INTRODUCTION

This report deals mainly with the dimensional stone industry in Canada, comprising operating dimension stone quarries and stone processing facilities. Dimensional stone, or architectural stone, includes many different rock types and refers to any stone that is capable of being quarried in large blocks and being processed into slabs, small blocks, flagstones, etc. The term "granite," in the commercial sense, is defined as any igneous rock that is suitable for cutting and polishing and includes such rock types as gabbro, gneiss, anorthosite and diabase. Commercial "marble" is a crystalline rock composed primarily of calcite or dolomite that is capable of taking a high polish. Some stone marketed as marble, such as the Adair marble of Ontario, is actually fine-grained sedimentary limestone or dolostone. Other common dimensional stone includes limestone, sandstone and slate. For dimension stone to be accepted by architects for use in building construction projects, it must pass standard ASTM (American Society for Testing and Materials) tests, including specifications for absorption, bulk specific gravity, modulus of rupture, compressive strength, and abrasion resistance. The stone industry determines the value of different stone products based on colour, grain texture, surface finish and durability.

CANADIAN INDUSTRY

Total stone produced in Canada in 2003 (includes dimension stone and crushed stone) was 119.4 Mt valued at \$979.5 million, based on preliminary figures. Table 2 shows stone production broken down by rock type. There has been a decrease in production of 4.3% compared to 2002 final data (Table 3). Crushed stone is used for a variety of construction, chemical, metallurgical and miscellaneous uses. Pulverized stone is used as a mineral filler and for agricultural and environmental applications. The reader

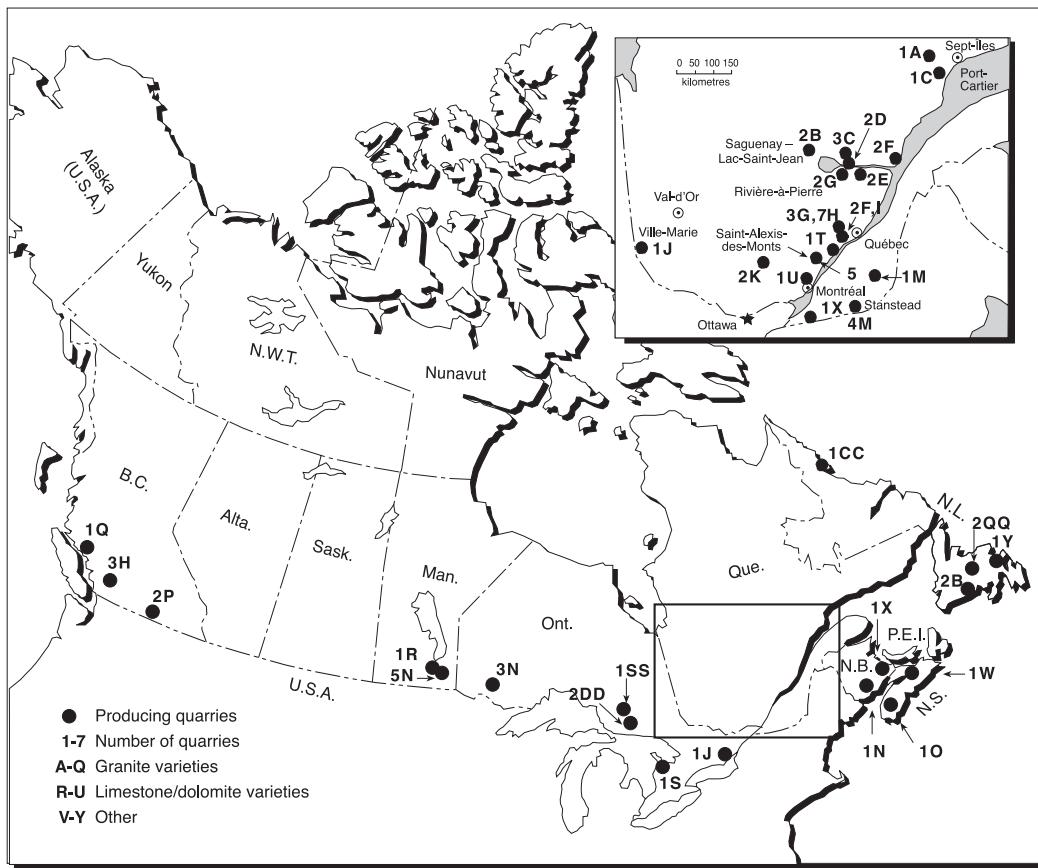

is referred to the chapter entitled "Mineral Aggregates" for more detailed information on crushed stone and sand and gravel, along with information on lightweight aggregates comprising perlite, vermiculite, pumice and expanded clays. Architectural and monumental stone-producing centres are shown in Figure 1. The majority of stone quarries are located in southern Quebec and eastern Ontario, with smaller tonnages being produced in other regions.

