

2001 Census of Canada Nova Scotia Perspective

Release # 6

**Labour Force Activity, Unpaid Work
and Place of Work**

NOVA SCOTIA HIGHLIGHTS FROM THE 2001 CENSUS OF CANADA

Labour Force Activity

- ! Nova Scotia is following the national trend of an ageing workforce. There is a large segment of the labour force set to retire in the next ten years and beyond. This could lead to skill shortages in the future and the need for increased immigration to bolster workforce numbers and to address any reduction in the skill capacity of the provincial labour force.
- ! The average age of the workforce in Nova Scotia has increased from 36.5 in 1991 to 38.8 in 2001. The percentage of young workers aged 15-24 years has fallen from 18.6% of the labour force in 1991 to 16.2% in 2001 while the percentage of older workers aged fifty-five and above has increased from 9.2% to 10.5% over the same period.
- ! The provincial workforce has increased from 57.9% of the population aged fifteen years and above in 1991 to 61.6% of that population in 2001. Women have increased their representation in the labour force from a 44.3% share in 1991 to a 47.2% share in 2001. In fact, over the past decade, the number of females in the workforce increased by 14,855 while the number of males in the workforce declined by 11,000.
- ! The top occupational group was sales and service representing 26.6% of the workforce followed by business, finance and administration at 15.7%, trades, transport and equipment operators at 14.6%, management occupations at 9.4%, social service, education, government service and religion at 7.4% and health occupations at 5.9%.
- ! The top occupations for men were motor vehicle and transit drivers (5.0%) followed by fishermen (3.0%) and cleaners (2.9%).
- ! The top occupations for women were retail salespersons and sales clerks (3.9%), childcare and home support workers (2.5%) and general office clerical positions (2.5%).
- ! The top industry groups were educational services (7.0%), food services and drinking places (5.6%) and public administration (5.3%).
- ! Young males aged 15-24 had the highest unemployment rate in 2001 at 21.7%. Females of the same age had an unemployment rate of 18.6%. This compares to an overall unemployment rate of 10.9%.
- ! Paid workers made up 90.7% of the provincial workforce. Self employed workers made up 7% of workers, up from 5.7% in 1991, and unpaid family workers made up 0.2% of the workforce.

Unpaid Work

- ! Questions on unpaid work were first asked in the 1996 census and again in the 2001 census.
- ! Women did most of the housework but men were putting in more hours than they did five years ago. In 1996, 82.1% of males were doing at least some unpaid housework compared to 91.7% of females. By 2001 that number had increased to 85.5% for men and stayed virtually the same for women. Most women(27.2%) and men(33.1%) do five to fourteen hours of housework per week. However a greater proportion of women than men did thirty or more hours of housework per week. Only 9.6% of men reported this compared to 25.6% of women.
- ! The number of people providing unpaid care to seniors has risen slightly from the 17.2% reported in 1996 to 18.5% in 2001. Women were providing most of this care with 21.2% indicating that they provided care compared to 15.4% of men who did. Most people who provided care spent less than five hours per week (58.2%) but there were 10.0% who provided twenty or more hours of senior care per week.
- ! Childcare was being provided by 36.7% of people. Women provided most of this care at 40.4% compared to men at 32.6%. Women also reported spending greater numbers of hours providing care than men did. Thirty or more hours of childcare per week was reported by 17.9% of women compared to 7.7% of men.

Place of Work

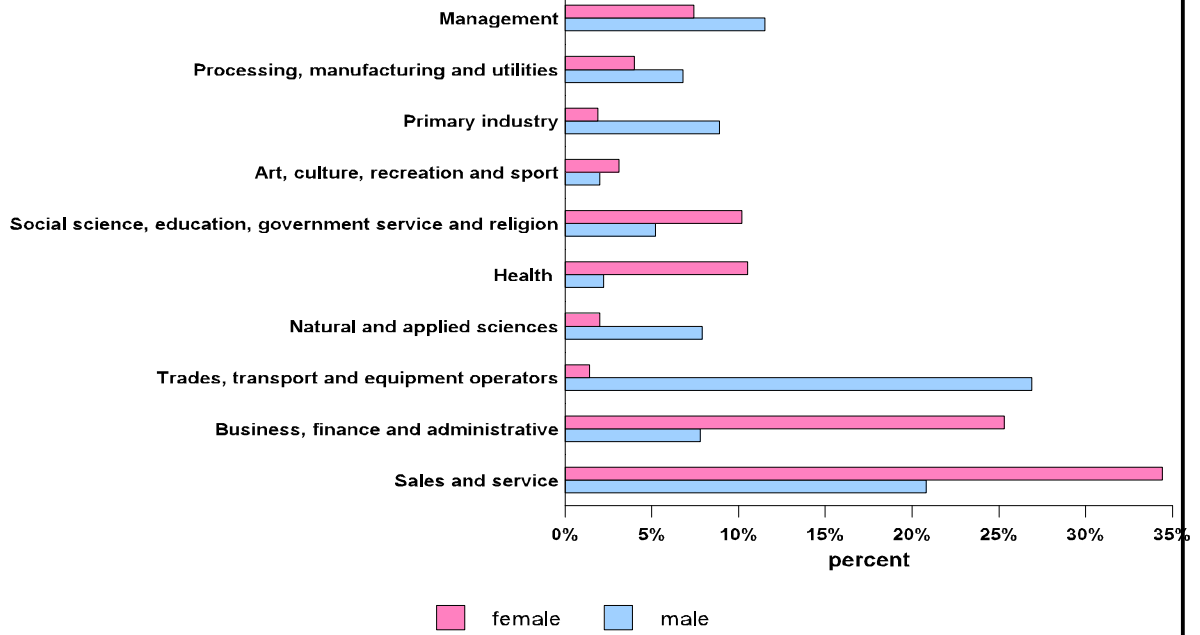

- ! In 2001 there were 332,280 workers who commuted to work in Nova Scotia. Over half of them (57.5%) traveled less than ten kilometers with 36.9% of commuters traveling less than five kilometers. Less than half (42.5%) traveled over ten kilometers and ten percent traveled over 30 kilometers. The median commuting distance was 7.8 kilometers.
- ! There were 11,055 workers who commuted to the Halifax Regional Municipality from other areas of the province. Most came from East Hants Municipal District (4,560), followed by West Hants Municipal District (1,610) and Chester Municipal District (780). There were 2,760 workers who lived in Halifax and commuted to other areas. They worked in East Hants MD (680), Chester MD (225) and Truro (205).
- ! Most commuters in Nova Scotia are drivers of cars (75.2%) or a passenger in one (9.6%). Walking (8.3%) and public transit (4.8%) were the next most popular means of transport.
- ! In Halifax most people commute in cars (77.6%) followed by walking (10.3%) and public transit (9.9%). Bicycles are used by 0.9% of commuters in Halifax.

Additional Information

Statistics Canada's next scheduled release date for data from the 2001 Census is March 11, 2003. This release will cover schooling and education. Further information is available by contacting the Statistics Division, Nova Scotia Department of Finance at 902-424-5691
