11-16-03-21 W1 373															fine fragmental. Slight oil stain; some anhydrite as above and some thin shaly partings. trace white chalky porous partly siliceous dolomite
	771.11	771.78	.67												Limestone, massive, fine intergranular porosity, medium yellowish brown, good oil stain, good gragmental crinoidal limestone with fine granular, slightly porous matrix.
	772.76	773.22	.46												Limestone, mostly light buff tight crinoidal limestone with some mottled greenish grey/purplish, slightly argillaceous limestone. Several shaly partings.
	773.22	773.25	.03												Shale, grey, calcareous
	773.28	773.34	.06												Clay-shale (muck)
	774.31	776.39	2.08												Limestone, oolitic. Varies from pure oolitic to a mixture of oolitic and crinoidal, mostly shades of light grey except where oil stained. The cleanest oolitic bands are oil stained and slightly porous; the remainder is tight and thoroughly cemented with no oil stain.. Stylolitic partings are abundant; also a few shaly partings, and a few patches of pyrite.
	776.33	777.85	1.52												Limestone, oolitic, as above, several stylolites.
	777.85	779.37	1.52												Limestone oolitic, tight except for some large vuggy porosity, only a trace of oil stain. The middle section of this unit contains. quite