In 2002, about 676 000 t of dimensional stone were quarried in Canada. Production can be broken down by stone type as follows: limestone, 308 000 t (45.5%); marble, 42 000 t (6.2%); granite, 244 000 t (36.1%); and sandstone, 82 000 t (12.2%). Production figures for individual stone types are given in Tables 4-8 and include a summary by province or territory and a breakdown by use into dimension stone and crushed stone applications. Table 9 gives a breakdown of rough granite production and trade for the period 1988-2003. Figures 2a and 2b illustrate the trends in crushed and dimension stone production during the period 1992-2003, broken down by stone type. For the two main commercial types of stone produced in Canada, granite and limestone, there has been a general increase in tonnes produced in the last 10 years. Figure 3 illustrates granite production for the period 1992-2002, with a distinct upward trend for rough trimmed product and no growth or a slight decline in monumental and other uses (flagstone, paving blocks). Figure 4 shows limestone production for the same period, illustrating a slight upward trend in production for all types of products. The peak for rough limestone in 1993 is attributed to a temporary increase in production to satisfy demand for construction projects.

The majority of dimension stone produced in Canada is quarried in British Columbia, Ontario and Quebec, each producing granite, limestone and marble. Quarries in Manitoba, Nova Scotia, New Brunswick, and Newfoundland and Labrador produce limestone, granite, sandstone and slate. Most of the dimension stone fabrication facilities in Canada are located in British Columbia, Ontario and Quebec.

A Statistics Canada publication, *Non-Metallic Mineral Mining and Quarrying* (Table 10), provides additional information on shipments of stone by province/territory and type. This publication is available on the Internet at www.statcan.ca/english/freepub/26-226-XIB/free.htm.

Figure 1
Canada, Architectural and Monumental/Ornamental Stone-Producing Centres, 2003

