

YUKON MINFILE 2005

The Yukon MINFILE is a computerized mineral inventory system for recording metallic, industrial mineral and coal occurrences in the Yukon. The database contains detailed descriptions of 2612 separate mineral occurrences located throughout the Yukon Territory. Yukon MINFILE occurrences are categorized according to the National Topographic System (NTS) of 1:250 000 scale map sheets and each occurrence is assigned a unique identifying number within each NTS sheet (e.g., 105D 079). The Yukon MINFILE Database is the most complete reference tool available for researching mineral occurrences in the Yukon. The 2005 update of Yukon MINFILE incorporates data compiled up to October 1, 2005.

Text Files

These files incorporate the major text files (Work History, Geology and References) in Yukon MINFILE and were created to provide the user with publication-quality text in the style of its predecessors, the original Archer, Cathro and Associates Northern Canada Mineral Inventory and the Yukon Geological Survey's WordPerfect text files. Unlike earlier versions these records were created from the database using the summary report function. Thus the user will notice that the actual records are slightly different in appearance from the WordPerfect text files previously published.

Conditions of Use

Copying and distribution of the data is encouraged, subject to the following conditions:

(1) RESALE OF, OR PROFIT FROM COPIED DATA IS STRICTLY PROHIBITED.

(2) ANY REPRODUCTION OF THIS MATERIAL MUST BE ACCOMPANIED BY AN ACKNOWLEDGEMENT OF THE SOURCE.

Although every effort has been made to keep this database as accurate and reliable as possible, the Government of Yukon accepts no liability for any errors or inaccuracies. New information and corrections will be gratefully received.
