Foreword

I am very pleased to present *The Labour Market in the Montréal Region: Job Prospects 2005-2009*, prepared by Emploi-Québec's regional branch in Montréal. This document provides the results of analyses carried out on more than 500 trades and occupations, many of which will offer good job prospects between now and 2009. It discusses the labour market situation anticipated for the different occupational groups for the period up to 2009 on the basis of Emploi-Québec's forecasts, and includes tables listing all the trades and occupations as well as their employment prospects. Finally, it takes a look at the trends and changes shaping the urban landscape of trades and occupations in Montréal.

I am confident that this tool, prepared by our team at the Direction de la planification, du suivi et de l'information sur le marché du travail, will offer all Montréal residents quality information and will help promote a balance between labour supply and demand.

The Labour Market in the Montréal Region: Job Prospects 2005-2009 can be consulted at local employment centres or on our Web site at www.emploiquebec.net/publications/2 tendances/Persp prof 2005-2009/PPMTL20052009Ang.pdf (a French version is also available).

Anticipated Trends in the Montréal Labour Market According to Skill Level and Skill Type

According to Emploi-Québec's most recent estimates for the Montréal region, Montrealers' level of employment will rise on average by 1.5% a year between 2004 and 2009, a rate of growth slightly above that of Québec as a whole (1.3%). A total of 71,000 residents will get new jobs over five years, that is, 28% of all new jobs in Québec (251,000).

Sectors of Economic Activity

As the lion's share (80%) of Montrealers' jobs are in the service sector, most new jobs resulting from economic growth over the five forecast years will be in this sector. Professional, scientific and technical services, health care, social assistance, and the retail trade will top the list for job creation.

In commodities, jobs will lose ground due to the slowdown underway in construction and in certain manufacturing industries, especially clothing, which is heavily concentrated in Montréal. However, the vitality of certain other manufacturing industries will cause commodities as a whole to enjoy slight job growth. Food, beverages and tobacco manufacturing will

contribute the greatest number of new jobs by a wide margin. However, the best job growth performance will be in the machine manufacturing industry, which will benefit from industry's need to boost investment in machinery and equipment in order to improve productivity. Computer, electronic and electrical products and transportation material should also experience above-average job growth during the forecast period.

Manpower Replacement

In addition to the new jobs that will be created in the next few years, many positions will open up every year as people withdraw permanently from the labour market (retirement or death) and leave their iob for another (interoccupational mobility). Starting this year, the methodology used in our forecast model has been changed to take into account significant replacement needs that may give rise to interoccupational mobility. However, the new model no longer forecasts replacement needs by occupation for the retired and deceased contingent only, but Régie des rentes du Québec projections can provide a sound estimate.

According to an actuarial analysis at December 31, 2003, the number of new pension fund beneficiaries will reach approximately 90,000 Montrealers for the 2005-2009 forecast period.

Positions generated by economic expansion and replacement needs will therefore become available for people seeking jobs and will create opportunities in several types of occupations.

Occupations by Skill Level

As Chart 1 indicates, in 2004, a larger proportion of the labour force in Montréal than in Québec as a whole worked in occupations requiring high skill levels (management and professional). However, the majority of jobs held by Montrealers (57.5%) require technical or intermediate skill levels

However, relatively speaking, elemental level skills (requiring no particular qualifications) will be the most highly sought during the 2005-2009 forecast period. At the other end of the spectrum, professional level skills (usually requiring a university degree) are a close second. One explanation for the fact that

diametrically opposed skill levels will be the most in demand¹ is that high-level skills are increasingly called for in the labour market and jobs requiring very few qualifications are often entry-level positions in which there is high interoccupational mobility.

Positions requiring technical and intermediate skill levels will, nonetheless, account for more than half of the jobs in future, because of the volume they represent. Among technical level jobs, the demand will be higher for positions calling for college training than those requiring secondary schooling.

