

Getting Started in Software Project Measurement

Beth Layman
Senior Consultant
Consultative Engineering

Ottawa SPIN.PPT BL - v1.0 Slide 1
© 1998 Lockheed Martin

Presentation Objectives

- **Define the characteristics of an effective *Project Measurement Process*.**
- **Provide a process for *tailoring* a measurement program to fit project-specific needs.**
- **Provide a systematic process for *analyzing and using* measurement results to manage projects.**

Ottawa SPIN.PPT BL - v1.0 Slide 2

Presentation Outline

- Software Measurement Concepts*
- Project Measurement Overview*
- Selecting Project Measures*
- Applying Project Measures*
- Tips for Getting Started*
- Summary*

Software Measurement Concepts

Role of Measurement

Measurement:

***Provides Information that Improves
Decision Making in Time to Affect the
Business or Mission Outcome***

Ottawa SPIN.PPT BL - v1.0 Slide 5
© 1998 Lockheed Martin

Key Measurement Concepts

- ❑ ***Measurement is a Process***
- ❑ ***Measurement must be used in Decision-Making to be Worthwhile***
- ❑ ***Information must be Available in time to Influence the Outcome***
- ❑ ***Measurement must be linked to Business or Mission Goals***
- ❑ ***Measurement can be a powerful tool for Business Success***

Ottawa SPIN.PPT BL - v1.0 Slide 6
© 1998 Lockheed Martin

Measurement at Each Level

Enterprise

- *Return on Investment*
- *Comparative Analysis*

Process

- *Activity-Based Costing*
- *Benchmarking*
- *Statistical Process Control*

Project

- *Schedule/Progress*
- *Resources/Cost*
- *Growth/Stability*

Product

- *Defect Management*
- *Maintainability*
- *Reliability*

Ottawa SPIN.PPT BL - v1.0 Slide 7
© 1998 Lockheed Martin

Why Project Measurement?

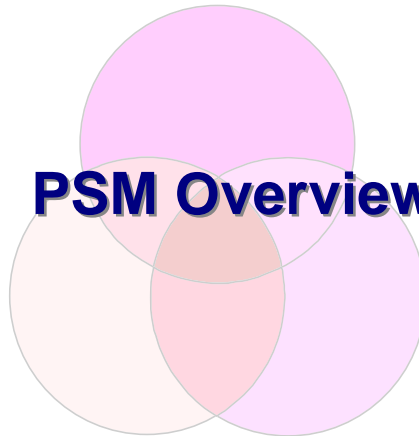

- *Forms basis for process improvement and organizational performance measurement*
- *Software projects (Development and Maintenance) represent 80% of IT investment*
- *Fundamentals first*
- *Many people start top-down (fine for goal alignment - bad for implementation success)*

Ottawa SPIN.PPT BL - v1.0 Slide 8
© 1998 Lockheed Martin

PSM Overview

Ottawa SPIN.PPT BL - v1.0 Slide 9
© 1998 Lockheed Martin

Practical Software Measurement (PSM)

- ❑ *Sponsored by the Joint Logistics Commanders (JLC) and Office of the Secretary of Defense (OSD)*
- ❑ *Purpose was help DoD Software Programs (Projects) improve their performance*
- ❑ *Developed by Technical Consensus*
- ❑ *Presenter is a Principal Author*

Ottawa SPIN.PPT BL - v1.0 Slide 10
© 1998 Lockheed Martin

Lockheed Martin's Role

- *Transition Partner for PSM Products & Services*
- *Translate PSM for Commercial Software Industry (Training, Hypertext version of Guidance)*
- *Help Get PSM Implemented within Commercial Software Organizations*

PSM Objectives

- *Help Project and Technical Managers **Meet Software Cost, Schedule, and Technical Objectives***
- *Provide a Basis for **Objective Communication** and Informed Decision Making*
- *Establish a **Foundation** for Organizational Performance Measurement*

PSM - Scope

- *Project Manager - Development Team*
- *MIS --> Embedded Projects*
- *New and Ongoing Projects*
- *Life Cycle Application - All Phases*
- *Single Project Focus (vs. cross-project comparisons)*
- *Fundamental Practices - “How To” Guidance*