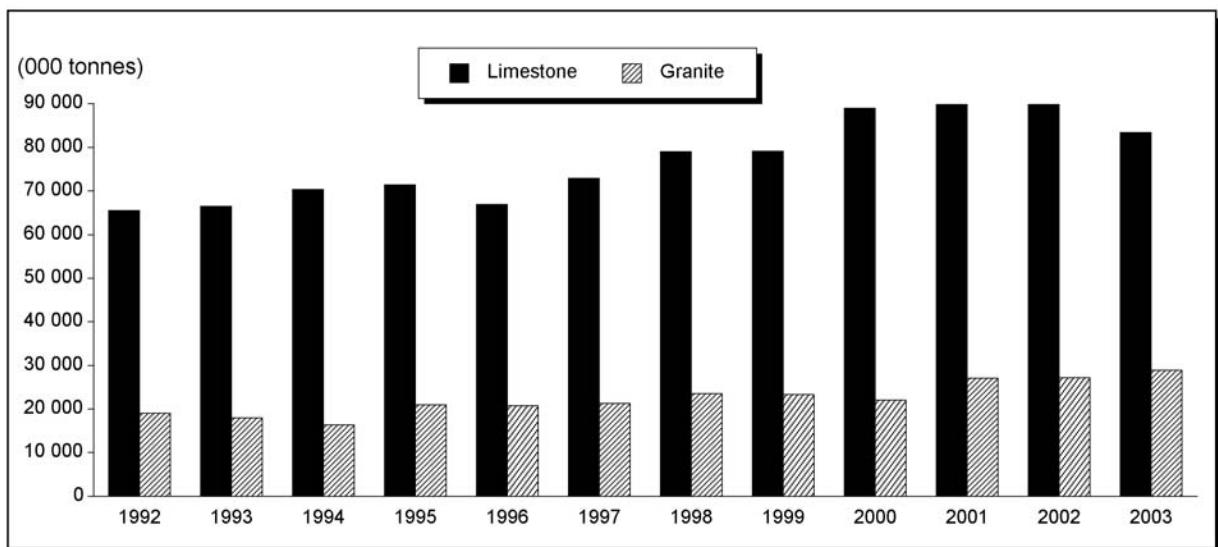

A Fine-grained pinkish-grey banded gneiss
 B Medium-grained pink granite
 C Coarse-grained black anorthosite
 CC Medium-grained "Reflect blue" anorthosite
 D Medium-grained black gabbroic anorthosite
 DD Blue-grey, and black and white anorthosite
 E Medium-grained pinkish-grey quartz monzonite
 F Fine-grained pink granitic gneiss
 G Coarse-grained green charnockite
 H Coarse-grained pink-grey or brown-grey granite
 I Medium-grained grey dioritic gneiss
 J Medium-grained red granite
 K Fine-grained pink aplite
 L Coarse-grained brown or red quartz monzonite
 M Medium-grained grey granite
 N Medium-grained pink, brown or gold granites
 O Fine-grained blue-grey granite
 P Coarse coral pink granite

Q Medium-grained blue-grey granite
 QQ Medium-grained gabbro
 R Light-coloured mottled dolomitic limestone (Tyndall)
 S Fine-medium crystalline blue-grey to buff marble/dolostone (Adair)
 SS Fine-grained, multicoloured pre-Cambrian marble
 T Medium-grained light brownish-grey limestone (Deschambault)
 U Medium-grained blue-grey limestone (Chazy)
 V Medium-grained olive sandstone
 W Fine-medium-grained olive-brown and blue-grey sandstone
 X Fine-medium-grained white to buff sandstone (Potsdam)
 Y Very fine-grained varicoloured slate

TRADE

As is the case for other countries, Canada is both an exporter and importer of rough trimmed stone and other stone products (Table 1). In 2003, Canada exported a total of 111 625 m³ of crude or rough trimmed granite, an increase of 170% over exports in 2002. Stone was exported primarily to China (52%) and the United States (45%). Using a specific gravity of 2.7 for granite, total exports were equivalent to 301 387 t. Canada imported 78 149 t of rough granite, mostly from the United States (41%), South Africa (24.5%), Brazil (9.8%) and Norway (6.8%). This figure is down about 2% from 2002 levels. Regarding partially fabricated granite, Canada exported 16 461 t in 2003, compared to 15 164 t in 2002, an increase of 8.5%. Imports of granite slabs increased 21% to 5500 t compared to 2002.

WORLD OVERVIEW

World dimension stone production for 2002, as estimated by the U.S. Geological Survey, was 77 Mt. The top five producing countries, ranked by tonnage, were China, Italy, India, Iran and Spain, accounting for 73% of world production. The United States ranked eleventh in terms of tonnes produced. Turkey and Brazil are also large exporters of marble and granite, respectively. Canada produced a total of 676 000 t of dimension stone in 2002, compared with 1 054 500 t produced by the United States. The following is a comparison of Canadian and U.S. production by dimension stone types for 2002 (in 000 t): limestone (308 vs. 359), granite (244 vs. 431), marble (23 vs. 67), and sandstone (82 vs. 198).

PRICES

Realized prices for dimension stone are quite variable and depend on factors such as colour, texture, finish and consistency. Average prices, in US\$/tonne, as reported by the U.S. Geological Survey for 2002, were \$252 for granite, \$194 for limestone, \$116 for sandstone, \$294 for marble, and \$614 for slate.

OUTLOOK

It is expected that demand for rough dimension stone products will remain firm in 2004 as commercial construction levels in North America maintain moderate growth. Some Canadian stone products will continue to be in demand internationally, especially in the United States.

More detailed information on the Canadian stone industry at the provincial/territorial level can be found at the natural resources ministry web sites for each province or territory (links are provided on the Minerals and Metals Sector site at www.nrcan.gc.ca/mms/lien/ptd_e.htm).

Notes: (1) For definitions and valuation of mineral production, shipments and trade, please refer to Chapter 64. (2) Information in this review was current as of June 2004. (3) This and other reviews, including previous editions, are available on the Internet at www.nrcan.gc.ca/mms/cmy/com_e.html.

.. Not available; (r) Revised.

(1) Includes rough granite for construction, monumental/ornamental and other uses, as per Table 6. (2) Includes codes 2516.11 (roughly trimmed block) and 2516.12 (cut block by sawing or otherwise). Some re-exports to the United States may also be involved. (3) All export numbers were revised to reflect the conversion from cubic metres to tonnes. Earlier editions of the *Canadian Minerals Yearbook* did not reflect that conversion.
 Note: A factor of 2.7 was used for converting cubic metres to tonnes.
