-t and geopotential anomaly can be computed upon request.

MEDS becomes aware of surveys of the physics and chemistry of the water column, directly, by delivery of these data to MEDS from responsible institutions and the IGOSS reporting system, and, indirectly, from Cruise Summary Reports and other reports of ocean cruise activity. Table 1a identifies data collected in the NAFO area in 2000 but not yet received at MEDS. Table 1b list data collected in the NAFO area in 2000, received at MEDS but not yet archived. Table 2 gives a summary of the MEDS IGOSS archive for data received during 2000. Thermosalinograph data are now being included in the report as table 2b. Table 3 gives a summary of the delayed-mode data received for 2000, which have been processed and archived. Table 4a list data processed

and archived, in the past year, that were in the NAFO area, but for years prior to 2000. Table 4b lists those datasets that were received in the past year for years prior to 2000 but have not yet been processed.

Ocean subsurface data is processed at MEDS in much the same way for each of the data sets described in tables 2 and 3. Electronic files are converted from a wide range of formats, into a common Ocean's format. Quality control is carried out by a combination of specially designed software and trained personnel. The quality control has four main functions. The first is to check and ensure that each data message is properly formatted. The second is to identify duplication, and select the best version of a message, based on data type, source of the data, and general qualities in analysis and reporting of the observations. The third check identifies and, if possible, corrects the date/time and geographical positioning information of each message using computer tests and visual inspection of the track for each cruise. The final quality control procedure uses a series of algorithms to find and flag common instrument failures found in profiles of subsurface measurements. Each subsurface profile of temperature, salinity and other subsurface constituents, is also visually inspected using software to plot the data and allow a technician to set quality flags to individual points on a profile.

The tables show summaries of data for the NAFO area. Much of the data MEDS has been aware of, for 2000, has been processed and made available to scientists conducting environmental assessments of the NAFO area. Table 3 includes data from net mounted CTDs.

Table 1a: Data collected in the NAFO area in 2000, not yet received at MEDS.

Inventory of Oceanographic Stations in the Northwest Atlantic

Year: 2000

Country: Germany

| NAFO STANDARD SECTION | | | | | | | |
|-----------------------|----------|---------------|-----------|----------|------|------------|--|
| Ship Name | Sub-area | Date Span | Name | Stations | Type | Parameters | |

Thermosalinograph data:

A number of vessels have been equipped with thermosalinographs to collect surface temperatures and salinities. These data are transmitted via satellite and GTS and captured and archived at MEDS. The sampling locations in 2000 and number of observation locations in NAFO area for each month are given in the following plot and table.