PSM Principles

- *Project **Issues and Objectives Drive** the Measurement Requirements*
- *The **Real Development Process** Defines How the Software is Actually Measured*
- *Collect and Analyze Data at a **Level of Detail Sufficient** to Identify and Isolate Software Problems*

Principles (cont)

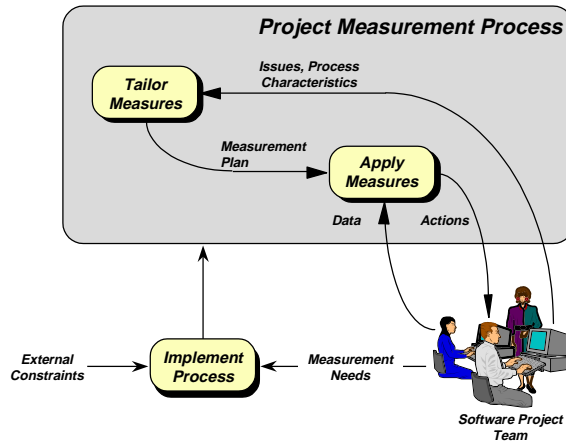

- Implement an ***Independent*** Analysis Capability
- Use a ***Systematic*** Analysis Process to Trace the Measures to the Decisions
- Interpret the Measurement Results In the ***Context*** of Other Project Information

Principles (cont)

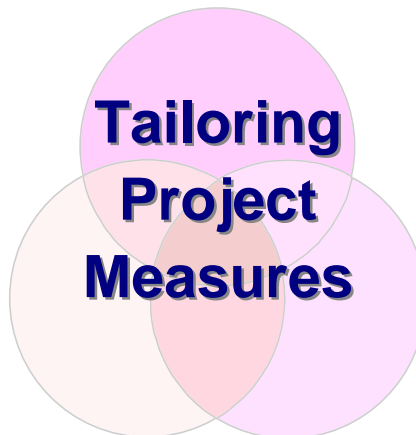

- ***Integrate*** Software Measurement Into the Project Management Process ***Throughout*** the Life-Cycle
- Focus Initially on ***Single Project*** Analysis
- Use the Measurement Process as a Basis for ***Objective Communications***

