Preface

Welcome to the Alberta Soil Names File (Generation 3) User's Handbook.

The Alberta Soil Names File (Generation 3) is the result of input from many people over the past 20 years, and it reflects the need for both standardized soil type descriptions and the establishment of limits to the geographical distribution of each soil type name (soil name) within Alberta. The original digital soil names file was compiled during the compilation of SIDMAP (Soil Inventory Database for Management and Planning), in the early 1980's. This file listed and described in a cryptic way all of the soil names identified in the existing published soil survey reports. During the compilation of this file for SIDMAP some correlation of soil names occurred:

1. to eliminate duplication of soil names identifying similar soil types, and;
2. to provide the appropriate classification for soil names where the description of the soil characteristics had varied over time.

Resulting from the SIDMAP related activities it became apparent that soil names should be restricted to specific geographic regions of the province. The 1993 version of the Alberta Soil Names File (Generation 2) was the first attempt at allocating soil names to primarily a single Soil Correlation Area (SCA). Coincident with the development of the Soil Names File, a hard copy of the SCA map and relevant documentation describing the process and framework was compiled, culminating in the Alberta Soil Names File (Generation 2) User's Handbook (Alberta Soil Series Working Group, 1993).

The 1993 version of the Alberta Soils Name File (Generation 2) provided the basis for the compilation of the Agricultural Region of Alberta Soil Inventory Database (AGRASID). During the compilation of this digital soil landscape map and database, modifications that included changes to the placement/location of some SCA boundaries as well as changes to the soil names file, were identified. These changes have been incorporated into the Alberta Soil Names File (Generation 3).

Acknowledgements

The authors of the Alberta Soil Names File (Generation 3) User's Manual would like to acknowledge the authors and contributions to the previous version of this handbook as well as contributors and reviewers of this version.

The 1993 Generation 2 document and accompanying Soil Correlation Area (SCA) map was produced by the collaborative effort of representatives of various provincial government agencies and private sector consultants who together comprised the Alberta Soil Series Working Group. A major contributor (co-editor) of this original edition was Len Knapick of Pedocan Land Evaluation Ltd.

Since 1993, the Alberta Soil Names File and accompanying SCA map has been utilized extensively and undergone major modifications, particularly during the compilation of the Agricultural Region of Alberta Soil Inventory Database (AGRASID) and the Soil Landscapes of Canada (SLC) v3.0, Alberta map. Numerous people were directly and indirectly responsible for revisions to the SCA map and soil names file. Bruce Walker, formerly of Agriculture and Agri-Food Canada, now with Beauterre Consultants, Larry Nikiforuk of Soil-Info Ltd., Ron McNeil of LandWise Ltd., Larry Turchenek of AMEC Earth and Environmental, and Wayne Pettapiece, formerly of Agriculture and Agri-Food Canada, now with Pettapiece Pedology, were extensively involved in the development of this latest version of the soil names file and SCA map.

SOIL SURVEY REPORT USERS BEWARE!!

During the compilation of the Alberta Soils Names File (Generation 2 and 3) some soil name definitions were modified and the existing list of acceptable soil names was updated. Through this correlation process, some links to published soil maps and reports no longer exist. For example, a soil name created, used and described in a soil survey report in the Peace River region of the province may also have been used in the Edmonton Soil Survey Report. In this example, the soil type in the Edmonton area will have been assigned a soil name appropriate to the Edmonton area (either an already existing name for a similar soil type or a new soil name if necessary) because it occurs in a different SCA. Similar examples exist throughout the province. In most cases the link to the old name is present in the “notes” field of the Alberta Soil Names File (Generation 3).

History of the Soil Names File and Soil Correlation (SCA) Area Map

Introduction

The Canadian System of Soil Classification (Soil Classification Working Group 1998) has been used to describe the recognized soil types in Alberta. Soils are classified to the subgroup level and the parent material of each recognized soil type is described in terms of the origin of the material as well as its associated physical and chemical characteristics. The practice of assigning a geographic place name to each identified soil type has been used in Alberta for the past 50 years. By referring to a soil type name (soil name), characteristics such as order, great group, subgroup and parent material type and texture may be quickly inferred (once the user is familiar with the soil names and/or soil names codes). Additional characteristics that may be important for the development of various soil interpretations may also be linked to the soil name.

Prior to 1987, the distribution and areal extent of soil names within Alberta was not consistently applied or obvious to a user. In 1987 the Soil Series Working Group was established with the mandate to edit the existing Alberta Soil Names File with respect to the classification and definition of the existing soil names, and assign soil names to specific areas of the province. Fortunately at this time, an in-depth review of recognized agroclimatic and ecological zones within Alberta was underway. This review dove-tailed well with the Working Group's mandate to create a framework in which Alberta soil names could be geographically allocated within the province. As a result, all of the soil names used in the province could have a suite of ecological attributes assigned to them . This exercise culminated in March 1993 with the creation of the Alberta Soil Names File (Generation 2) and accompanying User's Handbook - including the allocation of all existing soil names to Soil Correlation Areas (SCA's).

As an example, the Beazer soil is represented in the soil names file by the 3-letter code "BZR". This soil name originated from the hamlet of Beazer, M.D. of Cardston, in southern Alberta. The Beazer soil is an Orthic Black Chernozem developed on medium textured till. Use of this soil name is restricted to SCA 5. From the definition of SCA 5, additional ecological and agroclimate characteristics associated with the Beazer soil can be estimated as can the extent of its geographical distribution in the province.

During the course of the Canada-Alberta Environmentally Sustainable Agriculture Soil Inventory Project (CAESA-SIP) of the 1990's, the Alberta Soil Names File (Generation 2) underwent

many modifications. Compilation of the Agricultural Region of Alberta Soil Inventory Database (AGRASID) resulted in the addition of approximately 450 soil names. This proliferation of soil names was due to:

1. the recognition of new soil types during the course of describing soil landscape polygons;
2. the necessary exercise of populating empty positions within suites of soils which were SCA specific;
3. the creation of variants of some soil names, and;
4. the creation of specific miscellaneous soils linked to groups of SCA's on the basis of surface soil colour.

The new file created as a result of these changes is the Alberta Soil Names File (Generation 3).

Background to the Development of the Alberta Soil Names File (Generation 2)

From its inception, the Alberta Soil Names File existed primarily as an alphabetical listing of existing soil names. Guidance on where in the province a soil name might be used was to be inferred from the cryptic notes and comments associated with each soil name in the file, or from delving into the appropriate soil survey reports. As a result of these unclear guidelines, the application of the soil naming convention across Alberta was not standardized, and the following inconsistencies became incorporated in published soil survey reports and maps:

1. Some soil names transcended agroclimatic/ecological area boundaries within Alberta. A single soil name occurring in more than one agroclimatic zone could, for example, have more than one capability class rating for a specific interpretation.
2. There were instances where one soil name described two or more different soil types, specifically in terms of their classification at the subgroup level. In other cases, two or more different soil names described the same soil type in the same area.

As a result of these and other inconsistencies identified in the soil names file, the Alberta Soil Inventory Subcommittee established the Soil Series Working Group in 1987 to undertake the development of a standardized soil names catalogue for use in a digital environment. Initial tasks included a brief survey of user needs, a Statement of Need and a list of Applications and

Uses. Funding was obtained under the National Soil Conservation Program via the Canada-Alberta Soil Conservation Initiative for the Soil Series Working Group related activities.

Based upon the recommendations that were submitted, the Working Group identified as necessary products a map that defined the geographic limits of soil names within Alberta, as well as a correlated list of allowable soil names.

To develop these products, four objectives were identified for completion:

1. development of a Soil Correlation Area Map of Alberta;
2. development of the Soil Names File (Generation 2) for Alberta with each soil name restricted to a single SCA. This exercise required extensive correlation and definition of soil name concepts. Also new soil names had to be created to replace soil names that transcended two or more SCA boundaries;
3. creation of a Soil Correlator's Handbook archiving the concepts, methods and procedures used in creating soil names, and;
4. development of an Alberta Soil Names File (Generation 2) User's Handbook.

The result of this effort was the Alberta Soils Name File (Generation 2) User's Handbook (published in 1993) including portions of the soil names file and the SCA map.

Guiding Principles for Applying the SCA Concept to the Alberta Soil Names File (Generation 2 and 3)

During the compilation of the Soil Names File (Generation 2) a number of rules and/or guiding principles were established and systematically applied.

The province was subdivided into 24 SCA's based on the following rational:

1. climate affects soil properties; and,
2. many interpretative products developed by applying soil type information also incorporate climate information.

The Soil Correlation Area (SCA) Map of Alberta reflects the integration of inherent agroclimatic conditions that exist across Alberta with soil development, use and management practices.

To apply the SCA framework to the Alberta Soil Names File (Generation 2) the following assumptions and guidelines were used in the recognition of SCA's and subsequent allocation and correlation of soil names within each climatically similar area:

1. the historic use of one set of soil names for the Brown soils;
2. the historic use of three sets of soil names for the Dark Brown soils;
3. the historic use of three sets of soil names for the Thin Black, Thick Black soils, etc.;
4. the acceptance of the national and provincial ecological frameworks for stratification of climatic parameters and ecological interpretations for forestry and wildlife uses;
5. the acceptance by the agricultural soils community of agroclimate as a stratification of climate, and;
6. the historic use of bedrock geology, till type and material texture to determine soil names within similar climatic areas.

The SCA boundaries coincide to a large degree with recognized climate zones in Alberta. These boundaries also generally agree with accepted ecoregion boundaries. In the agricultural portion of Alberta, SCA's correlate strongly with soil zone lines with further subdivisions reflecting recognized agroclimate zones.

There are situations where an ecoregion has been divided into two or more SCA's. For example, the Moist Mixed Grassland ecoregion is subdivided into SCA 3 and 4. In this instance, historical precedence is established by existing published soil survey reports, overriding the ecological premise of these recognized areas. This situation is often justified on the basis of agroclimate, and/or thickness of the surface layer (e.g., Thin versus Thick Black).