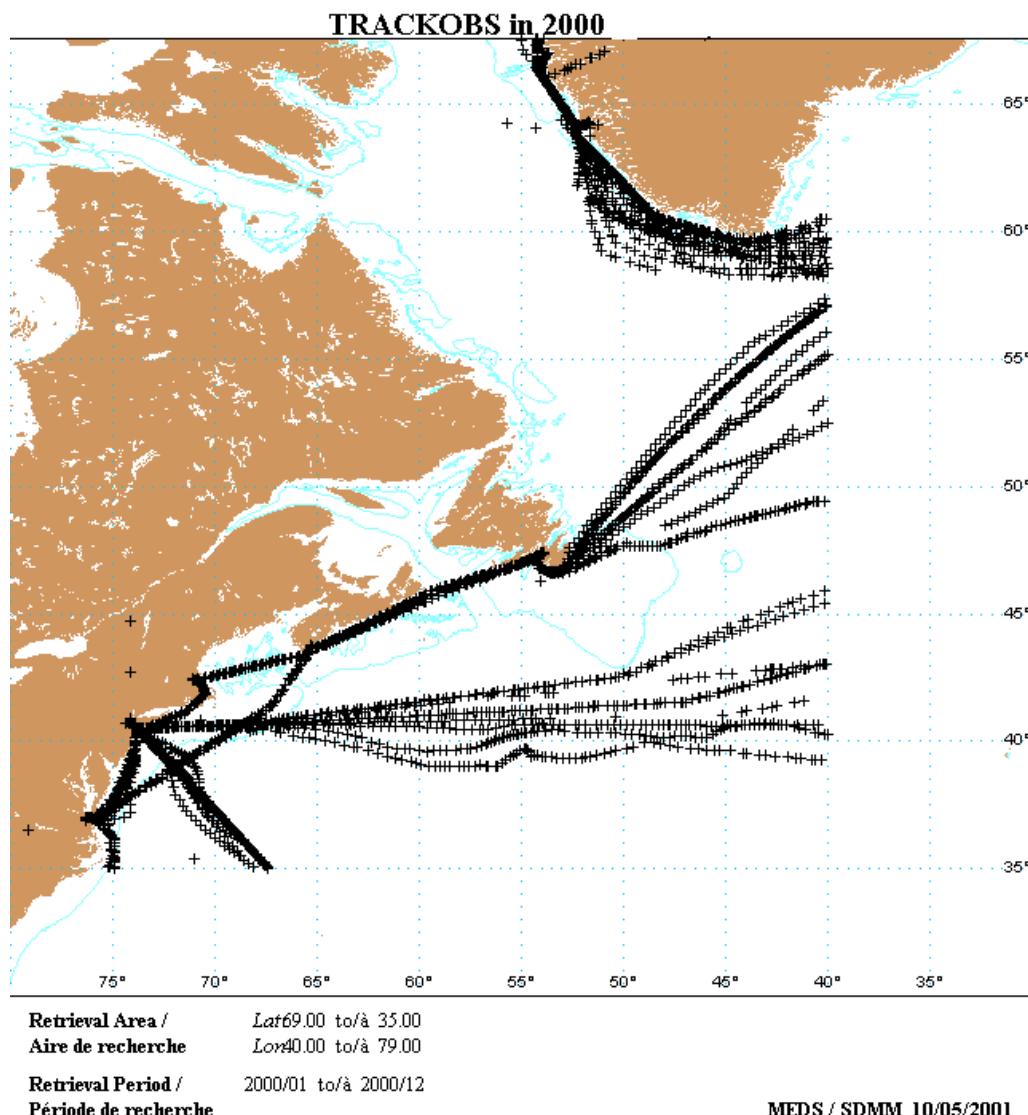

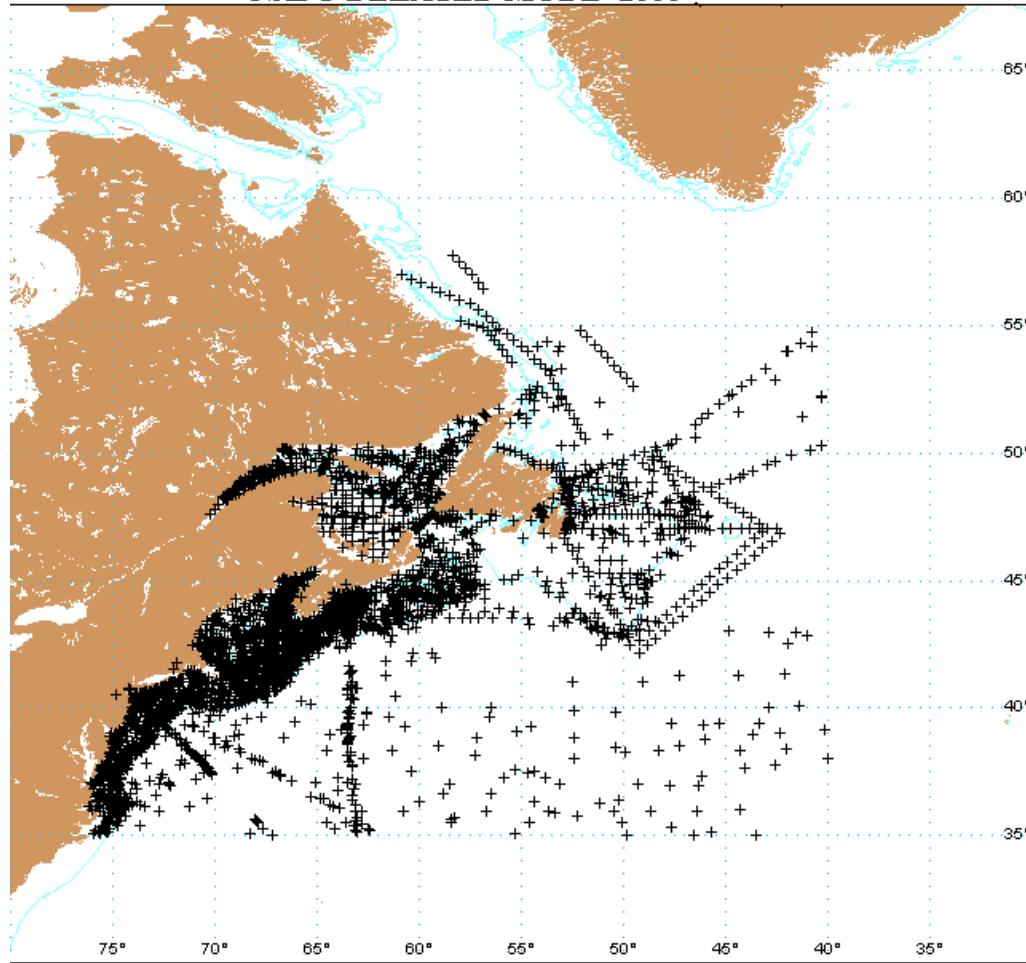

Table 2b TRACKOB data received during 2000

Total = 5590 stations

| Ship Name | Country | Call Sign | Cruise Period | TRACKOB | NAFO Subarea |

TABLE 4b HISTORICAL DATA RECEIVED BUT NOT ARCHIVED.

MEDS just received the following historical data from NAFC for the NAFO area:

Sentinel fisheries 1995-1999.

1995-1998 data list as vessel id 41. Each fisherman listed as a separate cruise number.
Multiple years data for each.

1999, fishermen assigned individual ship ids, AA-AZ, 1 cruise id per year for each.

Dr. Brian Nakashima, Caplin beach stations, Ship id 51705.

Dr. Don Diebel, Ocean Sciences Center, MUN.1988-1997 ctd data using Seabird model SBE-19 and SBE-25 instruments, equipped with various sensors. Listed as vessel id 93, cruises 001-012.

Drifting Buoy (DRIBU) Data

Drifting buoy (or DRIBU) data are received at MEDS over the GTS. Measures taken to assure its quality are much the same as those for the ocean subsurface data described previously. DRIBUS report via satellite, at rates of up to every 15 minutes. These messages are for format errors, and reformatted for quality control procedures and subsequent archival. Checks, flags and possible corrections to the data are carried out by trained personnel, using a system of MEDS software, which organize, analyze and display plots of the data. Quality checks use algorithms which check drifting speed and position, and ranges of sea surface temperatures and sea level pressure. The range checks include a comparison to NOAA's Ashville SST Climatology (2.5x2.5 degrees and monthly). Duplicates are checked, which is important for discriminating between data received directly from buoys and messages routed through other data centers. Lower quality data (which are this type of duplicate) are flagged as such.

MEDS, as the RNODEC for drifting buoy data, has holdings of over 13 million unique DRIBU records for the world's oceans, from 1978 to 2001, and growing at a rate of more than one million messages per year. The message is comprised of the buoy position and some of the following parameters: surface and subsurface water temperature, air pressure and temperature, wind speed and direction.

Table 5 lists data collected by Drifting Buoys in the NAFO Area in 2000. Two maps of DRIBU tracks for the entire North Atlantic, processed and archived by MEDS in 2000, are shown in the figures.