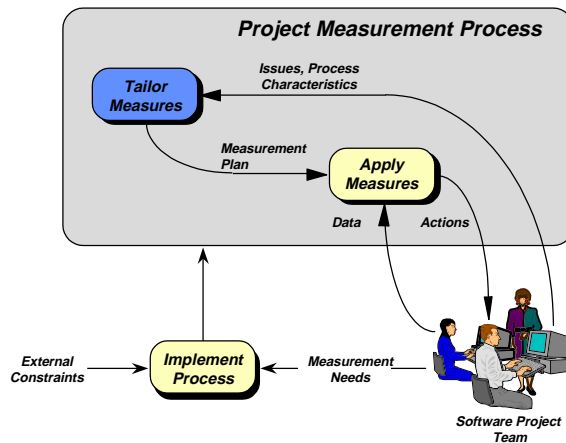

PSM Process Overview

Tailoring Project Measures

Phase 1 - Tailor Measures

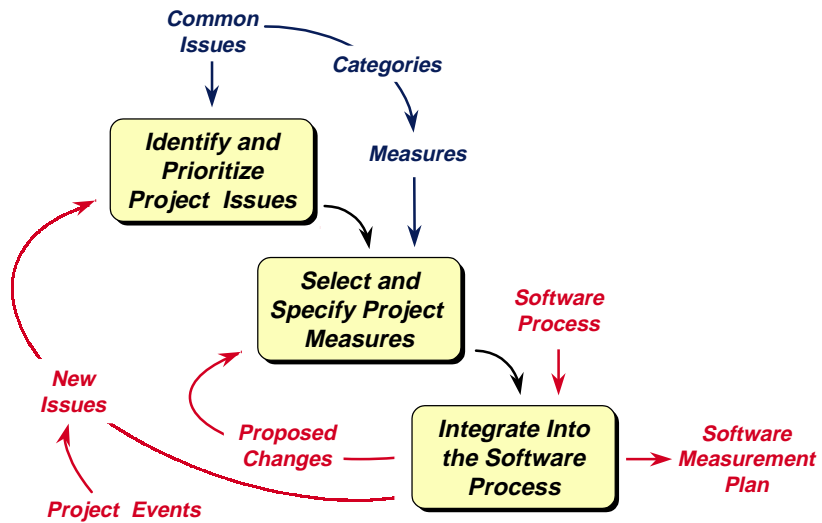

Ottawa SPIN.PPT BL - v1.0 Slide 19
© 1998 Lockheed Martin

Tailoring - Key Concepts

- *Each Software Project Is Described By a Unique Set of Issues*
- *Unique Project Issues Can be Grouped Into Six “Common Issues”*
- *The Project Issues Define the Software Measures that You Need to Use*
- *The Measurement Definitions and Methods are Determined by the Developer’s Software Process*

Ottawa SPIN.PPT BL - v1.0 Slide 20

Development of Project -Specific Issues

Ottawa SPIN.PPT BL - v1.0 Slide 25
© 1998 Lockheed Martin

Issues - Measurement Categories

Schedule and Progress

- Milestone Performance
- Work Unit Progress
- Schedule Performance
- Incremental Capability

Growth and Stability

- Product Size and Stability
- Functional Size and Stability
- Target Computer Resource Utilization

Product Quality

- Defect Profile
- Complexity

Resources and Cost

- Effort Profile
- Staff Profile
- Cost Performance
- Equipment Availability

Development Performance

- Process Maturity
- Productivity
- Rework

Technical Adequacy

- Technology Impacts

Ottawa SPIN.PPT BL - v1.0 Slide 26
© 1998 Lockheed Martin

Measures by Category

Milestone Performance

- *Milestone Dates*

Work Unit Progress

- *Requirements*
- *Components*
- *Test Cases*
- *Problem Reports*
- *Changes*

Schedule Performance

- *Schedule Variance*

Incremental Capability

- *Build Content - Component*
- *Build Content - Function*

Effort Profile

- *Effort*

Staff Profile

- *Staff Level*
- *Staff Experience*
- *Staff Turnover*

Cost Performance

- *Cost Variance*
- *Cost Profile*

Environment Availability

- *Resource Availability Dates*
- *Resource Utilization*

Ottawa SPIN.PPT BL - v1.0 Slide 27
© 1998 Lockheed Martin

Measures by Category (cont.)

Product Size & Stability

- *Lines of Code*
- *Number of Components*
- *Words of Memory*
- *Database Size*

Functional Size & Stability

- *Requirements*
- *Function Points*

Target CRU

- *CPU*
- *I/O*
- *Memory*
- *Storage*
- *Response Time*

Defect Profile

- *Problem Trends*
- *Problem Aging*

Complexity

- *Cyclomatic Complexity*

Process Maturity

- *CMM Level*

Productivity

- *Functional Size/Effort Ratio*
- *Product Size/Effort Ratio*

Rework

- *Rework Size*
- *Rework Effort*

Ottawa SPIN.PPT BL - v1.0 Slide 28
© 1998 Lockheed Martin

Selecting Measures

Schedule and Progress

- Milestone performance
- **Work unit progress**
- Schedule performance
- Incremental capability delivered

Measures

- **Components designed**
- Components implemented
- Components integrated and tested
- Requirements allocated
- Requirements tested
- Test cases completed
- Paths tested
- Problem reports resolved
- Reviews completed
- Changes implemented

