Foreword

The *Canadian Natural Gas: Monthly Market Update* is a monthly working paper prepared by the Natural Gas Division of Natural Resources Canada.

Structure and Format of the Report

This five page report provides the most recently available data on natural gas prices and on key fundamentals affecting prices.

To the right is an Executive Summary, which provides a brief, up-to-date overview of natural gas market fundamentals. For those interested in reading ahead, the remainder of the report consists of graphs, with limited text and comments associated with each. The text provides a short description of the natural gas market fundamental, followed by a simple comparative analysis (i.e., year-over-year or month-over-month) of the data contained within the figure.

Beginning in January 2005, this report has been formatted in landscape orientation to be more easily read on a computer screen.

Sources

Various sources are used in developing this report, including Statistics Canada, Canadian Enerdata, Daily Oil Bulletin, the National Energy Board and GLJ Energy Publications.

Executive Summary

The chart below depicts year-over-year percentage changes (given the most recently available month of data) in natural gas prices, heating degree days (weather), natural gas domestic sales and exports, storage, drilling, and natural gas production.

Natural Gas Market Fundamental	Percentage Change	
	+	-
Prices	37%	
Heating Degree Days (HDD's)		1%
Sales		4%
Exports		3%
Storage	41%	
Drilling	27%	
Production		3%

PRICES: CDN \$8.49/GJ in February 2006; an increase of 37%

HDD's: 679 in December 2005; a decrease of 1%

SALES: 279 Bcf in December 2005 a decrease of 4%

EXPORTS: 342 Bcf in December 2005; a decrease of 3%

STORAGE: 328 Bcf in February 2006; an increase of 41%

DRILLING: 1,384 in February 2006; an increase of 27%

PRODUCTION: 528 Bcf in December 2005; a decrease of 3%

Figure 1**Canadian Natural Gas Prices**

Source: GLJ Energy Publications Note: Canadian price is the Alberta price at the AECO hub.

Figure 1 illustrates the price of natural gas at the major Canadian pricing point – the intra-Alberta market. The price is for gas delivered under a 30-day contract. The intra-Alberta market is formed by gas delivered to pipelines in Alberta. Gas changes hands via Nova Inventory Transfers (NIT), exchanges at the AECO storage hub, or sales facilitated by the Natural Gas Exchange (NGX). This is a commodity price – a wholesale price in the producing area. Consumer (or “burner tip”) prices will also include pipeline transmission and distribution costs, which vary across Canada. Natural gas is commonly measured in gigajoules (GJ) or cubic metres. A gigajoule is an energy unit, which equates to about 27 cubic metres of natural gas.

Canadian natural gas commodity prices were CDN \$8.49/GJ in February 2006, 30% lower than the previous month and 37% higher than February 2005.

Figure 2**Canadian Heating Degree Days**

Source: Statistics Canada

Figure 2 shows Canadian Heating Degree Days (HDD's), which are a measure of how cold it is. The more HDD's in any season, the greater is natural gas demand for space heating. If the winter is unusually cold, demand will respond accordingly and natural gas prices will tend to be stronger. However, if the winter is mild, demand will be weaker, which will tend to moderate prices.

In December 2005, there were 679 HDD's, 1% less than in December 2004. Temperatures in December 2005 were 2% warmer than normal.

There were 2% fewer HDD's in 2005.

Figure 3**Canadian Natural Gas Sales**

Source: Statistics Canada **Note:** Most recent month is a preliminary figure.

Figure 4**Canadian Natural Gas Gross Exports to the U.S.**

Source: National Energy Board

Figure 3 illustrates total Canadian natural gas sales. Sales include all natural gas sold to residential and commercial users (for space and water heating, cooking, etc), industries and electricity generating units in Canada. The totals do not include consumption by the natural gas industry itself (e.g., pipeline compressor fuel).

Natural gas sales to Canadian consumers in December 2005 were 279 Bcf, 4% lower than December 2004.

Natural gas sales to Canadian consumers fell 3% in 2005.

Figure 4 illustrates natural gas exports to the U.S.. Canadian natural gas requirements are met entirely by domestic sources, as Canada produces natural gas in excess of what is required for domestic consumption. In comparison, the U.S. consumes more natural gas than it produces, therefore natural gas imports are required to make up the difference. Typically, Canada exports between 50 and 60 per cent of its gas production.

In December 2005, natural gas exports to the U.S. were 342 Bcf, 3% lower than December 2004.

Natural gas exports increased 2% in 2005.

Figure 5**Canadian Natural Gas Storage**

Source: Canadian Enerdata

Figure 5 indicates natural gas storage levels in Canada. The amount of gas in storage generally follows a seasonal pattern. In the summer, when natural gas demand is low, gas is injected into storage. Storage volumes peak in the fall. In winter, volumes are drawn down, reaching a low point in the spring.

Canadian natural gas storage inventories decreased by 57 Bcf during the month of January 2005. Storage levels at the beginning of February 2006 were 328 Bcf, 41% higher than those of February 2005.

Figure 6**Canadian Natural Gas Drilling**

Source: Daily Oil Bulletin

Figure 6 depicts the number of natural gas well completions in Canada. There is a time-lag between drilling a gas well and starting production, due to the work necessary to connect the new well to the pipeline grid. Drilling is therefore a good indicator of future natural gas supply.

There were 1,384 natural gas wells drilled in February 2006, an increase of 27% compared to February 2005.

Figure 7

Canadian Natural Gas Production

Source: Statistics Canada **Note:** Most recent month is a preliminary figure.

Figure 7 shows marketable natural gas production in Canada. Marketable natural gas is the gas available for consumption after processing and excludes producer or plant uses.

Marketable natural gas production was 528 Bcf in December 2005, 3% lower than in December 2004.

Marketable natural gas production increased 1% in 2005.