The Alberta Soil Names File (Generation 3) and the 2002 Version of the SCA Map

As noted above, the Alberta Soils Names File (Generation 2) and accompanying SCA map underwent modifications during the compilation of AGRASID. These included the creation of additional soil names within specific SCA's and changes in the placement/location of some SCA boundaries.

Approximately 450 new soil names (sometimes identified as variants of established soil names) were added to the existing list of accepted soil names. These new soil names (and variants)

were required when a specific soil type that was mapped as being dominant (>60%) or codominant (>30% and <60%) within a number of soil landscape polygons, did not previously exist for that SCA. Implementing the SCA guidelines that had been established, unique soil names and soil name codes were identified for each SCA. In instances where the properties of a recently identified new soil type were very similar to those of an existing named soil type, the new soil type may have been described as a variant of the already existing named soil type.

The SCA map defines the geographic distribution of the soil names associated with each SCA. As part of the AGRASID compilation process, the boundaries of the each SCA were inherently linked to the 1:100K scale soil landscape polygons. Upon this closer interrogation of the SCA boundaries, minor modifications were made to the original 1993 SCA lines. In addition to these line changes, the decision was made to delete SCA 11 from the 1993 version of the SCA map. The distinction between SCA 10 and 11 was difficult to implement when mapping the distribution of soil names within these two areas. Originally SCA 10 was restricted to the Aspen Parkland ecoregion and SCA 11 to the Boreal Transition ecoregion. Also, SCA 10 had originally been defined as an area where Black Chernozemic soils commonly existed, while Dark Gray Chernozems and Dark Gray Luvisols were considered to be dominant in SCA 11. However, many exceptions to this general pattern of soils distribution within these two SCA's existed. So much so that during the compilation of AGRASID, the decision was made to join the two SCA's and make a unified list of the soil names identified in each of the two component SCA's. This decision to consider the area as a single SCA did not significantly change the agroclimatic characteristics and corresponding interpretations of the affected soil landscape polygons. Thus the 2002 version of the SCA map includes the area previously identified as SCA 11 within the larger SCA 10, and that all soil names in the Alberta Soil Names File (Generation 3) previously associated with SCA 11 are now associated with SCA 10.

Table 1. Soil Correlation Area (SCA) Map of Alberta Legend

SCA 1: Brown Soil Zone of South-Eastern Alberta

Ecoregion¹: Mixed Grassland Subregion³: Dry Mixedgrass
Agroclimate²: 3A

SCA 2: Dark Brown Highlands of Southern Alberta

Ecoregion: Cypress Upland,
Mixed Grassland,
Moist Mixed Grassland
Agroclimate: 2AH, 2H

Subregion: Mixedgrass,
Montane

Additional Notes: Includes the Cypress Hills, Sweetgrass Hills and eastern portion of the Milk River Ridge

SCA 3: Dark Brown Soil Zone of South-Western Alberta

Ecoregion: Moist Mixed Grassland Subregion: Mixedgrass
Agroclimate: 2A

SCA 4: Dark Brown Soil Zone of East-Central Alberta

Ecoregion: Moist Mixed Grassland,
Aspen Parkland,
Mixed Grassland
Agroclimate: 2AH

Subregion: Northern Fescue,
Central Parkland

SCA 5: Thin Black Soil Zone of South-Western Alberta

Ecoregion: Fescue Grassland Subregion: Foothills Fescue
Agroclimate: 2AH, 3H

SCA 6: Thin Black Soil Zone of South-Central Alberta

Ecoregion: Fescue Grassland Subregion: Foothills Fescue
Agroclimate: 2AH, (3H)

¹ As defined in the publication - A National Ecological Framework for Canada. 1995. Ecological Stratification Working Group. Agriculture and Agri-Food Canada, Research Branch, Centre for Land and Biological Resources research and Environment Canada, State of Environment Directorate, Ecozone Analysis Branch, Ottawa/Hull. Report and national map at 1:7 500 000 scale.

² As defined in the publication –Land Suitability Rating System for Agricultural Crops:1. Spring-seeded small grains. 1995. Agronomic Interpretations Working Group. Edited by W.W. Pettapiece. Tech. Bull. 1995-6E. Centre for Land and Biological Resources Research, Agriculture and Agri-Food Canada, Ottawa. 90 pages and 2 maps.

³ As defined in the publication - Natural Regions and Subregions of Alberta: Summary. 1994. Alberta Environmental Protection. Publication No.:I/531. Report and provincial map at 1:1 000 000 scale.

Table 1 (cont.)

SCA 7: Thin Black Soil Zone of East-Central Alberta

Ecoregion: Aspen Parkland Subregion: Central Parkland
Agroclimate: 2H

SCA 8: Thick Black Soil Zone of South-Western Alberta

Ecoregion: Aspen Parkland,
Northern Continental
Divide,
Fescue Grassland Subregion: Foothills Parkland,
Montane,
Foothills Fescue
Agroclimate: 4H

SCA 9: Thick Black Soil Zone of Southwest-Central Alberta

Ecoregion: Aspen Parkland Subregion: Central Parkland
Agroclimate: 3H

SCA 10: Thick Black/Dark Gray-Gray Soil Zone of Central and East-Central Alberta

Ecoregion: Aspen Parkland, Subregion: Central Parkland,
Boreal Transition Dry Mixedwood
Agroclimate: 2H, 3H

Additional Notes: The amalgamation of SCA 10 and SCA 11 to SCA 10 is a significant change from the original SCA map that was included with the Alberta Soil Names File (Gen2) in 1993. Refer to the accompanying introductory material for a more detailed explanation of this modification.

SCA 12: Dark Gray-Gray Soil Zone of Northeast-Central Alberta

Ecoregion: Boreal Transition,
Mixed Boreal Upland,
Wabasca Lowland Subregion: Dry Mixedwood,
Central Mixedwood
Agroclimate: 3H

SCA 13: The Lower Foothill Area of West-Central Alberta

Ecoregion: Western Alberta Upland Subregion: Lower Foothills
Agroclimate: 4H

SCA 14: The Upper Foothill Area of West-Central Alberta

Ecoregion: Western Alberta Upland Subregion: Upper Foothills,
Agroclimate: 5H Subalpine

Table 1 (cont.)

SCA 15: The Montane, Subalpine and Alpine Areas of West-Central Alberta

Ecoregion: Eastern Continental Ranges
Subregion: Montane, Subalpine, Alpine
Agroclimate: 6H, 7H

SCA 16: The Montane and Subalpine Areas of South-Western Alberta

Ecoregion: Northern Continental Divide, Western Alberta Upland, Eastern Continental Ranges
Subregion: Montane, Subalpine, Alpine
Agroclimate: 6H, 7H

SCA 17: The Central Mixedwood and Lower Foothill Areas of North-Western Alberta

Ecoregion: Clear Hills Upland, Western Boreal, Western Alberta Upland
Subregion: Central Mixedwood, Lower Foothills, Upper Foothills
Agroclimate: 4H (5H)

SCA 18: Dark Gray and Black Soil Zone of the South Peace Area

Ecoregion: Peace Lowland, Boreal Transition
Subregion: Dry Mixedwood, Peace River Parkland
Agroclimate: 2H, 3H

SCA 19: The Boreal Highland Areas of Northern Alberta

Ecoregion: Mid-Boreal Uplands
Subregion: Boreal Highlands
Agroclimate: 5H

Additional Notes: Includes the Birch Mountains, Buffalo Head Hills, and Christina Upland.

SCA 20: The Central Mixedwood Area of Central and Northern Alberta

Ecoregion: Wabasca Lowland, Mid-Boreal Uplands, Hay River Lowland, Slave River Lowland
Subregion: Central Mixedwood, Wetland Mixedwood, Peace River Lowlands, Athabasca Plain
Agroclimate: 4H

SCA 21: The Central Mixedwood Area of East-Central Alberta

Ecoregion: Mid-Boreal Uplands, Boreal Transition
Subregion: Central Mixedwood, Dry Mixedwood
Agroclimate: 4H

Table 1 (cont.)**SCA 22: Gray and Dark Gray Soil Zone of the North Peace Area**

Ecoregion: Peace Lowland
Agroclimate: 3H (4H)