Ottawa SPIN.PPT BL - v1.0 Slide 29
© 1998 Lockheed Martin

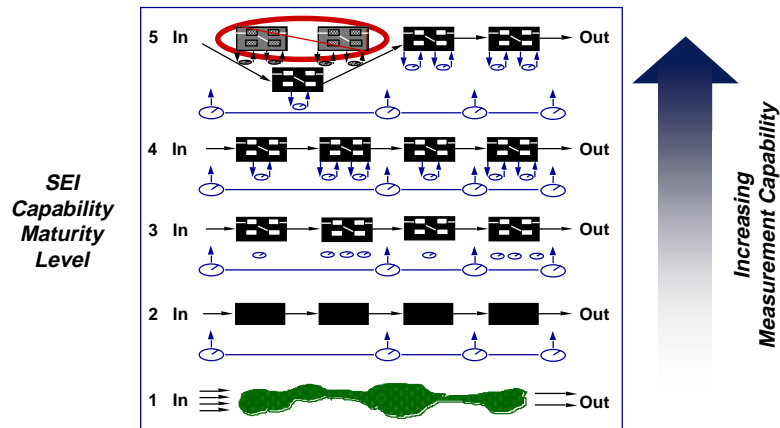

Criteria for Selecting Project Specific Measures

- Measurement Effectiveness
- Domain Characteristics
- Size/Origin of the Software
- Project Management Practices
- Cost and Availability
- Life Cycle Coverage
- External Requirements

Ottawa SPIN.PPT BL - v1.0 Slide 30
© 1998 Lockheed Martin

Software Process Maturity Influences the Measurement Process

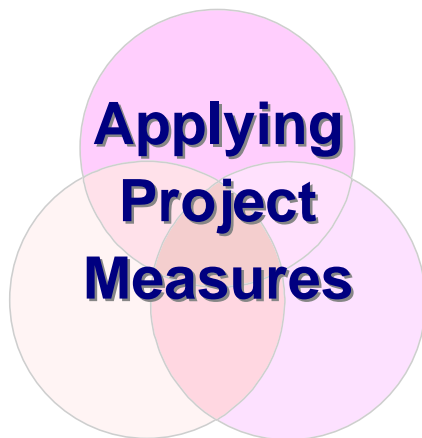

Ottawa SPIN.PPT BL - v1.0 Slide 31
© 1998 Lockheed Martin

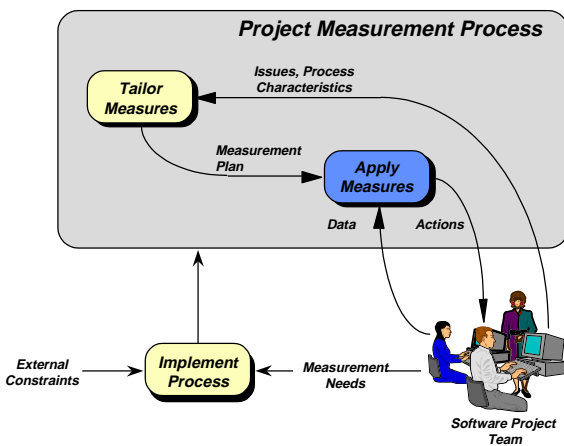

Software Measurement Plan

- *Issues and Selected Measures*
- *Measurement Specifications and Definitions*
- *Data Sources*
- *Measurement Levels and Aggregation*
- *Structures*
- *Frequency of Data Collection*
- *Methods of Data Delivery*
- *Lines of Communication and Interfaces*
- *Frequency of Analysis and Reporting*
- *Working Document*

Ottawa SPIN.PPT BL - v1.0 Slide 32
© 1998 Lockheed Martin

Phase 2 - Applying Measures

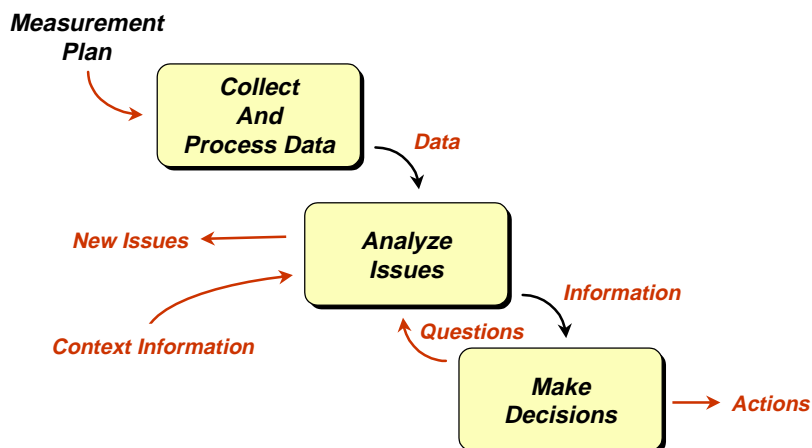

Applying - Key Concepts

- ❑ *Method for Converting Data Into Information*
- ❑ *Quantitative Information must be integrated into decision-making process*
- ❑ *Analysis is flexible, yet systematic and repeatable*
- ❑ *Qualitative Data Must be Considered in the Analysis and Decision-Making Activities*
- ❑ *The Analysis Focus Changes Across the Life-cycle*