In all, 275 of the 520 occupations that figure in Emploi-Québec's compendium will offer Montrealers fair, good or even very good employment prospects between 2004 and 2009. These positive prospects

applied to three quarters of the jobs held by Montrealers in 2004.

Occupations by Skill Type

Chart 2 shows the occupational structure of the Montréal region and Ouébec as a whole. Skill types are grouped into ten main categories of occupational activity. There is a larger concentration of people in Montréal than in Québec overall working in management; business, finance and administration; natural and applied sciences; social science, education, government services and religion; and art, culture, recreation and sport. Close to half (43.3%) of active Montréal residents. however, hold jobs in sales and service, in business. finance and administration

Although a higher demand for all skill types is anticipated, five occupational categories stand out from the others.

Occupations in the arts, culture, recreation and sport will post the highest labour demand rate. In relative terms, the second-highest scorers will be jobs related to sales and service, at par with those in the field of health. Occupations connected to natural and applied sciences will also record an above-average labour demand rate.

Given the imposing share of jobs represented by sales and service and business, finance and administration, these two categories will offer the largest number of opportunities between 2004 and 2009.

^{1.} The labour demand rate is the ratio between the labour demand forecast between 2004 and 2009 and employment level in 2004. Thus, for 2005, the labour demand rate forecast is the demand anticipated in 2005 relative to the number of jobs in 2004. This principle also applies to the other variables forecast and the other years covered, which is why job prospects are for 2005 to 2009, but the horizon considered is from 2004 to 2009.