Subregion: Dry Mixedwood,

SCA 23: The Sub-Arctic Areas of Northern Alberta

Ecoregion: Northern Alberta
Uplands,
Mid-Boreal Uplands
Agroclimate: 6-7H

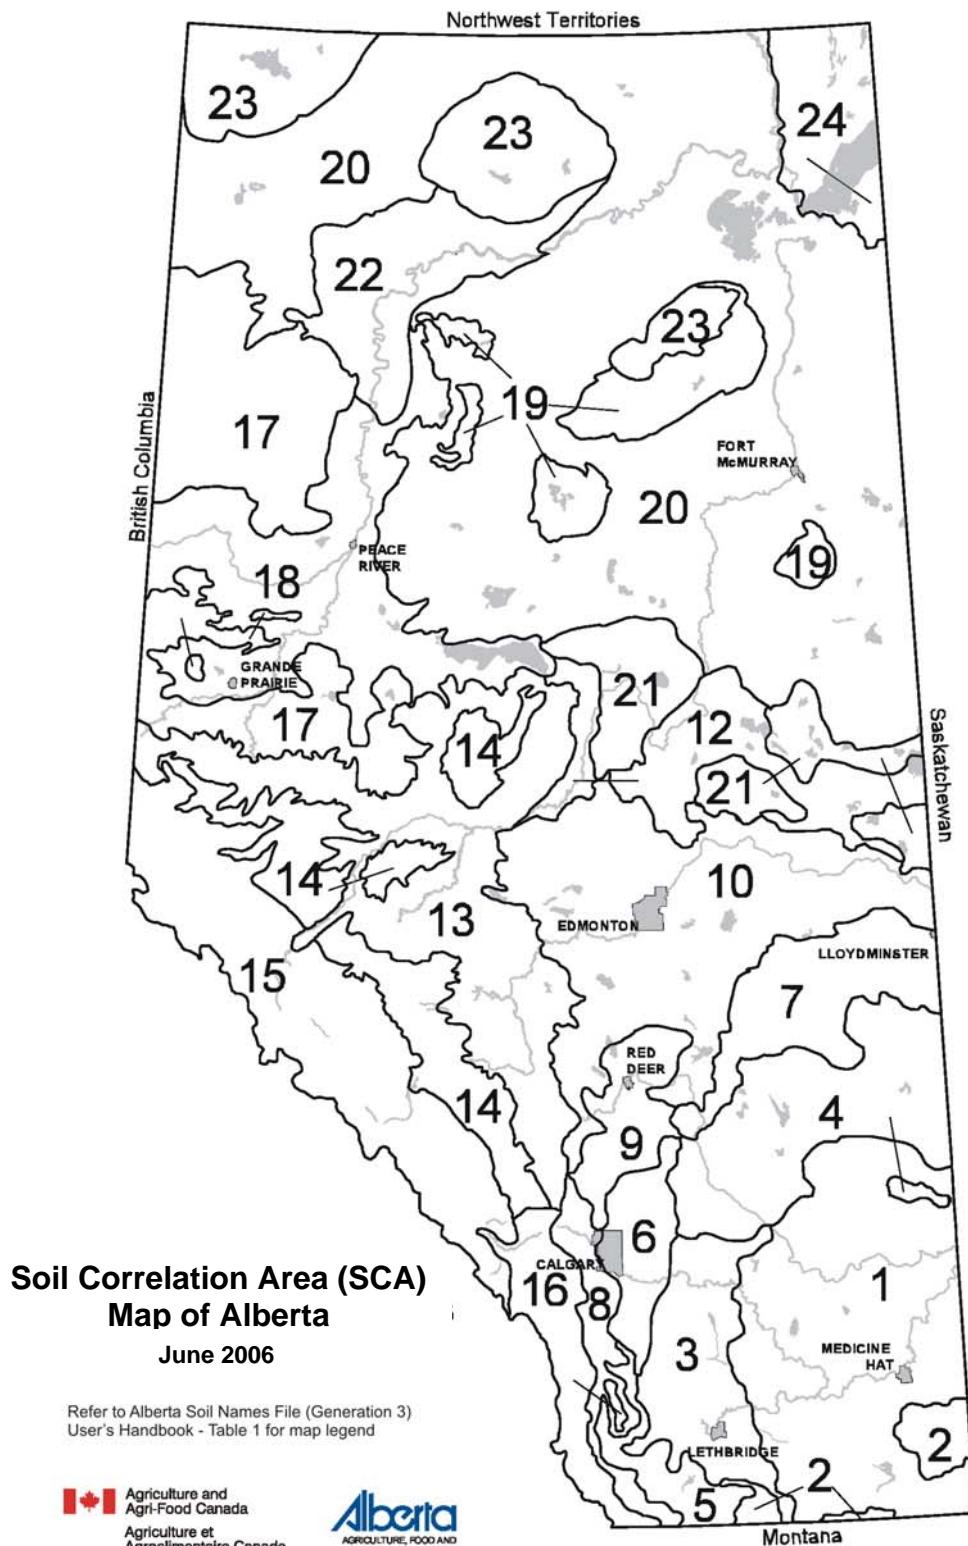

Subregion: Sub-Arctic,
Boreal Highlands

Additional Notes: Includes the Cameron Hills, Caribou Mountains, and the highest portion of the Birch Mountains