Ottawa SPIN.PPT BL - v1.0 Slide 35
© 1998 Lockheed Martin

Applying Software Measures

Ottawa SPIN.PPT BL - v1.0 Slide 36
© 1998 Lockheed Martin

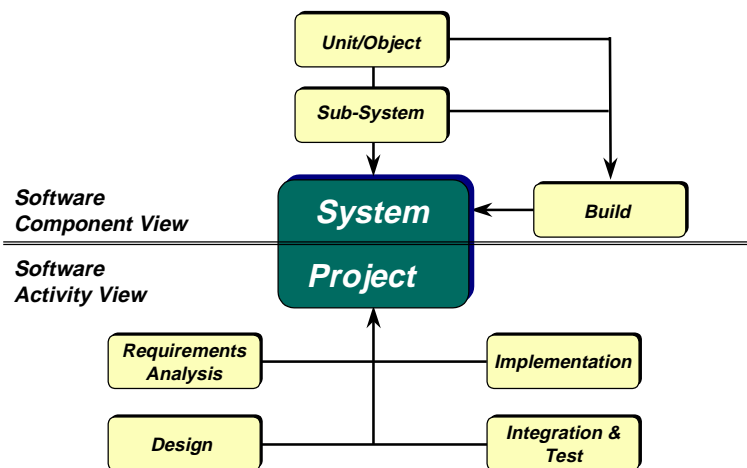

Collect and Process Data

- ❑ *Collect Both Planned and Actual Data Values*
- ❑ *Collect Data at a Level Appropriate to Localize Problems*
- ❑ *Question Unusual Trends and Inconsistencies in the Data*
- ❑ *Collect Data at Least Monthly*
- ❑ *Develop Clear and Concise Definitions to Guide*
- ❑ *Data Collection - Know What the Data Means*
- ❑ *Expect the Data to be “Noisy”*

Ottawa SPIN.PPT BL - v1.0 Slide 37
© 1998 Lockheed Martin

Levels of Data Aggregation

Ottawa SPIN.PPT BL - v1.0 Slide 38
© 1998 Lockheed Martin

Analyze Issues

- *Indicators are generated and systematically analyzed, resulting in an assessment of the status of known issues and the identification of new issues.*

- **Steps:**
 - *Identify Problems*
 - *Assess Problem Impact*
 - *Project Outcome*
 - *Evaluate Alternatives*

Ottawa SPIN.PPT BL - v1.0 Slide 39
© 1998 Lockheed Martin

Indicators

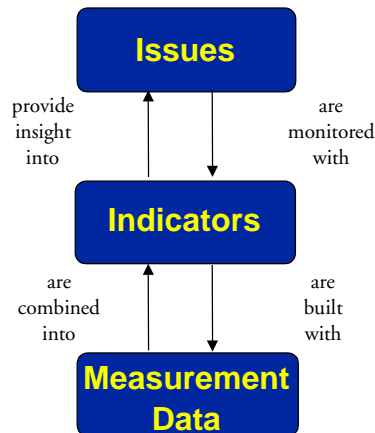

Indicators are the key mechanism used to provide insight into an issue.

Ottawa SPIN.PPT BL - v1.0 Slide 40
© 1998 Lockheed Martin

Project Measurement Model

Ottawa SPIN.PPT BL - v1.0 Slide 41
© 1998 Lockheed Martin

Generating Useful Indicators

- Use **Consistent Conventions**
- Keep it **Simple**; Keep the Message Clear
- **Unique Titles** should Reflect Insight and Scope
- Include an **As-Of** Line or Date
- **Label** each Axis and Provide **Scale** Markers
- **Annotate** with Milestones and Significant Events
- Use **Same** Axes and Scales if Indicators will be Compared

Ottawa SPIN.PPT BL - v1.0 Slide 42
© 1998 Lockheed Martin

Measurement Indicator Baselines

What Are You Comparing?