CHART 1 : RELATIVE JOB SHARE (%) BY SKILL LEVEL, MONTRÉAL REGION AND QUÉBEC AS A WHOLE, 2004

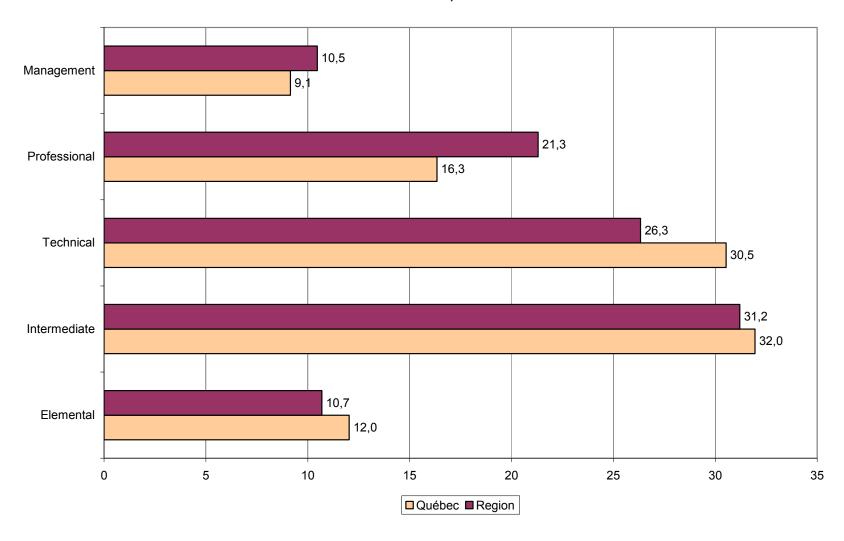

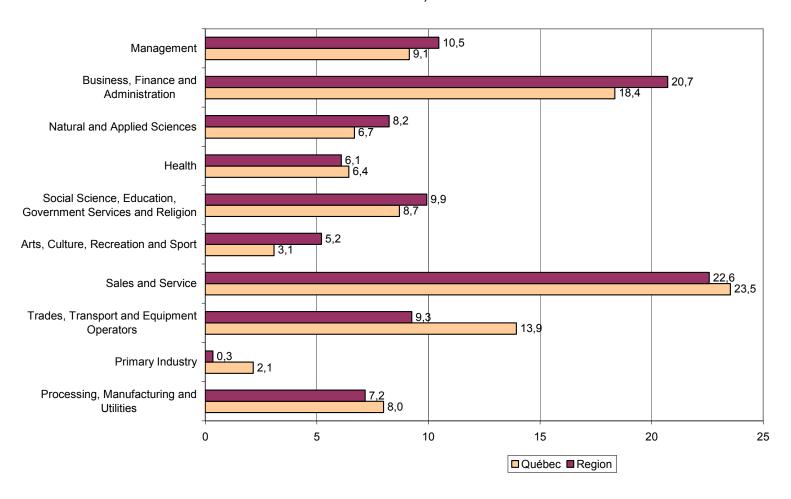

CHART 2 : RELATIVE JOB SHARE (%) BY SKILL TYPE, MONTRÉAL REGION AND QUÉBEC AS A WHOLE, 2004

Definition of Variables, Methodology and Interpretation of Results

In order to have a clear idea of interoccupational mobility, which is an important factor in the profile of manpower needs, our methodology for estimating the labour demand rate has been changed. The overall result is higher demand rates than those posted using the former method for all skill levels and, in particular, for intermediate or elemental level occupations.

Occupational Groups (NOC and Occupational Titles)

The classification and definition of the occupational groups in this publication are based on the National Occupational Classification (NOC) established by Human Resources Development Canada (HRDC).² The NOC is a hierarchical occupational classification system made up of three levels. It includes 26 major groups (assigned a two-digit code) broken down into 140 minor groups (assigned a three-digit code), which in turn are broken down into 520 unit groups (assigned a four-digit code).

Skill level and skill type are the two main criteria used in the NOC.

Skill Level

The skill level generally refers to the amount and type of education and

Emploi-Québec.

SKILL LEVEL **EDUCATION/TRAINING** OTHER CRITERIA Not a determining factor in most cases. Experience in the relevant field. Management ♦ Financial capital. University degree (bachelor's or master's degree or doctorate). **Professional** ◆ Two to three years of post-secondary Occupations with supervisory **Technical** training at a community college, responsibilities are also assigned to CÉGEP or technological institute, or skill level B. Occupations with significant health Two to four years of apprenticeship and safety responsibilities (e.g. training, or firefighters, police officers and ♦ Three to four years of secondary school certified nursing assistants) are also training and more than two years of onassigned to skill level B. the-job training, off-the-job training or specific work experience. ♦ One to four years of secondary school Intermediate training. or Up to two years of on-the-iob training. off-the-job training or specific work experience. D ♦ Short work demonstration or on-the-job **Elemental** training, or No specific educational requirements. Source: Human Resources Development Canada², National Occupational Classification 2001 Edition and

Skills 2 Now Human Resources and Development Canada (Service Canada)

training required to enter and perform the duties of an occupation. The experience required, the complexity of the tasks and the responsibilities inherent in the position are also analyzed in comparison with other positions to establish the skill level for the position.³

Four skill levels, and "management," are used in the NOC:

- 1 Professional
- 2 Technical
- 3 Intermediate
- 4. Elemental

The chart on the previous page defines these five skill levels by outlining the education normally required to enter occupations in them.

Skill Type

The skill type generally refers to the type of work performed; however, the NOC includes other factors, such as the educational background required for entry into the occupation, and the industry of employment in cases where experience

within an internal job ladder is required for entry.⁴

In addition to "management", nine categories of skill types are given in the NOC:

- 1. Business, Finance and Administration
- 2. Natural and Applied Sciences
- 3. Health
- 4. Social Science, Education, Government Services and Religion
- 5. Art, Culture, Recreation and Sport
- 6 Sales and Service
- 7. Trades, Transport and Equipment Operators
- 8. Primary Industry
- 9. Processing, Manufacturing and Utilities.