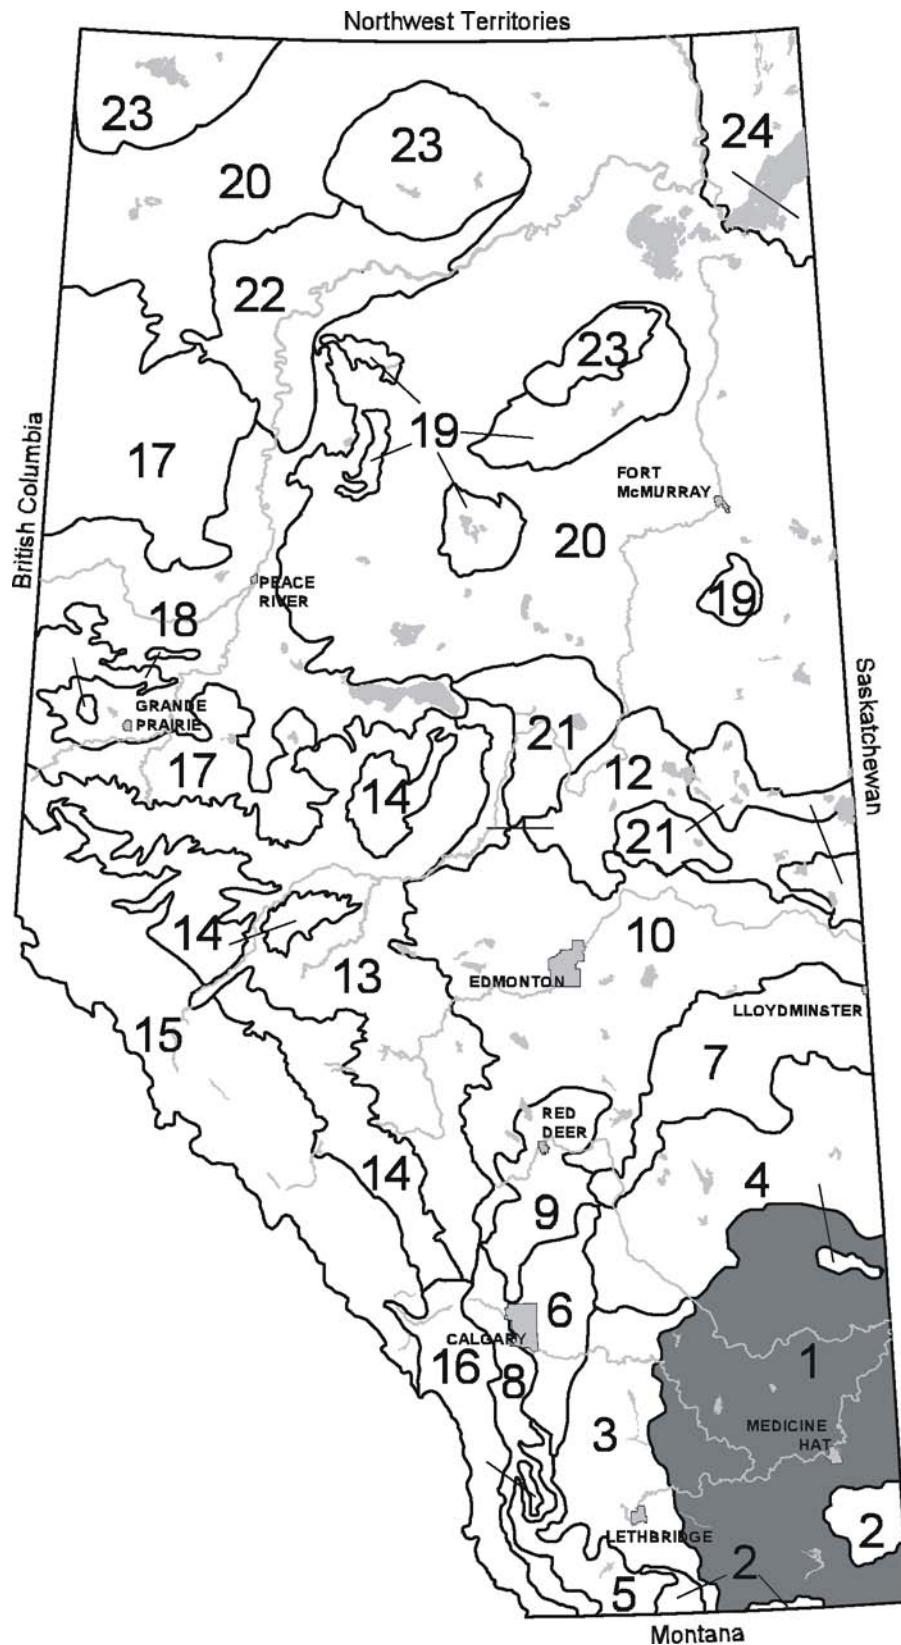

SCA 24: Canadian Shield

Ecoregion: Kazan Lake Upland,
Athabasca Plain
Agroclimate: 6H

Subregion: Kazan Upland,
Athabasca Plain

SCA 17												
Series	New Symbol	Order	SG	Calcar	Salinity	Mas PM	PM1 Tex	PM1 Typ	PM2 Tex	PM2 Typ	Notes	
ALCAN	ALC	LU	O.GL	W	N	F4	FI	TILL	-	-	Developed on Alcan till (moderately fine to fine textured acid shale materials with lime and salts at depth, derived from Kaskapau and Dunvegan Formations). Originally classified as Solod or Solonetzic (Solodic) Gray Luvisol but few pedons qualify both structurally and chemically.	
ALCAN-CO	ALCco	LU	O.GL	W	N	M4	MF	TILL	-	-		
ASPLUND CREEK	ASP	LU	GLD,GL	W	N	F3	FI	GLTL	-	-	Replaced Esher (SCA 18) in SCA 17. Includes some profiles with a solonetzic-like B horizon. Drainage changed to MW, Nov.27/03.	
ASPLUND CREEK-XT	ASPxt	LU	GLD,GL	W	N	L14	FI	GLTL	MF	TILL	Replaced Esher-xt (SCA 18) in SCA 17. Drainage changed to MW, Nov.27/03.	
BRAATEN	BAN	LU	BR,GL	W	N	L9	MC	GLFL	FI	GLLC	Surface material may be VC. Combination of coarse over fine GLLC seems unlikely based on present maps; silty GLLC seems more likely. Often associated with Latornell .	
BRAEBURN	BBN	LU	O.GL	W	N	M4	MF	TILL	-	-	Developed on Braeburn till (derived from weakly calcareous, somewhat stony, medium to moderately fine textured materials derived from Smoky and Wapiti Formations of Late Cretaceous age (may also be used on Kaskapau and Dunvegan Formations-derived till in the Grimshaw area)). If two Ae horizons present in profile use Hillburn.	
BRAEBURN-ST	BBNst	LU	O.GL	W	N	M6	STMF	TILL	-	-		
BRAEBURN-XP	BBNxp	LU	O.GL	W	N	L6	MF	TILL	MC	SRCN		
BLUEBERRY	BRY	LU	GL,GL	W	W	F4	FI	TILL	-	-	Developed on Hazelmere till (moderately fine to fine textured, weakly calcareous materials, often stratified with gravelly or stony layers (SL to C textured) and includes slumped till-like materials). Replaced Hazelmere (non-solonetzic version) (SCA 18) in SCA 17. Drainage changed to MW, Nov. 27/03.	
BLUEBERRY-XP	BRYxp	LU	GL,GL	W	W	L6	FI	TILL	FI	SRFN	Fine-grained softrock within 1 m. Drainage changed to MW, Nov.27/03.	
BAY TREE	BTR	GL	O.HG	W	N	M4	MF	TILL	-	-	Replaced Goose (till version) (SCA 18) in SCA 17.	
BAY TREE-PT	BTRpt	GL	O.HG	W	N	M4	MF	TILL	-	-		
BOUNDARY	BUD	LU	O.GL	N	N	L6	MF	TILL	FI	SRFN	Developed on shallow (acid shale softrock (seldom lithic) at 31-99 cm) Alcan till. Some E.DYB profiles included.	
CALAIS	CAL	LU	GL,GL	W	N	F3	FI	GLTL	-	-	Equivalent to Donnelly (SCA 18). Textures, especially of B horizons, often HC (60-65% C). Drainage changed to MW, Nov.27/03.	
CALAIS-XP	CALxp	LU	GL,GL	W	N	L16	FI	GLTL	FI	SRFN	Fine-grained softrock within 1 m. Drainage changed to MW, Nov.27/03.	
CHINCHAGA	CGA	OR	TY.M	N	N	P2	O	FNPT	-	-	Sedge (fen) peat. Replaced Eaglesham (typic version) (SCA 18) as Mesisol on sedge-dominated peat in SCA 17.	
CHINCHAGA-XC	CGAxc	OR	T.M	W	N	L13	O	FNPT	FI	GLLC	Sedge (fen) peat underlain by mineral soil. Replaced Eaglesham (terrific version) (SCA 18) as Mesisol on sedge-dominated peat overlying fine to very fine textured GLLC material in SCA 17.	
CHINCHAGA-XS	CGAxs	OR	T.M	W	N	L11	O	FNPT	VC	GLFL	Sedge (fen) peat underlain by mineral soil. Replaced Eaglesham (terrific version) (SCA 18) as Mesisol on sedge-dominated peat overlying coarse to very coarse textured GLFL material in SCA 17.	

SCA 17 (cont.)												
Series	New Symbol	Order	SG	Calcar	Salinity	Mas PM	PM1 Tex	PM1 Typ	PM2 Tex	PM2 Typ	Notes	
CHINCHAGA-XT	CGAx ^t	OR	T.M	W	N	L12	O	FNPT	MF	TILL	Sedge (fen) peat underlain by mineral soil. Replaced Eaglesham (terrific version) (SCA 18) as Mesisol on sedge-dominated peat overlying medium to moderately fine textured TILL material in SCA 17.	
CHINCHAGA-XU	CGAx ^u	OR	T.M	W	N	L12	O	FNPT	MF	UNDM	Sedge (fen) peat underlain by mineral soil. Replaced Eaglesham (terrific version) (SCA 18) as Mesisol on sedge-dominated peat overlying medium to moderately fine textured undifferentiated (most likely waterlain) material in SCA 17.	
CORNELIA	CNA	LU	GL,GL	W	N	M4	MF	TILL	-	-	Developed on Braeburn till. Replaced Burnt (SCA 18) in SCA 17.	
CLOUSTON-AA	CSTaa	LU	O,GL	W	N	C1	GRVC	GLFL	-	-	Home SCA is 18 (switched from SCA 17 in April '97).	
CULP-AA	CULaa	LU	O,GL	M	N	C3	MC	GLFL	-	-	Home SCA is 18.	
CORNWALL	CWL	GL	O,LG	M	N	M2	ME	GLFL	-	-	Developed on medium textured parent material (GLLC, GLFL or FLLC). Modal pedon for Wanham-Cornwall suite is CWL . New name created June '97 to replace WHM (SCA 18) in SCA 17. Similar to Bede Creek (SCA 22).	
CORNWALL-PT	CWLpt	GL	O,LG	M	N	M2	ME	GLFL	-	-		
DEBOLT	DBO	SZ	G,SO	W	M	M5	MF	SRFS	-	-	Commonly has thin veneer of till and includes limited extent of similar soils on L6 and F5 materials. Some G,SS profiles included.	
ECONOMY	ECY	LU	O,GL	W	N	L9	MC	GLFL	FI	GLLC	Texture of surface GLFL material similar to Halvorson and Codesa (SCA 18), although it may include some VC textures. This combination (MC-GLFL/FI-GLLC) may be rare in SCA 17 - underlying lacustrine might be coarser textured.	
ECONOMY-GR	ECYgr	LU	O,GL	W	N	L9	GRMC	GLFL	FI	GLLC	Texture of upper materials more likely VC.	
ECONOMY-ST	ECYst	LU	O,GL	W	N	L9	STMC	GLFL	FI	GLLC	Texture of upper materials more likely VC.	
EUREKA	EKA	LU	D,GL	W	N	L9	MC	GLFL	FI	GLLC	Texture of overly may be VC in some cases. Underlying fine textured material may be GLLC or GLTL. Replaced Bellooy-xc (SCA 18) in SCA 17.	
EUREKA-GR	EKAg ^r	LU	D,GL	W	N	L9	GRMC	GLFL	FI	GLLC	Texture of overly may be VC in some cases. Underlying fine textured material may be GLLC or GLTL. Replaced Bellooy-grxc (SCA 18) in SCA 17.	
EUREKA-ST	EKAst	LU	D,GL	W	N	L9	STMC	GLFL	FI	GLLC	Texture of overly may be VC in some cases. Underlying fine textured material may be GLLC or GLTL. Replaced Bellooy-stxc (SCA 18) in SCA 17.	
ELMWORTH-AA	EMWaa	LU	D,GL	W	N	F3	FI	GLTL	-	-	Home SCA is 18.	
ENILDA-AA	ENDaa	GL	O,HG	W	N	M2	ME	FLUV	-	-	Typically developed on layered sediments associated with depressions (potholes, channels) of fluvial fans. Often mapped in association with the better drained High Prairie-aa soils. These soils are rarely cultivated. Home SCA is 18.	
FALHER-AA	FALaa	CH	GLSZ,DG	W C	W	F2	VF	GLLC	-	-	May not be quite as fine textured as modal Falher . Some GLD,GL (SZ var.) included under native conditions, which are rare. Drainage changed to MW, Nov.27/03. Home SCA is 18.	
GOODFARE	GFR	LU	GLSZ,GL	W	W	F3	FI	GLTL	-	-	Similar to Calais but with "solonetzic tendencies". Originally (1996) established in SCA 18 but mapped mainly in SCA 17, therefore switched home SCA to 17 in 1997. Drainage changed to MW, Nov.27/03.	

SCA 17 (cont.)