- **Meaningful Analysis Requires a Measurement Baseline Against Which Actual Values Can Be Compared**
- **Baselines May be Derived From:**
 - Plans
 - Rules of thumb
 - Totals or goals
 - Threshold values
 - Completion criteria
 - Typical values
 - Norms
 - Averages

Ottawa SPIN.PPT BL - v1.0 Slide 43

Types of Measurement Analysis

Ottawa SPIN.PPT BL - v1.0 Slide 47
© 1998 Lockheed Martin

Estimation

- **Analysis conducted to establish target values for use in project planning; usually starts with historical data and a set of assumptions. Should be conducted throughout the project as assumptions change. Includes:**
 - **Size Estimation**
 - **Effort Estimation**
 - **Schedule Estimation**
 - **Quality Estimation**

Ottawa SPIN.PPT BL - v1.0 Slide 48
© 1998 Lockheed Martin

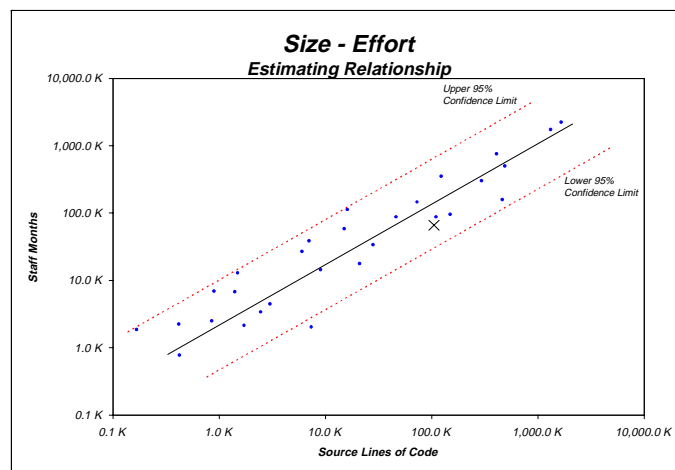

Estimation Approaches

- **Parametric Models**
 - Assumes mathematical relationships exist between factors (size, effort, schedule...)
 - Parameters inflate/deflate estimates
- **Engineering Estimates**
 - Bottom-up approach
 - Also uses parameters
- **Analogy**
 - Detailed comparison of characteristics from past projects
- **Simple Estimating Relationships**
 - Based on local historical data

Ottawa SPIN.PPT BL - v1.0 Slide 49
© 1998 Lockheed Martin

Estimator Indicators

Ottawa SPIN.PPT BL - v1.0 Slide 50
© 1998 Lockheed Martin

Size Estimation

- **Three widely used measures:**
 - *FPs counted from requirements and design specs*
 - *SLOC counted by analogy and rules of thumb (SLOC/unit)*
 - *Change Requests counted by analogy*
- **Size estimates improve as project progresses**
- **Consider separately:**
 - *New*
 - *Modified*
 - *Reused*
 - *Purchased/COTS*

How big is the problem and solution space?

Ottawa SPIN.PPT BL - v1.0 Slide 51
© 1998 Lockheed Martin

Effort Estimation

- **Best supported by existing models**
- **Models use Size-Effort relationship**
- **Models provide 15-100 productivity adjustments:**
 - *Product - reliability, complexity, environment*
 - *Process - tools, skill, maturity*
- **Must determine which factors most influence your organization's productivity**

How much effort will it take?