Estimated Employment (2004)

The estimated employment levels in 2004 correspond to the number of jobs for each occupational group in the year serving as the base year for Emploi-Québec's forecasts. These figures are determined according to the distribution of jobs forecast per industry in 2004 by Emploi-Québec primarily on the basis of the estimates in Statistics Canada's *Labour Force Survey*.

Employment levels are then broken down into occupational groups according to the occupational structure of industries in the 2001 census, which gives the proportion of jobs represented by each industry in the different occupational groups established in the NOC. The occupational structure of 2001 has been updated and adjusted according to the evolution of jobs per occupation as indicated in the *Labour Force Survey*.

Estimated employment corresponds to the number of persons residing in a region who hold a job, regardless of the region in which their place of work is located. Thus, when a regional labour market covers two or more regions (as is the case in Montréal, Québec City, Trois-Rivières and Ottawa), people frequently hold a job in an administrative region other than their own. The employment prospects for such regions can depend on the economic activity of an adjoining region.

The estimated employment levels for the different occupational groups must be considered approximate, with a margin of error that may be large, particularly in cases where the number of jobs is small. They must be considered only as an indication of the relative size of the occupational group.

^{3.} Human Resources Development Canada, National Occupational Classification 2001 Edition, Description of Occupations, Training Tutorial, p. 4

^{4.} Ibid, p. 3

Average Annual Income of Full-Time Jobs (2000)

The average annual income of full-time jobs comes from the only available source, the 2001 census.

The average annual income of full-time jobs in this document corresponds to the average salary earned in 2000 by all persons holding a full-time job in the occupational group. This figure does not account for any salary differences due to the number of years of experience. Jobentry income is generally lower. Average annual income includes salaries and wages paid before deductions, the net incomes of non-agricultural unincorporated businesses, the net incomes of occupations, and the net incomes of self-employed agricultural workers. The average annual income of full-time workers in all occupational groups in Ouébec was \$36,200.

Labour Demand Rate Forecast for 2004 to 2009⁵

Labour demand refers to the demand for jobs (increase or decrease) determined by economic conditions and the demand for jobs owing to retirement and death and interoccupational mobility.

The labour demand rate forecast is broken down into the following four categories:

Nil or negative

The labour demand rate forecast for Québec between 2004 and 2009 is equal to or less than zero.

Low

The labour demand rate forecast for Québec between 2004 and 2009 is greater than zero but less than 19.6%.

Average

The labour demand rate forecast for Québec between 2004 and 2009 is equal to or greater than 19.6% but less than 30%

High

The labour demand rate forecast for Québec between 2004 and 2009 is equal to or greater than 30%.

^{5.} The labour demand rate is the ratio between the labour demand forecast between 2004 and 2009 and employment level in 2004. Thus, for 2005, the labour demand rate forecast is the demand anticipated in 2005 relative to the number of jobs in 2004. This principle also applies to the other variables forecast and the other years covered, which is why job prospects are for 2005 to 2009, but the horizon considered is from 2004 to 2009.

Estimated Unemployment Rate for 2004

The estimated unemployment rate for 2004 is the ratio of the number of unemployed persons to the active working population. The number of unemployed persons has been calculated according to the total number of unemployed persons in 2004, determined by Statistics Canada's *Labour Force Survey*. This number is then broken down into the different occupational groups on the basis of the data taken from Statistics Canada's 2001 census and the changes that took place between 2001 and 2004 according to the *Labour Force Survey*.

The estimated unemployment rate in Québec in 2004 is broken down into the following three categories:

Low

The estimated unemployment rate is 5.7% or lower.

Average

The estimated unemployment rate is between 5.7% and 12.9%

High

The estimated unemployment rate is 12.9% or higher.

