## **For Immediate Release**

October 16, 2006

### **OEB posts October's electricity Regulated Price Plan Variance Settlement Factor**

**Toronto** – The Ontario Energy Board (the Board) released today an updated variance settlement factor that is to be used by electricity distributors to calculate a one-time charge for consumers who choose to stop purchasing electricity through the Regulated Price Plan (RPP). This factor, called the “Final RPP Variance Settlement Factor” is updated on the OEB Web site on or around the 15<sup>th</sup> of each month.

The factor posted today, 0.1934 cents per kWh, is based on the difference between the amount RPP consumers paid for electricity (for the period ending September 30, 2006) and the actual amounts paid to generators to supply that electricity.

This factor is to be used by electricity distributors to calculate the final payment by consumers who: (1) cancel their utility account and move outside of the Province of Ontario; (2) switch to a retailer; (3) have an interval meter and elect the spot market pricing option; or (4) cease to remain eligible for the RPP.

A consumer who uses 12,000 kWh per year (1,000 kWh per month), and who chooses to leave the RPP, would make a one-time payment of \$23.21 based on the updated factor posted today. For a consumer who uses less electricity, such as 750 kWh per month, the one-time payment would be \$17.40.

Under the RPP, consumers are charged a regulated stable price for the electricity they consume. That price was set by the Board based on a forecast of the expected cost to supply RPP consumers. When the RPP price differs from the amount actually paid to generators, the difference is tracked by the Ontario Power Authority (OPA) in a variance account. A forecast of that difference was incorporated into the new RPP prices that were announced by the Board on April 12<sup>th</sup> and went into effect on May 1, 2006 for consumers that remain on the RPP. For consumers who leave the plan, the difference needs to be settled upon leaving.

The updated factor posted today was calculated using the net balance in the variance account (as of September 30<sup>th</sup>) of about \$165.5 million, which is \$55.1 million lower than the balance at the end of August. The net variance balance incorporates estimates of the rebate from Ontario Power Generation (OPG) – the difference between the revenue limit for some OPG generation facilities and the price they would have received in the wholesale spot market.

About half of the increase in RPP prices that went into effect on May 1<sup>st</sup> resulted from the need to draw down the variance account balance over the next 12 months. This is the principal reason for the \$55.1 million reduction in the net variance balance discussed above. Another significant contributing factor was that electricity prices in the wholesale spot market during September were lower than prices forecast by the Board and the lowest since June 2002 – a month after Ontario’s restructured electricity market was introduced.

The new RPP prices announced by the Board on October 11<sup>th</sup> go into effect on November 1<sup>st</sup>.

The Ontario Energy Board regulates the province’s electricity and natural gas sectors in the public interest. It envisions a healthy and efficient energy sector with informed consumers, and works towards this vision through regulatory processes that are effective, fair and transparent.