Table 5 figure 1: DRIFTING BUOY DATA ARCHIVED IN THE NAFO AREA, JANUARY TO JUNE 2000

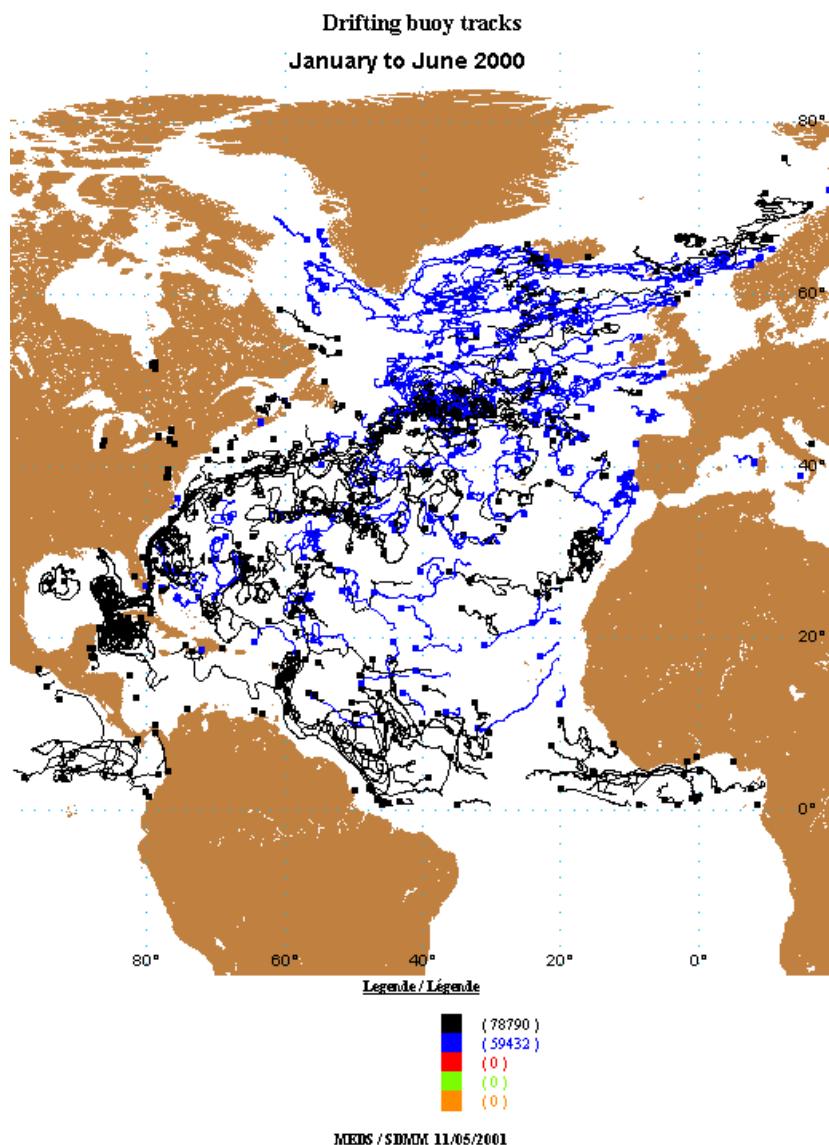

Table 5 figure 2: DRIFTING BUOY DATA ARCHIVED IN THE NAFO AREA, JULY TO DECEMBER 1999

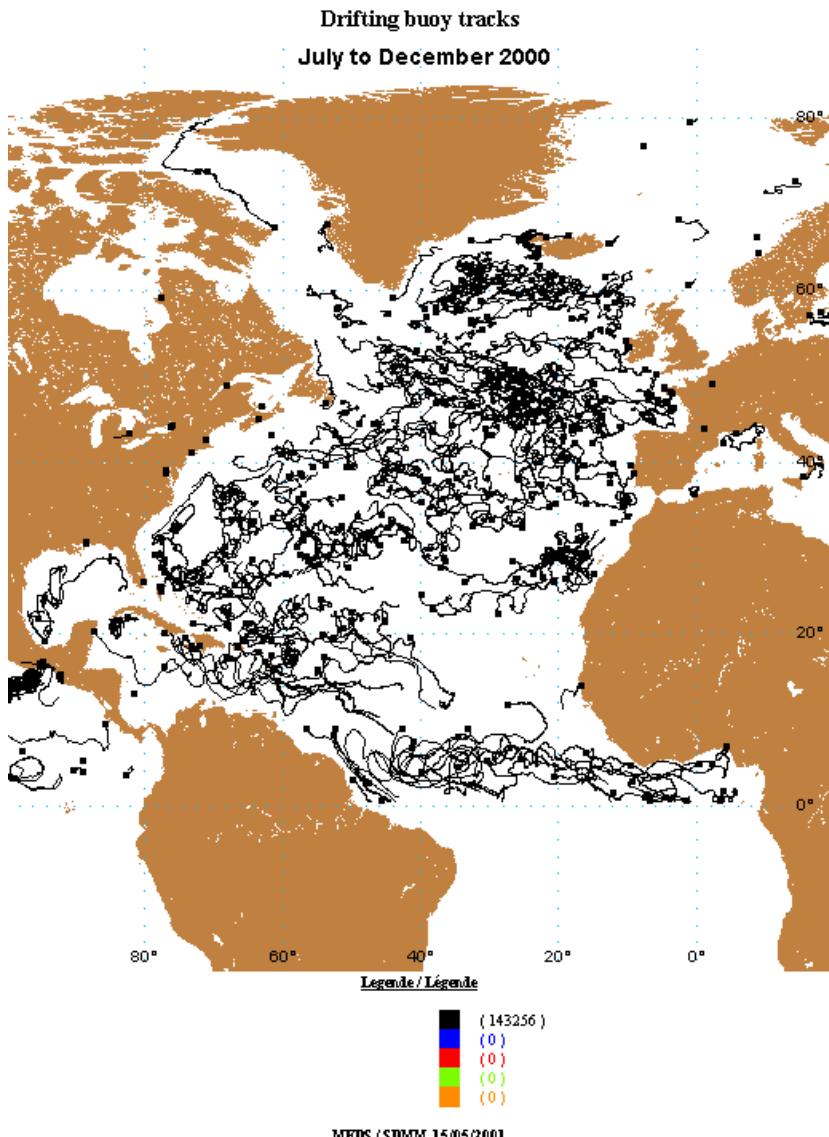

Table 5: Data Collected by Drifting Buoys in the NAFO Area in 2000
Number of Buoys = 141 and Buoy Days = 8460

Current Meter Data

Current meters have been deployed in the NAFO area for many years. These data are processed and archived at The Bedford Institute of Oceanography (BIO), Dartmouth, Nova Scotia and are available via the WWW: www.maritime.dfo.ca/science/ocean/welcome.html

Table 6: Current Meter data archived at BIO for 2000

Wave Data

MEDS continued to process and archive operational surface wave data on a daily basis around Canada. One-dimensional and directional wave spectra, calculated variables such as the significant wave height and peak period, concurrent wind observations if reported, and the raw digital time series of water surface elevations are stored. The data are quality controlled with a visual inspection and with MEDS software to set flags on data showing instrument failures.