Ottawa SPIN.PPT BL - v1.0 Slide 52
© 1998 Lockheed Martin

Schedule Estimation

- *Models spread effort over time (e.g., Rayleigh distribution)*
- *Combination of model-based and bottom-up approaches useful here*
- *Usually deals with optimum staffing profiles also*

**How long
will it
take?**

Qttaw SPIN.PPT BL - v1.0 Slide 53
© 1998 Lockheed Martin

Quality Estimation

- *Assumes process capability-product quality relationship*
- *Helps predict defect rates*
- *Two models used:*
 - *Reliability Models*
 - *Transactions Models (insertion and detection)*

**Can my
quality
objectives
be met?**

Qttaw SPIN.PPT BL - v1.0 Slide 54
© 1998 Lockheed Martin

Feasibility Analysis

- **Analysis conducted to determine whether plans and targets are realistic and achievable; should be conducted during the initial planning activity and at all subsequent re-plans. Looks at:**
 - **Realism of planning assumptions (availability, productivity, etc.)**
 - **Completeness of Plans**
 - **Plan Integration and Coordination**

Ottawa SPIN.PPT BL - v1.0 Slide 55
© 1998 Lockheed Martin

Feasibility Analysis Example

Ottawa SPIN.PPT BL - v1.0 Slide 56
© 1998 Lockheed Martin

Feasibility Analysis Checklist

□ **Single Plan Issues:**

- *Are important activities missing on schedules?*
- *Is the overlap between project activities reasonable?*
- *Are holidays, vacations, etc. considered in plans/schedules?*
- *Is the rate of planned progress (i.e., slope) reasonable?*
- *Is planned performance consistent with past performance?*

□ **Plan Integration Issues:**

- *Do totals (i.e. total number of units, total effort) match?*
- *Do summary figures match more detailed breakdowns?*
- *Do dates, milestones, and timeframes match?*
- *Does the effort allocated match workload?*
- *Does the effort allocated match cost/budget plans?*
- *Does any other Project information contradict plans?*

Performance Analysis

- **Analysis conducted to determine whether software development is meeting the plans, assumptions, and targets; should be conducted periodically once a Project has committed to a plan.**

□ **Looks at:**

- *Leading, Basic, and Supplemental indicators*
- *Critical path items*
- *Inconsistent trends*

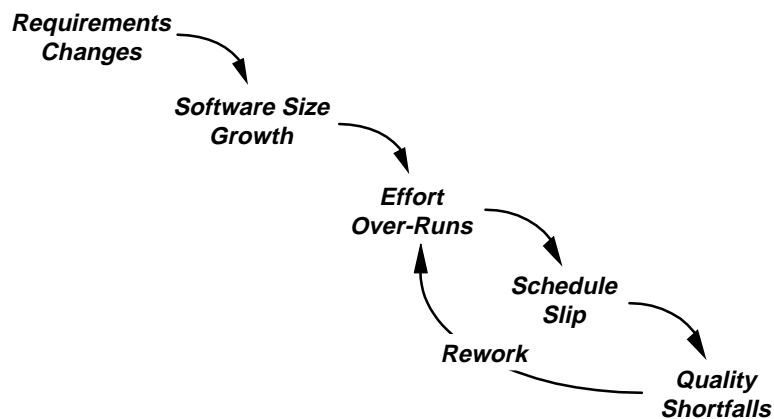

Indicator - Types

- **Leading** - Predicts the future situation with respect to an issue.
 - For example, requirements changes may be a leading indicator for development effort. Changes in requirements usually result in a need for increased effort.
- **Basic** - Describes the current situation with respect to an issue.
 - For example, staffing level describes the developer effort currently being expended by the project.
- **Supplemental** - Provides a more detailed view an an issue.
 - Triggered when other analyses point to a problem that needs to be investigated. Used to help find root cause of a problem.

Performance Analysis Examples

Software Problem Reports Discovery and Closure Trends - Build 1

Integrated Analysis Example

Readiness for Delivery

Performance Analysis Checklist

Single Indicator Issues:

- *Do actual trends correspond to planned trends (e.g., progress, growth, expenditures, etc.)? How big is the variance?*
- *Does the variance appear to be gradually growing each month?*
- *Are actual values exceeding planned limits (e.g., open defects, changes, resource utilization, etc.)?*
- *Are outliers or other anomalies affecting the results?*

Integrated Indicator Issues:

- *Is the source of the problem evident?*
- *Are growing problems in one area a leading indicator of other problems later in the project ?*
- *Do multiple indicators lead to similar conclusions?*
- *Does other project information contradict performance results?*