SERIES	NEW SYMBOL	ORDER	SG	CALCAR	SALINITY	MAS PM	PM1 TEX	PM1 TYP	PM2 TEX	PM2 TYP	NOTES
GRIMSHAW-AA	GMWaa	SZ	DG.SS	W	M	F3	FI	GLTL	-	-	The most common form of Grimshaw-aa occurs on Esher-aa-Donnelly-aa type parent material (GLTL). Textures commonly HC to C. Other variants include those with gleying in upper horizons. Home SCA is 18.
GUNDERSON	GUN	GL	R.G	W	N	C3	MC	GLFL	-	-	Developed on stratified, mainly moderately coarse textured, nearly coarse fragment free materials. Some variants with till or GLLC deposits within 1 m, or with peaty surfaces may be included.
GUNDERSON-PT	GUNpt	GL	R.G	W	N	C3	MC	GLFL	-	-	Peaty version may be more common than non-peaty. Variants with till or GLLC deposits within 1 m may be common.
HILLBURN	HBR	LU	O.GL	W	N	M4	MF	TILL	-	-	Equivalent to Braeburn with two Ae horizons in profile.
HILLBURN-XP	HBRxp	LU	O.GL	W	N	L6	MF	TILL	MC	SRCN	
HIGH PRAIRIE-AA	HPEaa	CH	GL.DGC	W	N	M2	ME	FLUV	-	-	Typically developed on layered sediments, the upper horizons often finer textured (SiCL-CL-C), associated with broad fluvial fans and plains. Sufficiently dry for cultivation in most years. Often mapped in association with poorly drained Enilda soils. Changed classification to GL.DGC, Nov. 27/03. Home SCA is 18.
HALVERSON	HVN	LU	O.GL	W	N	L2	MC	GLFL	MF	TILL	Similar to Codesa (SCA 18) and Hutch Lake (SCA 22). Includes some profiles with VC textured overlay (30-100 cm). Bt's may be weakly developed in some cases - Dystric Brunisols may be included.
HALVERSON-GR	HVNgr	LU	O.GL	W	N	L1	GRMC	GLFL	MF	TILL	
HALVERSON-ST	HVNst	LU	O.GL	W	N	L1	STMC	GLFL	MF	TILL	
IROQUOIS	IRQ	LU	O.GL	M	N	M2	ME	GLFL	-	-	Equivalent to Davis (SCA 18). Replaced Davis-aa in SCA 17.
IROQUOIS-GLXT	IRQglxt	LU	GL,GL	M	N	L3	ME	GLFL	ME	TILL	
JOSEPHINE-AA	JOPaa	GL	HU.LG	N	N	F5	FI	SRFN	-	-	Developed on acidic weathered shale softrock (possibly GLLC in some cases). Mapped with Alcan and Boundary in the Clear Hills (Cherry Point and Hines Creek Report #23). Home SCA is 18.
KAMISAK	KAM	LU	GLSZ,GL	W	W	F4	FI	TILL	-	-	Developed on Hazelmere till. Replaced Hazelmere (solonetzic version) (SCA 18) in SCA 17. Drainage changed to MW, Nov.27/03.
KAMISAK-XP	KAMxp	LU	GLSZ,GL	W	W	L6	FI	TILL	FI	SRFN	Fine-grained softrock within 1 m. Drainage changed to MW, Nov.27/03.
KLESKUN-AA	KKNaa	SZ	GLBL.SZ	W	W	F2	VF	GLLC	-	-	Formerly classified as BL.SZ. Drainage changed to MW, Nov.27/03. Home SCA is 18.
KATHLEEN-AA	KThaa	LU	O.GL	M	N	F1	FI	GLLC	-	-	Home SCA is 18.
LANDRY-AA	LADaa	CH	SZ.BLC	W	W	F3	FI	GLTL	-	-	Developed on the same parent material as Donnelly . Texture of parent material ranges from C-SiC-HC (to about 65% C), and B horizons are often HC. Some GLSZ.BLC profiles included. Rare or nonexistent in SCA 17. Home SCA is 18.
LATORNELL	LAT	LU	BR,GL	W	N	L2	MC	GLFL	MF	TILL	Replaced Pinto (till version) (SCA 13) and Peppers (till version) (SCA 14) in SCA 17. Includes some profiles with VC textured surface.
LA GLACE	LGC	GL	O.HG	M	N	M2	ME	GLFL	-	-	Developed on medium textured GLLC, GLFL or FLLC parent material. Replaced Codner (SCA 13) in SCA 17.
LA GLACE-PT	LGCpt	GL	O.HG	M	N	M2	ME	GLFL	-	-	
LEITH-AA	LIHaa	LU	D,GL	M	N	C3	MC	GLFL	-	-	Home SCA is 18.
MOUNTAIN CREEK	MCK	BR	E.EB	M	N	C2	VC	GLFL	-	-	Replaced Bickerdike (SCA 14) in SCA 17.

SCA 17 (cont.)

TEEPEE-XL	TPExI	BR	E.DYB	N	N	C6	VC	SRCN	-	BRSS	May be the most common form of Teepee.
VALLEYVIEW-AA	VVWaA	SZ	DG.SS	W	M	F5	FI	SRFS	-	-	Home SCA is 18.
WAPITI	WAP	BR	E.EB	W	N	C2	VC	EOLI	-	-	Developed on sand dunes. Lime usually occurs at considerable depth. Formerly a complex that included O.EB, O.GL, BR.GL, and possibly some Dystric Brunisols. Replaced Heart (SCA 18) in SCA 17.
WAPITI-ZL	WAPzI	LU	BR.GL	M	N	C3	MC	EOLI	-	-	Developed on slightly finer textured, more calcareous dune sands in SCA 17. Extracted BR.GL variant from old concept (complex).
WAPITI-ZZ	WAPzz	BR	E.DYB	N	N	C2	VC	EOLI	-	-	Developed on acidic, noncalcareous dune sands in SCA 17. Extracted acid variant from old concept (complex). Profile description similar to that used in losogun Report #43 for Peers-ac (SCA 13).
WILKIN	WIL	LU	SZ,GL	W	N	F4	FI	TILL	-	-	Developed on Hazelmere till. Series mapped and adopted in 1996 (name added in Spring 1997).

SCA 18

Dark Gray and Black Soil Zone of the South Peace Area

SCA 18

SERIES	NEW SYMBOL	ORDER	SG	CALCAR	SALINITY	MAS PM	PM1 TEX	PM1 TYP	PM2 TEX	PM2 TYP	NOTES
ALBRIGHT	AGH	LU	GLD,GL	W	W	F4	FI	TILL	-	-	Equivalent to dark gray Hazelmere . Solonetzic features variant most common, otherwise use Bezanson . Symbol changed from ABT Jan. '91. Home assigned to SCA 18 in Mar. '95. Reverted to "near original" concept Jan. '97. Drainage changed to MW, Nov. 27/03.
ALCAN-AAXP	ALCaaxp	LU	O,GL	W	N	L16	FI	TILL	FI	SRUN	Developed on shallow (softrock at 31-99 cm) Alcan till. Home SCA is 17.
BEZANSON	BEZ	LU	GLD,GL	W	W	F4	FI	TILL	-	-	Equivalent to dark gray Hazelmere . If solonetzic features variant most common, use Albright . Drainage changed to MW, Nov. 27/03.
BELLOY	BLY	LU	D,GL	W	N	L2	MC	GLFL	MF	TILL	Similar to Caribou (SCA 22).
BELLOY-GR	BLYgr	LU	D,GL	W	N	L1	GRMC	GLFL	MF	TILL	Similar to Caribou-gr (SCA 22).
BELLOY-GRXC	BLYgrxc	LU	D,GL	W	N	L9	GRMC	GLFL	FI	GLLC	
BELLOY-ST	BLYst	LU	D,GL	W	N	L1	STMC	GLFL	MF	TILL	Similar to Caribou-st (SCA 22).
BELLOY-STXC	BLYstxc	LU	D,GL	W	N	L9	STMC	GLFL	FI	GLLC	
BELLOY-XC	BLYxc	LU	D,GL	W	N	L9	MC	GLFL	FI	GLLC	Equivalent to shallow (C to SiC textured GLLC or GLTL material at 31-99 cm) Bello . Overlay may be very coarse textured in some cases (BLYxcco). Similar to Rocky Lane (SCA 22).
BURNT	BNT	LU	GL,GL	W	N	M4	MF	TILL	-	-	Equivalent to gleamed Woking .
BRONCO	BOC	CH	O,BLC	M	N	L10	MF	GLLC	-	-	Parent material is mainly SiL overlying SiC to C textured GLLC. It occurs mainly on upper slopes of "humpy" landforms in the Spirit River area. Close to E.BL (overlap with Peoria in past).
BLUESKY	BSY	CH	SZ,DGC	W	W	F2	VF	GLLC	-	-	
BROWNVALE	BWV	LU	GLSZ,GL	W	W	F4	FI	TILL	-	-	Equivalent to solonetzic Hazelmere . Probably close to the original concept of HZM . Established after CAESA-SIP update mapping in 1996. Drainage changed to MW, Nov. 27/03.
BERWYN	BYN	LU	D,GL	W	N	M6	MF	TILL	-	-	Equivalent to dark gray Whitelaw . Symbol changed from BWY to BYN April '97.
CLEARDALE	CLL	LU	GL,GL	W	W	F2	VF	GLLC	-	-	Drainage changed to MW, Nov. 27/03.
CODESA	COS	LU	O,GL	W	N	L2	MC	GLFL	MF	TILL	Series includes profiles with overlays that may be very coarse textured. Underlying material GLTL or GLLC. Similar to Halverson (SCA 17) and Hutch Lake (SCA 22).
CODESA-GR	COSgr	LU	O,GL	W	N	L1	GRMC	GLFL	MF	TILL	
CODESA-GRXC	COSgrxc	LU	O,GL	W	N	L9	GRMC	GLFL	FI	GLLC	Texture of underlying material is C to SiC.
CODESA-ST	COSst	LU	O,GL	W	N	L1	STMC	GLFL	MF	TILL	
CODESA-STXC	COSstxc	LU	O,GL	W	N	L9	STMC	GLFL	FI	GLLC	Texture of underlying material is C to SiC.
CODESA-XC	COSxc	LU	O,GL	W	N	L9	MC	GLFL	FI	GLLC	Texture of underlying material is C to SiC. Similar to Carcajou (SCA 22).
CODESA-XP	COSxp	LU	O,GL	W	N	L7	MC	GLFL	MF	SRFN	
CARDINAL	CRN	LU	D,GL	W	N	M2	ME	GLFL	-	-	Similar to Tangent but profile is weakly calcareous at depth and neutral (acid?). Also has some coarse fragments throughout profile.
CLOUSTON	CST	LU	O,GL	W	N	C1	GRVC	GLFL	-	-	Mapping includes some very gravelly very coarse textured soils. Switched to SCA 18 (from 17) and changed symbol from CUN Apr. '97. Similar to Ponton (SCA 22).
CADOTTE	CTE	LU	GLSZ,GL	M	W	F2	VF	GLLC	-	-	Drainage changed to MW, Nov. 27/03. Similar to Scully (SCA 22).

