Canada Post recognizes, but does not warrant, address validation, correction and postal code look-up software on this list. These packages were evaluated by the Software Evaluation and Recognition Program (SERP) using the criteria established by Canada Post as of March 1999. They will be considered valid until September 30, 2007.

The program does not evaluate any subjective criteria such as speed of operation, user friendliness or customer support. This List of Recognized Software details the software packages that have met or exceeded the requirements of SERP. Address correction software must reject 99% of the "non-correctable" addresses and correct 99% of the "correctable" addresses correctly. Validation software must properly categorize addresses as valid or invalid in 98% of the cases. Postal Code Look-Up software must successfully identify the postal code on valid addresses or correctly identify addresses as invalid in 99% of the cases.

Software evaluation is limited to specific testing which evaluates the software's ability to identify or produce accurate address information but not involve any testing or evaluation of any of the additional features or functions that a developer may have incorporated into its software.

The platform information shown on this List of Recognized Software has been supplied by the licensors. The platform information has not been verified by Canada Post.

The names of the software packages shown on this List of Recognized Software have been supplied by the licensors. The fact that a software package has been listed in the List of Recognized Software shall not be deemed to be an admission on the part of Canada Post respecting the validity or the registerability, as a trademark, of the name given to that software package by the licensor.

To obtain additional information on the Address Accuracy Program, please contact your local Canada Post Commercial Services Representative.