Ottawa SPIN.PPT BL - v1.0 Slide 67
© 1998 Lockheed Martin

Reporting Analysis Results

- The Measurement Results Must be Clearly Understood by the Decision-Maker**
- The Results should Address:**
 - *Evaluation of Project Status*
 - *Specific Problems*
 - *Recommendations*
 - *Potential New Issues*
- Make Results Available Throughout the Organization**

Ottawa SPIN.PPT BL - v1.0 Slide 68
© 1998 Lockheed Martin

Taking Action

Action Must be Taken to Realize any Benefit from Measurement!

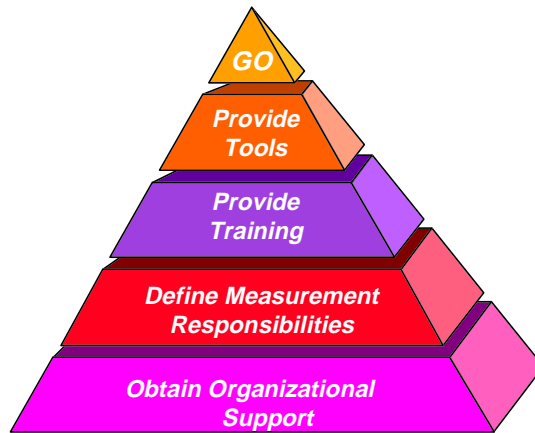

- **Actions May Include:**
 - *Extend schedule to maintain quality*
 - *Add resources to stay on schedule*
 - *Delete capabilities to control costs*
 - *Change the process to improve performance*
 - *Reallocate resources to support key activities*
- **Desired Actions May Not be Possible - May Have to Optimize Within Project Constraints**
- **Effects of Actions Should be Tracked**

**Tips for
Getting
Started**

Implementing A Measurement Process

Ottawa SPIN.PPT BL - v1.0 Slide 71
© 1998 Lockheed Martin

Obtain Organizational Support

- ***Ensure that All Levels of the Organization Understand How Measurement Results Will be Used***
- ***Show How Measurement Benefits each Level of the Organization***
 - *Executive Manager*
 - *Project Manager*
 - *Measurement Analyst*
 - *Development Team*
- ***Directly Address the “Cultural” Impacts of Implementing Measurement***

Ottawa SPIN.PPT BL - v1.0 Slide 72
© 1998 Lockheed Martin

Define Responsibilities

**Executive
Manager**

- *Uses measurement results to make decisions affecting the entire organization*

**Project
Manager**

- *Identifies and manages project issues*
- *Uses measurement results to make project decisions*

**Measurement
Analyst**

- *Tailors measures to address project issues*
- *Collects and analyzes measurement data and reports results*

**Development
Team**

- *Uses measurement results to guide software engineering efforts*
- *Provides measurement data*

Ottawa SPIN.PPT BL - v1.0 Slide 73
© 1998 Lockheed Martin

Provide Training

- **Measurement Principles**
- **Measurement Methodology Training**
- **Measurement Technique Training (e.g., Cost Models, FPs, etc.)**
- **Exploratory Data Analysis Techniques**
- **How to Interpret Graphs (Managers)**
- **Using Quantitative Information to Make Decisions (Managers)**
- **Measurement Tool Training**

Ottawa SPIN.PPT BL - v1.0 Slide 74
© 1998 Lockheed Martin

Provide Tools

- ❑ *Database, Graphing, and Reporting*
- ❑ *Schedule and Project Management*
- ❑ *Financial Management*
- ❑ *Software Analysis and Modeling*
- ❑ *Software Product Analysis*
- ❑ *Software Data Collection*
- ❑ *Office Automation*
- ❑ *Measurement “Workstations”*

Implementation Lessons Learned

Getting Started

- Communicate the goals*
- Start small*
- Don't collect what you don't need*
- Use simple tools initially*
- Begin analyzing as soon as you can*

Using the Results

- Don't evaluate individual performance*
- Make measurement information accessible*
- Listen to 'bad news'*
- Don't try to influence measurement results*
- Pro-actively report project status*
