Perm = Premeability, Sat = Saturation

Location/ Licence Number	Top Depth (m)	Bottom Depth (m)	Thick-ness (m)	Sample Length (m)	Max Perm	90 Deg Perm	Vertical Perm	Max Perm X Thick-ness	Porosity	Porosity X Thickness	Bulk Density (Kg/M3)	Grain Density (Kg/M3)	Oil Sat	Water Sat	Full Description
05-34-01-29 W1 975															soft shalky spots, good small vugular porosity with development in high percentage of core. Few dense tan bands up to 3" thick with pin point porosity. Salty to taste in local spots. Salt deposit on core after drying. No evedence of oil staining.
	1062.84	1063.75	.91												dolomite- medium brown, dense and hard with fair porosity
	1063.75	1065.58	1.83												Lime - light brown with quite large fossils. Follliliferous good porosity development
	1065.58	1067.41	1.83												Lime same as above with less fossils. Good porosity.
	1067.41	1068.93	1.52												Lime grading to dolomite in bottom 2 feet
	1068.93	1069.85	.92												Tan, somewhat silty limestone with few fragments having fair porosity. Few fragments of light grey chalky limestone. Light grey to white micro sln anhydrite.

08-26-03-29 W1 818															anhydrite. Tight. No oil stain.
	980.42	981.91	1.49												Linestone, buff to grey, finely crystalline, earthy to sublithographic in part, medium bedded, pisolitic texture in part. Pilolites replaced by white chalky cement. Fossil replacement and small clasts of grey secondary anhydrite. Fair patchy and banded intercrystalline porosity 7% Good patchy and banded oil stain in earthy sections.
	981.91	983.22	1.31												Dolomite slightly argillaceous, brown grey, finely crystalline, earthy, massive, intraclastic texture in part. Fossiliferous with faintly preserved algal structure at 3224 to 3224.4. Fossil fragments replaced by grey secondary anhydrite. Clasts of snowy secondary anhydrite secondary anhydrite. Clasts of snowy secondary anhydrite secondary anhydriteincreasing slightly basally. Poor intercrystalline porosity 5% Very light patchy oil stain as well as stain around hairline fracture
	983.22	984.5	1.28												Dolomite, anhydritized, grey-brown, fine to medium crystallinity, lithographic, massive with some thin bedding in part. Fossiliferous with fine fossil hash and oolites