	LEVELS OF OCCUPATIONAL PROSPECTS
Very good	In light of the changes in the unemployment situation and the labour demand forecast at the start of the period, the potential for entry into the labour market is much greater than that forecast for all occupations in Québec.
	This analysis should not, however, be interpreted as a guarantee of jobs in any specific occupational group.
Good	In light of the changes in the unemployment situation and the labour demand forecast at the start of the period, the potential for entry into the labour market is greater than that forecast for all occupations in Québec.
	This analysis should not, however, be interpreted as a guarantee of jobs in any specific occupational group.
Fair	In light of the changes in the unemployment situation and the labour demand forecast at the start of the period, the potential for entry into the labour market is comparable to that forecast for all occupations in Québec.
	Although the persons in these occupational groups will face strong competition, they can still be optimistic about finding a job, provided they adopt an appropriate job search strategy.
Limited	In light of the changes in the unemployment situation and the labour demand forecast at the start of the period, the potential for entry into the labour market is less than that forecast for all occupations in Québec.
	Although the persons in these occupational groups will face strong competition, they can still be optimistic about finding a job, provided they adopt an appropriate job search strategy. This assessment should thus not be interpreted as meaning the total absence of job openings.
Very limited	In light of the changes in the unemployment situation and the labour demand forecast at the start of the period, the potential for entry into the labour market is far less than that forecast for all occupations in Québec.
	Although the persons in these occupational groups will face strong competition, they can still be optimistic about finding a job, provided they adopt an appropriate job search strategy. This assessment should thus not be interpreted as meaning the total absence of job openings.
NP	For some occupational groups, no analysis of prospects has been presented. This information is not published (NP) for those groups for one of the following reasons: small number of jobs, lack of qualitative information, lack of a labour market.

Prospects

The approach used to establish occupational prospects is based on a comparison made between the estimated labour demand (the range of needs to be met) and the estimated number of unemployed persons (competition among persons for the available jobs). The intersection of these two factors provides information on the potential for entry into the labour market.

The approach involves using a statistical grouping method, namely a variance analysis, to break down the prospect indicator into five categories. A qualitative analysis is then used to assign categories to the occupational groups. This qualitative analysis takes into account, among other things, key industry investments, massive layoffs and the latest developments in specific operational indicators. These developments include changes in the number of employment insurance and employment assistance recipients per occupation and the results of labour market integration surveys of recent graduates by Québec's Ministère de l'Éducation, du Loisir et du Sport. Studies and surveys of the situation in certain occupations are also taken into account.

Five levels of occupational prospects have been established to determine the potential for entry into the labour market for the occupational groups (see chart).

Interpretation of Results

Despite its value to users, any estimate of occupational prospects has limits that require caution in the interpretation of results. While we can identify a series of limits which, taken individually or together, can influence the results, we cannot measure the impact of these limits on the quality of the occupational forecast.

However difficult these limits make predicting labour supply and demand, it is essential to make such forecasts. But because of these limits, our forecasts must be considered trends. That is why the main results are presented in the form of categories, not quantified data. Also, these results must be compared with other information, such as the specific skills and abilities required by the labour market, users' own qualitative knowledge of the labour market, and information users receive from labour market professionals and other sources.

According to our estimates, this occupational category accounted for about 95,000 Montrealers' jobs (10.5%) in 2004, which, in relative terms, was higher than in Québec as a whole (9.1%).

In the next few years, relatively speaking, economic expansion should not generate very many new jobs in this occupational group. With an average annual growth rate markedly below the average for all occupations, this group's job share will even tend to decrease.

This category includes legislators as well as senior and middle managers.

Job opportunities will arise primarily from the need to replace managers who are retiring or changing jobs. Since several years' experience are usually required for a managerial position, the average age is relatively high. In the 2001 census, one third of managers were 55 years of age or older. We can therefore expect that many of them will be retiring in the years to come.

Thanks to an unemployment rate that is among the lowest of all occupational groups in 2004, management offers sound job prospects. Of the 44 occupations in this group, 19 have fair prospects and 14, good prospects. No jobs have limited or very limited prospects. ⁶

For legislators and senior managers, no analysis was carried out since the methods for filling these positions differ too greatly from those generally used in the labour market.

