

Head Lice Control Check List

COMMUNICABLE DISEASE CONTROL

Check your child's head for head lice every week using bright or natural lighting. If you find lice or nits, check the hair of other family members daily for two weeks. Do not treat anyone unless they have lice.

1. Brush hair thoroughly.
2. Before treating, wash hair thoroughly with shampoo **free** of conditioners and other additives. They may interfere with the lice product.
3. Read directions on lice product as some products are applied to damp or dry hair.
4. Shake lice product well.
5. Thoroughly saturate hair and scalp with sufficient amount of lice product (as indicated on product insert).
6. Leave on hair for period of time stated on product. For thicker, longer hair, you may want to double the time and/or amount of product.
7. Rinse hair well with water and towel dry.
8. Part hair into sections to assist with nit removal.
9. Remove **all** nits by pulling them off with your fingers (a nit comb may help). This can take time but it is *the most important* step. Checking for and removing nits should be done daily for 14 days.
10. Repeat steps 1 - 9 in 7 days.

Use another head lice product if **live lice** are found within 24-48 hours after first treatment.

Immediately contact schools, day cares and any other persons who may have been exposed.

Child can return to school or day care after the first treatment.

Call your public health nurse for advice if necessary.

Household Cleaning

1. Soak combs, brushes, hair clips in very *hot* water for 15 minutes.
2. Launder personal belongings (especially head gear), recently-worn clothing, towels and bed linen in *hot* water. Dry using *hot* cycle of the dryer.
3. Items that cannot be exposed to *hot* water should be either placed in a *hot* dryer for 20 minutes, *frozen* at -20 C for 48-72 hours, *sealed* in a plastic bag for 10 days or *dry cleaned*.
4. Vacuum or wash areas where there has been direct head contact (couch, bed, car seat).

*For further information or assistance, please contact _____,
your public health nurse, by calling _____.*