ESHER-XT	ESHxt	LU	GLD.GL	W	N	L14	FI	GLTL	MF	TILL	Equivalent to shallow (moderately fine textured till (Hazelmere till?) at 31-99 cm) Esher . Upper material textures range from C-SiC-HC. Drainage changed to MW, Nov. 27/03.
EAST PRAIRIE	ETP	CH	GL.DGC	W	N	L14	FI	FLUV	MF	FLUV	Changed classification to GL.DGC, Nov. 27/03.
FALHER	FAL	CH	GLSZ.DG(W)		W	F2	VF	GLLC	-	-	Equivalent to solonetzic Northstar . Originally classified GLDG.SO. May be GLD.GL (solonetzic variant) in rare native condition. Drainage changed to MW, Nov. 27/03.
FITZSIMMONS	FTZ	LU	GLD.GL	W	N	M4	MF	TILL	-	-	Equivalent to gleyed Saddle .
FAIRVIEW	FVW	CH	O.BLC	W	N	M6	MF	TILL	-	-	Developed on Hazelmere till. May have a thin coarse textured veneer. Mapped only in the Fairview area.
FLYINGSHOT	FYS	CH	E.BLC	W	W	F2	VF	GLLC	-	-	
GOODWIN	GDN	GL	O.HG	W	N	M4	MF	TILL	-	-	
GOODWIN-PT	GDNpt	GL	O.HG	W	N	M4	MF	TILL	-	-	
GRIFFIN	GIF	GL	R.HG	M	N	M2	ME	GLFL	-	-	Equivalent to rego Wembley . Also mapped on finer (CL) and coarser (L to SL) textured materials.
GRIMSHAW	GMW	SZ	DG.SS	W	M	F3	FI	GLTL	-	-	The most common form of Grimshaw occurs on Esher-Donnelly parent material, mainly in the Brownvale-Whitelaw area. Textures commonly are HC to C. Other variants include those with gleying in upper horizons.
GRIMSHAW-CO	GMWco	SZ	DG.SS	W	M	F4	FI	TILL	-	-	This coarse textured variant of Grimshaw is mapped on CL to C textured Hazelmere till in the Grimshaw - Whitelaw and Helen Lake - Flood Lake areas.
GOOSE	GOS	GL	O.HG	W	W	F3	FI	GLTL	-	-	Temporary - "All encompassing" entry for AGRASID only.
GOOSE-PT	GOSpt	GL	O.HG	W	W	F3	FI	GLTL	-	-	
GROUARD	GRD	LU	D.GL	W	N	C1	GRVC	GLFL	-	-	May also be very gravelly very coarse textured and moderately calcareous.
GUNDERSON-AA	GUNaa	GL	R.G	W	N	C3	MC	GLFL	-	-	Developed on stratified, mainly moderately coarse textured, nearly coarse fragment free materials. Some variants with till or GLLC deposits within 1 m, or with peaty surfaces may be included. Home SCA is 17.
HUGHALLEN	HAL	CH	E.BLC	W	W	F4	FI	TILL	-	-	Developed on Hazelmere till.
HELEN	HEN	GL	R.HG	S	M	F1	FI	GLLC	-	-	Developed on GLLC material that is saline to the surface and often stratified with silty to sandy layers.
HERMIT	HIT	CH	SZ.BLC	W	W	F4	FI	TILL	-	-	Developed on Hazelmere till. Symbol changed from HMT to HIT , April '97.
HAMELIN	HML	CH	O.DGC	W	W	F2	VF	GLLC	-	-	
HIGH PRAIRIE	HPE	CH	GL.DGC	W	N	M2	ME	FLUV	-	-	Typically developed on layered sediments, the upper horizons often finer textured (SiCL-CL-C), associated with broad fluvial fans and plains. Sufficiently dry for cultivation in most years. Often mapped in association with poorly drained Enilda soils. Changed classification to GL.DGC, Nov. 27/03.
HEART	HRT	BR	E.EB	W	N	C2	VC	EOLI	-	-	Developed on sand dunes. Old concept (complex) embraces O.EB, O.GL and BR.GL, possibly some Dystric Brunisols. Lime usually present at considerable depth.
HYTHE	HYH	LU	D.GL	W	N	M?	ME	TILL	-	-	Equivalent to dark gray Woking . If moderately fine textured use Saddle . Similar to Surette Lake (SCA 22).

SCA 18 (cont.)

LAWRENCE	LRC	SZ	G.SS	M	M	F4	FI	TILL	-	-	Developed on Lawrence till (clay textured, moderately calcareous, moderately saline, with high shale content (pink flakes)).
MULLIGAN-AA	MGNaa	LU	O.GL	W	W	F2	VF	GLLC	-	-	Ap horizon light colored (mainly from old Ae). Home SCA is 18.
MEIKLE	MKL	LU	GL.GL	M	W	F2	VF	GLLC	-	-	
MOUNT WATT	MTW	LU	GLSZ.GL	W	W	F4	FI	TILL	-	-	Equivalent to solonetzic Steephill . Likely includes some soils classified as GLG.SO. Drainage changed to MW Nov.27/03.
MUSTUS LAKE	MUT	OR	T.M	W	N	L13	O	FNPT	FI	GLLC	Mesisols developed on sedge (fen) peat underlain by mineral soil. Equivalent to Whooping with shallow fen peat overlying fine textured (mostly F1 and F2) materials. Similar to Eaglesham (SCA 18).
NINA LAKE	NLK	LU	GLD.GL	M	W	F2	VF	GLLC	-	-	Drainage changed to MW Nov.27/03.
PARMA	PMA	GL	SZ.LG	W	M	F2	VF	GLLC	-	-	Developed on moderately saline clays. Previously classified as GLBL.SS (when no SZ.LG). Used in the High Level area.
PRAIRIE POINT	PNT	LU	D.GL	M	N	C3	MC	GLFL	-	-	Similar to Leith (SCA 18) and commonly associated with Linton Lake . Weakly calcareous variant may also occur.
PONTON	PON	LU	O.GL	W	N	C1	GRVC	GLFL	-	-	Similar to Clouston (SCA 18). May be moderately calcareous.
PADDLE PRAIRIE	PPR	LU	GLSZ.GL	W	W	F2	VF	GLLC	-	-	Drainage changed to MW Nov.27/03.
ROCKY LANE	RLE	LU	D.GL	W	N	L9	MC	GLFL	FI	GLLC	Similar to Belloy-xc (SCA 18).
ROCKY LANE-CO	RLEco	LU	D.GL	W	N	L9	VC	GLFL	FI	GLLC	Bt horizon likely SL textured.
ROCKY LANE-GL	RLEgl	LU	GLD.GL	W	N	L9	MC	GLFL	FI	GLLC	Drainage changed to MW Nov.27/03.
ROCKY LANE-GR	RLEgr	LU	D.GL	W	N	L1	GRMC	GLFL	FI	GLLC	Overlay (30-100 cm thick) may be very coarse textured in some cases.
ROCKY LANE-ST	RLEst	LU	D.GL	W	N	L1	STMC	GLFL	FI	GLLC	Overlay (30-100 cm thick) may be very coarse textured in some cases.
SCULLY	SCY	LU	GLSZ.GL	M	W	F2	VF	GLLC	-	-	Similar to Cadotte (SCA 18). Brownish column; moderately calcareous generally at shallow depths (eg. 50 cm). May include some MW drained SZ.GL. Drainage changed to MW Nov.27/03.
SCULLY-XT	SCYxt	LU	GLSZ.GL	M	W	L15	VF	GLLC	MF	TILL	Drainage changed to MW Nov.27/03.
SLED ISLAND	SDL	LU	O.GL	M	N	C2	VC	GLFL	-	-	Similar to Linton Lake but coarser textured. Bt horizon has clay lamellae. Similar to Culp-co (SCA 18).
SLED ISLAND-XG	SDLxg	LU	O.GL	M	N	L4	VC	GLFL	GRVC	GLFL	
SURETTE LAKE	SKE	BR	E.EB	W	N	C2	VC	EOLI	-	-	Developed on sand dunes. Old concept (complex) embraced O.EB, O.GL, & BR.GL, possibly some Dystric Brunisols. Lime usually occurs at considerable depth. Similar to Heart (SCA 18).
SILVER VALLEY-AA	SLVaa	LU	O.GL	N	N	L6	MF	TILL	FI	SRFN	Developed on shallow (acid shale softrock (seldom lithic) at 31-99 cm) Alcan(?) till, mainly on slopes of Mt. Watt. Similar to Boundary (SCA 17). Home SCA is 18.
SPIRIT RIVER-AA	SRVaa	CH	O.DGC	W	N	F1	FI	FLUV	-	-	Fine textured, Dark Gray variant of Spirit River (SCA 18) located in the Paddle Prairie area. Occurs to a limited extent in SCA 22.
STEEPHILL	STH	LU	GL.GL	W	W	F4	FI	TILL	-	-	Developed on Hazelmere till (moderately fine to fine textured, weakly calcareous, often stratified with gravelly or stony layers (SL to C textured) and includes slumped till-like materials). Originally called GLTL but more till-like and at higher elevations than Hotchkiss . Replaced Hazelmere (SCA 18) soils in SCA 22.

SCA 22 (cont.)											
Series	New Symbol	Order	SG	Calcar	Salinity	Mas PM	PM1 Tex	PM1 Typ	PM2 Tex	PM2 Typ	Notes
SAVAGE	SVG	GL	R.G	N	N	F1	FI	GLLC	-	-	Developed on extremely acid clays that are commonly stratified (finer near surface) with layers of organic material throughout.
SAVAGE-PT WOKING-AA	SVGpt	GL	R.G	N	N	F1	FI	GLLC	-	-	Developed on Braeburn till (derived from weakly calcareous, somewhat stony, medium to moderately fine textured materials derived from Smoky and Wapiti Formations of Late Cretaceous age). Very limited extent. Home SCA is 18.
	WOKaa	LU	O.GL	W	N	M4	MF	TILL	-	-	
WHOOPING	WPG	OR	TY.M	N	N	P2	O	FNPT	-	-	Sedge (fen) peat. Replaced Eaglesham (typic version) (SCA 18) as Mesisol on sedge-dominated peat in SCA 22.
WHOOPING-XS	WPGxs	OR	T.M	W	N	L11	O	FNPT	VC	GLFL	Whooping with underlying coarse to very coarse textured GLFL and related materials.
WHOOPING-XT	WPGxt	OR	T.M	M	N	L13	O	FNPT	FI	TILL	Whooping with underlying fine textured till (assume Lawrence till).
WHOOPING-XU	WPGxu	OR	T.M	W	N	L12	O	FNPT	MF	UNDM	Whooping with underlying moderately fine textured undifferentiated (likely mostly waterlain) materials.
WOLVERINE	WVR	OR	TY.M	N	N	P1	O	SPPT	-	-	Sphagnum (bog) peat. Replaced Kenzie (typic version) (SCA 18) as Mesisol on sphagnum-dominated peat in SCA 22.
WOLVERINE-XC	WVRxc	OR	T.M	W	N	L13	O	SPPT	FI	GLLC	Wolverine with underlying fine textured GLLC materials.
WOLVERINE-XS	WVRxs	OR	T.M	W	N	L11	O	SPPT	VC	GLFL	Wolverine with underlying coarse to very coarse textured GLFL and related materials.
WOLVERINE-XT	WVRxt	OR	T.M	M	N	L13	O	SPPT	FI	TILL	Wolverine with underlying fine textured till (assume Lawrence till).
WOLVERINE-XU	WVRxu	OR	T.M	W	N	L12	O	SPPT	MF	UNDM	Wolverine with underlying moderately fine textured undifferentiated (likely mostly waterlain) materials.