This category includes occupations related to the provision of business and financial services, administrative and regulatory services, and office supervisory and support services. Some occupations in this category are specific to business and finance; however, most are found in all industrial sectors.

With more than 188,000 jobs in 2004, this occupational group has the second largest share of Montrealers' jobs, after sales and service. One person in five (20.7%) of the Montréal labour force works in this category—a rate that is higher than for Québec as a whole (18.4%).

Since 1987, the number of jobs in business, finance and administration has tended to decrease. This trend will continue between 2004 and 2009, with an annual job growth lower than the average for all occupational

categories. Despite high replacement needs for the next few years, the overall demand will be below the average for all occupational categories. However, given the size of this sector, the outlook for a number of occupations is bright.

This group includes a wide range of technical and intermediate level jobs, which do not normally require a university degree. It benefited from an unemployment rate generally below the labour market average in 2004; as a result, 43 of the 56 occupations

enjoy relatively good prospects: 28 have fair prospects, 12 good, and 3 very good.

The professional and technical occupations generally have the best prospects, while several intermediate occupations have good or fair prospects, including customer service, information and related clerks (1453), who often work at call centres, and collectors (1435).

Natural and Applied Sciences and Related Occupations

This category encompasses professional and technical occupations in the sciences, including physical and life sciences, engineering, architecture and information technologies.

Close to 75,000 Montrealers worked in the natural and applied sciences in 2004. This number represents 8.2% of all Montrealers' jobs. More people in the Montréal labour force than in Québec as a whole (6.7%) work in this area

The natural and applied sciences are the groups that have enjoyed the strongest growth since 1987. This upswing should continue in the coming years because these groups will benefit most from the economic growth forecast for the 2005-2009 period. In fact, labour demand in the natural and

applied sciences is expected to rise above the average for all occupational groups.

About two thirds of the jobs in this category require professional skill levels, while the remaining one third calls for technical skills. Since the natural and applied sciences generally require higher qualifications, the overall unemployment rate for this group is lower than that for groups as a whole. Most of the occupations in this category therefore offer good prospects. Twenty one of the 63 occupations in this group could not be analyzed—and thus the prospects could not

be published—because of the small number of jobs in several of the specialized fields. Of the 42 remaining occupations, 18 have fair employment prospects, 19 good, and 4 very good. Only one occupation has limited prospects—air pilots, flight engineers and flying instructors (2271)—because of a decrease in the demand.

The occupations with the best job prospects are chemists (2112), civil engineers (2131), aerospace engineers (2146) and land survey technologists and technicians (2254).

Health

Estimated at more than 55,000 in 2004, the jobs held by people working in health represent 6.1% of all Montrealers' jobs and 6.4% of all those in Québec as a whole.

Affected by the government's deficitreduction measures of the mid-1990s, the labour force in the health sector has grown very little since 1987. However, in the next few years, many new jobs will have to be created to meet the growing needs of the aging population; the rise in employment in health is thus expected to be greater than for all occupational groups. Given the significant replacement hiring needs due to expected retirement and interoccupationl mobility, overall labour demand in health will be above average.

Health workers enjoy the lowest unemployment rate of all occupational groups. Accordingly, all jobs in this sector offer good employment prospects.

The skill levels required in health are primarily professional and technical. Only three occupations call for intermediate skills. Yet, one of these three—nurse aides, orderlies and patient service associates

This category includes occupations involving the delivery of health care services directly to patients and occupations that provide support to professional and technical staff.

(3413)—alone accounts for more than one person in five employed in the field. When it comes to the professional skill level, one position—registered nurses (3152)—accounts for another fifth. Combined, these two occupations alone represent over one third of the total labour demand in the health sector.