Table 7 lists wave measurement data in the NAFO area for 2000. Historical wave data are available on a CD-Rom.

WAVE STATIONS IN THE NAFO AREA FOR 2000

Wave Buoys in the NAFO

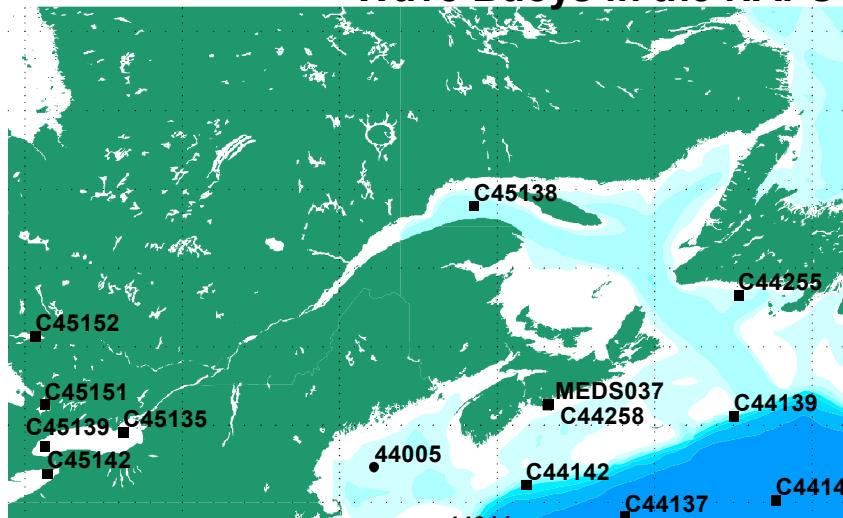

Table 7: Wave spectra in the NAFO area for 2000 Total Spectra = 114292

Tide and Water level Data

MEDS continued to process and archive operational tides and water level data that are reported on a daily to monthly basis from the Canadian water level network. MEDS archives observed 15-minute heights, hourly heights and monthly instantaneous extremes collected around Canada. Approximately 70,000 new readings are updated every month from the network. The historical tides and water level data archives presently hold over 30 million records with the earliest dating back before the turn of the century.

Table 8 lists tide and water level data in the NAFO area for 2000. These data are quality controlled using MEDS software. A complete inventory of tide and water level data holdings is available on our website: www.meds-sdmm.dfo-mpo.gc.ca