HARRISON-AA	HRsaa	RG	O.R	N	N	C2	VC	EOLI	-	-	Developed on sandy (often stony, gravelly or bouldery) ice-contact GLFL parent material, including kame moraines. Home SCA is 20.
MILDRED-AA	MILaa	BR	E.DYB	N	N	C2	VC	GLFL	-	-	Developed on sand or loamy sand textured GLFL parent material with very few coarse fragments. Strongly acidic soils usually found under jackpine or aspen. Home SCA is 20.
MCLELLAND-AA	MLDaa	OR	TY.M	N	N	P2	O	FNPT	-	-	Sedge (fen) peat. Home SCA is 20.

Appendix A

Correlation of Soil Series on Parent Materials

The following tables present the soil series recognized in each Soil Correlation Area (SCA) within a matrix that identifies the soil classification (subgroup level) and the parent material type (MAS_PM – parent material and texture). Parent material type definitions have also been included. Parent material types have been grouped into till, till over softrock, wind or water deposited materials over till, wind or water deposited materials, undifferentiated materials, wind or water deposited materials (generally) over softrock, residual (softrock), and organic materials. Within each group, parent material types have been arranged by texture, with the coarsest materials occurring first and the finest materials last.

In many SCA's a number of different till materials have been identified based on one or more of the following features:

1. texture;
2. geologic age;
3. associated bedrock formation/lithology;
4. calcareousness, and;
5. cordilleran or continental origin

Refer to the correlation notes in the soil names file for distinguishing features of these different till types.

Parent Material Type (MAS_PM)	Definition
C4 C5 M6 M4 F4	on very coarse textured (S, LS) till on moderately coarse textured (SL,FSL) till on gravelly and stony medium textured (L, CL) till on medium textured (L, CL) till on fine textured (C) till
L6	on variable textured till over softrock
L1 L17 L2 L3 L14 L15	on gravel or gravelly coarse textured (S, LS, SL, FSL) materials over medium (L, CL) or fine (C) textured till (includes cobbly and stony variations) on gravelly medium textured (L, SiL, VFSL, SCL, CL, SiCL) materials (includes stony variations) over medium (L, CL) or fine (C) textured till on coarse textured (S, LS, SL) materials over medium (L, CL) or fine (C) textured till on medium textured (VFSL, L, SiCL, CL) materials over medium (L, CL) or fine (C) textured till on fine textured (C, SiC, SC) materials (not till) over medium (L, SiL, VFSL) to moderately fine (SCL, CL, SiCL) textured till on very fine textured (HC) materials (not till) over medium (L, SiL, VFSL) to moderately fine (SCL, CL, SiCL) textured till
C1 M1 L21 C2 L4 L0 L20 L9 C3 M2 L5 L10 L18 M3 F1 F3 L22 F2	on gravel or gravelly coarse textured (S, LS, SL, FSL) materials (includes cobbly and stony variations) on gravelly medium textured (L, SiL, VFSL, SCL, CL, SiCL) sediments deposited by water (includes cobbly and stony variations) on gravelly coarse textured (S, LS, SL, FSL) over medium (L, SiL, VFSL) or moderately fine (SCL, CL, SiCL) textured materials (not till) on very coarse textured (S, LS) sediments deposited by wind or water on coarse textured (S, LS, SL, FSL) over gravel or gravelly coarse textured (S, LS, SL, FSL) materials (includes cobbly and stony variations) on very coarse (S-LS) to medium (L, SiL, VFSL) textured stratified sediments deposited by water on coarse textured (S, LS, SL, FSL) materials over medium (L, SiL, VFSL) or moderately fine (SCL, CL, SiCL) textured materials (not till) on coarse textured (S, LS, SL, FSL) materials (not till) over fine textured (C, SiC, HC) materials (not till) on moderately coarse textured (SL, FSL) sediments deposited by wind or water on medium textured (L, VFSL) sediments deposited by wind and water on medium textured (L, SiL, VFSL, SCL, CL, SiCL) over gravel or gravelly coarse textured (S, LS, SL, FSL) materials (includes cobbly and stony variations) on medium textured (L, SiL, VFSL, SCL, CL, SiCL) materials (not till) over fine textured (C, SiC, SC, HC) materials (not till) on medium textured (L, SiL, VFSL, SCL, CL, SiCL) over coarse textured (S, LS, SL, FSL) undifferentiated materials on moderately fine textured (CL, SCL, SiCL) sediments deposited by water on fine textured (C, SiC) water-laid sediments on fine textured (C) water-laid sediments with till-like features on fine textured (C, SiC, SC, HC) over medium textured (L, SiL, VFSL, SCL, CL, SiCL) materials (not till) on very fine textured (HC) water-laid sediments
C0 M0 F0 U0	on coarse textured (S, LS, SL) undifferentiated materials on medium textured (L, SiL, VFSL, SCL, CL, SiCL) undifferentiated materials on fine textured (C, SiC, HC) undifferentiated materials on undifferentiated materials
L7 L19 L8 L16	on coarse textured (S, LS, SL, FSL) materials (not till) over softrock on gravelly medium textured (L, SiL, VFSL, SCL, CL, SiCL) materials over softrock on medium textured (L, SiL, VFSL, SCL, CL, SiCL) materials (not till) over softrock on fine (C, SiC, SC) to very fine (HC) textured materials (not till) over softrock
C6 M5 F5 C7	on coarse textured (S, LS, SL) softrock on medium textured (L, CL) softrock on fine textured (C, SiC) softrock on coarse grained bedrock
L11 L12 L13 P1 P2 P3	on undifferentiated peat over coarse textured (S, LS, SL, FSL) undifferentiated materials on undifferentiated peat over medium textured (L, SiL, VFSL, SCL, CL, SiCL) undifferentiated materials on undifferentiated peat over fine textured (C, SiC, SC, HC) undifferentiated materials on Sphagnum Peat on Fen Peat on Forest Peat

Appendix B

Code descriptions for Alberta Soil Names File (Generation 3)

SERIES

Description: Series/soil name is a nomenclature for identifying types of soils on the basis of detailed features of the pedon. It may include a variant (two to four uppercase letters). A pedon is a real unit of soil in the landscape.

Type: 24 character alpha

Range: Any alpha characters

Examples: Bingville, Bingville-GR

NEW_SYMBOL

Description: A three letter code (soil code) in upper case representing the series and may include a variant (two to four lowercase letters).

Type: 7 character alpha - 3 letter for soil code and 2 to 4 letters for variant

Range: Any alpha characters

Examples: BVL, BVLgr

VARIANT

Description: Two to four letter code used to indicate soil variations. The variant applies to the series and the soil code.

Type: 2 to 4 character alpha

Range: see table

Example: aagl

Correlation Table VARIANT

VARIANT	DEFINITION
aa	Not modal soil correlation area
aagl	Not modal soil correlation area and gleyed (see gl)
aapt	Not modal soil correlation area and peaty (see pt)
aasa	Not modal soil correlation area and saline (see sa)
aast	Not modal soil correlation area and stony (see st)
aaxl	Not modal soil correlation area and overlying lithic (see xl)
aaxp	Not modal soil correlation area and overlying paralithic (see xp)
aaxt	Not modal soil correlation area and overlying till (see xt)
ca	Calcareous – soil with primary alkaline earth carbonates in the B horizon (Bmk)
cagl	Calcareous and gleyed (see gl)
caxt	Calcareous and overlying till (see xt)

cazr	Calcareous and rego (see zr)
cb	Cobbly
co	Coarse – greater than 10% coarse fragments or one textural group coarser than modal
cr	Carbonated – soil with secondary carbonates throughout the profile
crsa	Carbonated and saline (see sa)
crzr	Carbonated and rego (see zr)
cu	Cumulic – contains a buried Ah
cugl	Cumulic and gleyed (see gl)
cy	Cryic
er	Eroded – B horizon has been cultivated
ersa	Eroded and saline (see sa)
fi	Fine – one textural group finer than modal
gl	Gleyed – poor drainage and periodic reduction
glsa	Gleyed and saline (see sa)
glxc	Gleyed and overlying clay (see xc)
glxp	Gleyed and overlying paralithic (see xp)
glxt	Gleyed and overlying till (see xt)
glzr	Gleyed and rego (see zr)
glzs	Gleyed and solodic (see zs)
gr	Gravelly – 20-50% coarse fragments (>2 mm - 7.5 cm) by volume
grxc	Gravelly and overlying clay (see xc)
ob	Overblown
ow	Overwash
pt	Peaty – an organic horizon (> 17% organic carbon) which is > 10 cm thick
ptxc	Peaty and overlying clay (see xc)
sa	Saline, electrical conductivity (EC) is > 4 mS/cm
sazr	Saline and rego (see zr)
sc	Saline subsoil, electrical conductivity (EC) is > 4 mS/cm in the subsoil
scxt	Saline subsoil and overlying till (see xt)
st	Stony – 20-50% coarse fragments (>25 cm diameter) by volume
stxc	Stony and overlying clay (see xc)
stxp	Stony and overlying paralithic (see xp)
ta	Thin A horizon – less than 10 cm
tk	Thick A horizon – usually used when A is greater than “normal soils” of the area
xc	Clay at 30-99 cm
xczb	Clay at 30-99 cm and Brunisolic
xg	Gravel at 30-99
xl	Lithic at 30-99 cm (profile has R horizon), hard rock
xp	Paralithic at 30-99 cm (profile has 2C horizon), soft rock
xs	Sand at 30-99 cm
xt	Till at 30-99 cm
xu	Undifferentiated material at 30-99 cm
xz	Permafrost at 30-99 cm
yc	Clay at 100-200 cm