Health 25

Social Science, Education, Government Services and Religion

Approximately 90,000 Montrealers worked in the various occupations in this category in 2004. Social science, education, government services and religion represent 9.9% of the Montréal labour force, which is higher than that in Québec as a whole (8.7%).

After occupations in the natural and applied sciences, this occupational group has posted the strongest growth of all categories since 1987. The share of jobs in this group, which is clearly dominated by teaching, should, as a whole, stabilize in the 2005-2009 period, due to the economic growth which will be similar to the average for all occupations.

This category includes a range of occupations related to law, teaching, counselling, social science research, government policy development, and administration of government and other programs.

The increasingly high skill levels now required by the labour market are contributing to the development of teaching-related occupations. The growing number of immigrants entering Québec will mean an increase in the number of people assigned to the francization, training and and integration of newcomers. However, the decrease in the birth rate is strongly attenuating this upward trend.

With a relatively high average age in these groups, the number of retirements in teaching and government services is expected to increase in the coming years. In light of the government's objective to replace one public servant that retires out of two, job prospects in the public service will be less favourable than in the past.

However, the positions that will need replacing will generate a number of interesting openings to job seekers with the required skills.

Almost all teaching-related occupations offer favourable prospects and account for the bulk of labour demand in this group. It should be noted that the new places to open up in daycare will translate into good prospects for early childhood educators and assistants (4214).

Most of the 29 occupations in this group, which enjoy a generally low unemployment rate, offer attractive prospects, ranging from fair (9) to good (12).

Arts, Culture, Recreation and Sport

This category encompasses professional and technical occupations related to art and culture, including the performing arts, film and video, broadcasting, journalism, writing, creative design, libraries and museums. It also includes occupations in recreation and sport.

Highly concentrated in Montréal, the occupations in this category accounted for 5.2% of all Montrealers' jobs in 2004, employing a total of 47,000 people. This category accounts for only 3.1% of jobs in Québec as a whole.

With the expansion of the recreation, film and multimedia sectors, this category has grown rapidly since 1987. This growth should continue throughout the 2004-2009 forecast period at a more moderate rate, but one that is higher than the average for all

occupational groups. Total labour demand for these occupations will, in relative terms, be stronger than the average for all occupations.

All occupations in this group require professional or technical skill levels. However, since this category frequently hires self-employed, freelance and part-time workers, the unemployment rate is generally above the average. As a result, no occupation in this group offers very good prospects. While two occupations do

offer good prospects— translators, terminologists and interpreters (5125), and interior designers (5242)—the majority of the 34 occupations offer fair (5), limited (13), or very limited (3) prospects. No analysis could be provided for artistic occupations, because they are atypical in nature and cannot be studied according to the usual criteria for labour supply and demand.

Sales and Service

With a labour force of over 205,000 persons in 2004, i.e. almost one quarter (22.6%) of all the Montrealers' jobs, this occupational group is the most imposing of all, both in Montréal and in Québec as a whole (23.5%).

Essentially stable since 1987, this group's share of jobs should increase slightly in the years ahead as a result of economic growth that will be favourable for sales and service occupations. In total, labour demand will be proportionally higher than the average for all occupations. In terms of jobs, over one quarter of openings that become available to Montrealers in the 2005-2009 forecast period will be in sales and service.

This category includes occupations in sales, personal and protective services, as well as in hospitality and tourism.

This group includes several occupations in food and lodging services as well as in wholesale and retail sales. A good number of these occupations require few skills. None requires professional level skills. In fact, 39 of the 58 occupations—close to 80% of sales and service jobs—require only intermediate or elemental skills. Often considered a gateway into the labour market, several of these occupations offer precarious working conditions income, part-time, on-call, seasonal work, etc.), which can result in a high employee turnover rate and brisk interoccupational mobility. Thus, while there may be a number of employment opportunities in

this category, there may also be a very large number of unemployed individuals. Still, almost half of the 58 occupations offer favourable employment prospects: 20 offer fair, 10 good, and 1 very good. The best prospects are for retail and wholesale buyers (6233). But the demand, in terms of number of jobs, is primarily for retail salespersons and sales clerks (6421), which make up more than 17% of the entire labour force in this group. A large number of jobs will also open up for non-technical wholesale trade sales representatives (6411) and for wholesale trade technical sales specialists (6221).

