WS7130- Vessel Tracking Solutions

Wi-Sys Communications has successfully integrated intelligent GPS reporting, mobile satellite communications, and the internet to provide a dependable and economic vessel tracking solution. This solution meets the needs of all size marine vessels, from fishing vessels to pleasure craft and large cargo ships.

Combining the WS7130 intelligent GPS tracking and logging device with Globalstar satellite phones to provide the ultimate voice, data and GPS tracking capability. Fleet Managers can now monitor and coordinate the activities of their supply and fishing vessels from their office, while at the same time providing enhanced safety to their crews.

The WS7130 co-exists with standard voice communications and also controls access to the phone's data port permitting alternate use for Internet access to weather reports and advisories, etc.

Features:

- ◆ Simple upgrade to Globalstar portable and fixed phones for VMS compliance
- ◆ Complete Hardware/Wiring/Antenna with simple standalone installation, takes minutes
- ◆ Maritime Voice and Data Communications
- ◆ PC data port access
- ◆ Positive verification of operation
- ◆ Intelligent position and event reporting
- ◆ Data storage, resulting in no lost data
- ◆ Integrated 12 Channel GPS receiver
- ◆ Over the-Air configuration of reporting times.

VMS Compliant

Data Communication Costs:

Flexible and affordable bundled voice and data plans are available e.g. the Skyline 350 plan provides you with, continuous VMS data reporting (24 hourly reports * 30 days) plus up to 180 minutes of voice communication monthly.

Globalstar Communications:

Globalstar's satellite communications offers unparalleled coverage. Its service areas currently extend over 200 miles or more off virtually all coastal areas in North and South America, Europe, Australia and East Asia.

Wi-Sys VMS Solution

Monitoring Service:

Activation of WS7130 units and provision of the Monitoring Services is provided by DigiMap Data Services. Reports received over the Globalstar satellite system re from vessels are passed to the Monitoring agency (DFO).

As an optional service DigiMap offers Fleet Managers the ability to monitor and coordinate the activities of their supply and fishing vessels. Just connect you computer running to the internet, while running DigiMap's Client application and you can retrieve information relating to your vessels.