yg	Gravel (20-50% coarse fragments (>2 mm - 7.5 cm) by volume) at 100-200 cm
yp	Paralithic at 30-99 cm
yt	Till at 100-200 cm
yz	Permafrost at 100-200 cm
zb	Brunisolic
ze	Eluviated
zf	Fibric
zg	Gleyed Rego
zh	Humic – soils with dark-colored A horizon at least 10 cm thick
zl	Luvisolic
zm	Mesic
zr	Rego/Regosolic
zs	Solodic – soils where the hard B horizon is degrading, has AB and Bnt horizons
zt	Solonetzic
zz	Atypical Subgroup
zbr	Brown Soil Zone – used only with “Miscellaneous” soils such as ZCO, ZER, ZFI, ZSZ,& ZNA.
zdb	Dark Brown Soil Zone – used only with “Miscellaneous” soils such as ZCO, ZER, ZFI, ZSZ,& ZNA
zbl	Black Soil Zone – used only with “Miscellaneous” soils such as ZCO, ZER, ZFI, ZSZ,& ZNA
zdg	Dark Gray Soil Zone – used only with “Miscellaneous” soils such as ZCO, ZER, ZFI, ZSZ,& ZNA
zzxt	Atypical subgroup and overlying till (see xt)
yl	Lithic at 100-200cm
glsc	Gleyed and saline subsoil (see sc)
cogl	Coarse-greater than 10% coarse fragments or one textural group coarser than modal and gleyed (see gl)
brsa	Brown Soil Zone saline
dbsa	Dark Brown Soil Zone saline
blsa	Black Soil Zone saline

SCA

Description: Soil Correlation Area.

A geographic area of the province defining the area where the series may be used.

Type: 2 character numeric

Range: 1 - 24

Example: 1

CALCAR

Description: Refers to first C horizon (but not Cca) may be first or second parent material type. Calcareous classes are estimated in the field by degree of effervescence obtained with 10% HCl. Actual CaCO₃ equivalent values as determined in the lab define the classes on the amount of carbonates present expressed as CaCO₃ equivalent. An approximation of the class can be made by noting the effervescence obtained with 10% HCl.

Type: 1 character alpha

Range:	N - Noncalcareous	<1
	W - Weakly	1 - 5
	M - Moderately	6 - 15
	S - Strongly	16 - 25
	V - Very Strongly	26 - 40
	E - Extremely	>40

Example: W

SALINITY

Description: Refers to the electrical conductivity (mS/cm) of the most saline parent material (1 or 2).

Type: 1 character alpha

Range:	N - Non to very weakly	<4
	W - Weakly	4 - 8
	M - Moderately	8 - 15
	S - Strongly	>15

Example: W

MAS_PM

Description: Parent material and texture code.

Type: 4 character alphanumeric

Range: see table

Example: C0

Correlation Table MAS_PM

MAS_PM	DEFINITION
Coarse textured materials	
C0	Coarse textured (S, LS, SL) material (undifferentiated)
C1	Gravels or gravelly (cobbly/stony) coarse textured material
C2	Very coarse (S, LS) sediments deposited by wind or water
C3	Moderately coarse (SL, FSL) sediments deposited by wind or water
C4	Very coarse textured till (Till name)
C5	Moderately coarse textured tills (Till name)
C6	Coarse textured (S, LS, SL) softrock
C7	Coarse grained bedrock
Medium textured materials	
M0	Medium textured (VFSL, L, SiL, SiCL, CL, SCL) materials (undifferentiated)
M1	

M2	Medium textured (L, VFSL) sediments deposited by wind and water
M3	Moderately fine textured (CL, SCL, SiCL) sediments deposited by water
M4	Medium textured (L to CL) till (Till name)
M5	Medium textured (L to CL) softrock
M6	Gravelly and stony medium textured till
Fine textured materials	
F0	Fine textured (C, SiC, HC) materials (undifferentiated)
F1	Fine textured (C, SiC) water-laid sediments
F2	Very fine textured (HC) water-laid sediments
F3	Fine textured (C) water-laid sediments with till-like features
F4	Fine textured (C) till (Till name)
F5	Fine textured (C, SiC) softrock
Layered materials (change occurs between 30 and 100 cm)	
L1	Gravel or gravelly coarse over medium or fine textured till (includes cobble and stony variations)
L2	Coarse textured (S, LS, SL) over medium or fine textured till
L3	Medium textured (VFSL, L, SiCL, CL) over medium or fine textured till
L4	Coarse textured over gravel or gravelly coarse (includes cobble and stony variations)
L5	Medium textured over gravel or gravelly coarse (includes cobble and stony variations)
L6	Till (Till name) over softrock
L7	Coarse (not till) over softrock
L8	Medium (not till) over softrock
L9	Coarse (not till) textured over fine or very fine (not till)
L10	Medium (not till) textured over fine or very fine (not till)
L11	Peat (any) over coarse textured
L12	Peat (any) over medium textured
L13	Peat (any) over fine textured
L14	Fine textured (not till) over medium to moderately fine textured till
L15	Very fine textured (not till) over medium to moderately fine textured till
L16	Fine to very fine textured (not till) over softrock
L17	Gravelly (includes stony variations) medium textured material over medium or fine textured till
L18	Medium textured material over coarse textured material
L19	Gravelly medium textured material over softrock
L20	Coarse textured over medium or moderately fine (not till)
L21	Gravelly coarse textured over medium or moderately fine (not till)
L22	Fine (not till) over medium (not till)
Peat Material	
P1	Sphagnum Peat
P2	Fen Peat
P3	Forest Peat
Undifferentiated Material	
U0	Undifferentiated

PM1_TEX

Description: The texture of the C horizon; but with layered parent materials, PM1_TEX is the texture of the first material below the A horizon.

Type: 5 character alpha

Range: Texture

CT-Coarse Textured Group

MC - Moderately coarse textured: sandy loam and fine sandy loam

VC - Very coarse textured: sand and loamy sand

MT-Medium Textured Group

ME - Medium textured: loam, silt loam and very fine sandy loam

MF - Moderately fine textured: sand clay loam, clay loam and silty clay loam

FT-Fine Textured Group

FI - Fine textured: clay, silty clay and sandy clay

VF - Very fine textured: heavy clay (more than 60% clay)

O-Organic (peat) Group

VT-Variable Texture (not differentiated)

Modifiers

GR - Gravelly (20 - 50% by volume), >2 mm - 7.5 cm

CB - Cobbly (20 - 50% by volume), 7.5 cm - 25 cm

ST - Stony (20 - 50% by volume), 25 cm - 60 cm

VG - Very Gravelly (> 50% by volume), >2 mm - 7.5 cm

VB - Very Cobbly (> 50% by volume), 7.5 cm - 25 cm

VS - Very Stony (> 50% by volume), 25 cm - 60 cm

Examples: STMF, ME

PM1_TYP

Description: Refers to the genetic origin of the first material or a description of key characteristics of it. Has texture attached as PM1_TEX.

Type: 4 characters alpha

Range: see table

Example: GLLC

Correlation Table PM1_TYP

PM1_TYP	DEFINITION
-	Not applicable
ANTH	Anthropogenic
BRCG	Bedrock, conglomerate (lithic)
BRGR	Bedrock, granitic (lithic)
BRLS	Bedrock, limestone (lithic)
BRSH	Bedrock, shale (lithic)

BRSS	Bedrock, sandstone (lithic)
BRUN	Bedrock, undifferentiated (lithic)
COLL	Colluvial
EOLI	Eolian
FLEO	Fluvioeolian (fluvial or eolian)
FLUV	Fluvial
FNPT	Fen Peat (Sedge peat)
FOPT	Forest Peat (Bog peat)
GLFL	Glaciofluvial
GLLC	Glaciolacustrine
GLTL	Glaciolacustrine (till-like features, "lacstro-till")
LACU	Lacustrine (post-Pleistocene)
PGFL	Preglacial Fluvial (e.g. Tertiary gravels)
SEPT	Sedimentary Peat
SPPT	Sphagnum Peat
SRFS	Softrock, fine, saline-sodic (paralithic)
SRCN	Softrock, coarse, not saline-sodic (paralithic)
SRFN	Softrock, fine, not saline-sodic (paralithic)
SRUN	Softrock, undifferentiated (paralithic)
TILL	Till (Morainal)
UNDM	Undifferentiated mineral
UNDO	Undifferentiated organic

PM2_TEX

Description: The texture of the C horizon; but with layered parent materials, PM2_TEX is the texture of the second material.
 Type: 5 character alpha
 Range: Same as PM1_TEX

PM2_TYP

Description: Refers to the genetic origin of the second material or a description of key characteristics of it. Has texture attached as PM2_TEX.
 Type: 4 characters alpha
 Range: Same as PM1_TYP

ORDER

Description: Soil Order
 Type: 2 character alpha
 Range: See table
 Example: CH

Correlation Table ORDER

ORDER	DEFINITION
BR	Brunisolic
CH	Chernozemic
CY	Cryosolic
GL	Gleysolic
LU	Luvisolic
OR	Organic
PZ	Podzolic
RG	Regosolic
SZ	Solonetzic
VE	Vertisol

SG

Description: Soil Subgroup and Great Group in one field. Characters before the dot (.) are the Subgroup and characters after the dot represent the Great Group.

Type: 8 characters alpha

Range: See table

Example: GLDG.SO

Correlation Table SG

SG	DEFINITION

CORRNOTE

Description: General comments for public use.

Type: Memo 10 characters alpha

Range: Any description that would help users of the Alberta Soil Names File.

Example: SOILNAME - FALUN - CORRNOTE: On Paskapoo till use with Modeste, Breton and Benalto.