Trades, Transport and Equipment Operators

In 2004, more than 84,000 Montrealers worked in trades, transport and equipment operation, i.e. 9.3% of the Montréal labour force. This group's share of all jobs in Québec as a whole was considerably higher (13.9%).

This is the occupational category that has lost the most ground since 1987. This share is expected to further decline in 2005-2009, due to relatively less favourable economic growth for this group than for occupations as a whole.

The construction sector, among others, which accounts for a number of occupations in this group, has started to slow down after several years of intense

This category includes construction and mechanical trades, trades supervisors and contractors, and operators of transportation and heavy equipment. These occupations are found in a wide range of industrial sectors, but in the construction and transportation industries in particular.

activity. Nonetheless, since the present labour force is relatively old, the next wave of departures due to retirement will generate interesting employment opportunities in several trades and occupations in this category.

This group (93 occupational codes) includes a large number of technical (69) or intermediate (20) level trades, but no professional level occupations.

The prospects for 30 of the occupations could not be assessed because of the small number of jobs they represent. Despite an unemployment rate that is generally above average due to the large proportion of seasonal jobs in this field, most of the other

63 occupations offer favourable job prospects: 33 offer fair prospects, 11 good, and 3 very good.

The best prospects are for heavy-duty equipment mechanics (7312), machine fitters (7316), and bus drivers and subway and other transit operators (7412), who will benefit from the extensive recruitment program set up by the Société de transport de Montréal as part of its medium-term succession planning. The other occupations with the most favourable prospects include truck drivers (7411), and machinists and machining and tooling inspectors (7231).

Primary Industry

The primary industry accounted for an almost negligible share of Montrealers' jobs in 2004 (0.3%), representing a total of about 3,000 persons. This is why only 2 of the 29 primary industry occupations were analyzed.

This category includes supervisory and equipment operation occupations in the natural resource-based sectors of mining, oil and gas production, forestry and logging, agriculture, horticulture and fishing. Most occupations in this category are industry-specific and are not found outside the primary sector.

Landscaping and grounds maintenance labourers (8612) hold the largest number of jobs. Job prospects are fair, but the unemployment rate is high due to the seasonal nature of the work, among other factors.

Landscaping and grounds maintenance contractors and managers (8255) offers fair prospects since the unemployment rate is moderate rather than high.

Primary Industry 44

Processing, Manufacturing and Utilities

Over 65,000 people, or 7.2% of the Montréal labour force, held a job in processing, manufacturing or utilities in 2004. This is less than in Québec as a whole (8%).

The group's share of jobs has tended to decrease since 1987. This decline should continue throughout the 2005-2009 forecast period. With a negative average annual growth rate predicted for this group, only replacement hiring will create openings for job seekers in processing, manufacturing and utilities. The labour demand rate for this group will be the lowest of all ten occupational categories.

This category includes supervisory and production occupations in manufacturing, processing and utilities.

Most of the jobs in this sector require few skills. Of the 79 occupations in this group, 53 require intermediate level skills and 9 require no particular skills (elemental level). Only 17 call for technical skills and represent a mere 6,000 jobs.

Since the unemployment rate for these occupations is often among the highest of all occupations, many of them offer limited (18) or very limited (13) prospects.

Nonetheless, many of the 52 occupations analyzed offer fair (15) or good (4) prospects. Two occupations, in many cases, in the most dynamic manufacturing industries in Montréal, even offer very good prospects.

The best outlook is for food and beverage processing process control and machine operators (9461), and for industrial butchers and meat cutters, poultry preparers and related workers (9462).
