## Mineral Potential Series

A Mineral Potential Series publication consists of a dataset compiled to highlight an area or a commodity of perceived interest to the mineral exploration community. Its intent is to provide a snapshot of the latest data relating to a given target of exploration or geographic area, presented in a context which aids interpretation, and to attract interest to under-explored areas within the NWT.

## Educational Publication

Educational Publications are intended for a non-geological audience. Their content ranges from scientific to non-scientific. They may contain previously published data presented in a new form, or original data collected specifically for the Educational Publication, but will not contain original scientific material which is intended for later publication elsewhere.

## Open Reports

Open Reports are releases of raw data or uninterpreted data. The data have not been subjected to rigorous review; the intent is to make information available to the public in a timely manner, and allow access to geoscience data that might not otherwise be released. On January 1, 2002 the series name changed from EGS (Economic Geology Series) Open Reports to NWT Open Reports.

## Open Files

Open Files are generally final reports or maps summarizing results of geoscience research undertaken by the NTGO or one of its partners. Open Files are subjected to two rounds of reviews: an initial scientific (generally internal and external) review of data, interpretations and conclusions for content, and a final technical review for content and format. The current standards for Open Files have been in place since 1999. On January 1, 2002 the series name changed from EGS Open Files to NWT Open Files. Many EGS Open Files published prior to 2002 were preliminary maps, and those published prior to 1999 did not follow the same review procedure. Note: Some EGS Open Files and NWT Open Files are distributed only on disk. Most paper publications have been scanned and can therefore be ordered on disk. Please contact the Library for further information.

## Miscellaneous

"Contributions to the Geology of the Northwest Territories" is a series of volumes published in 1984, 1985, and 1988. Exploration Overviews are compiled annually by staff; request these by year. Beginning in 2000, the area covered in the Overview was the reduced area of the new Northwest Territories. Until 1997 these included the collected abstracts of presentations to the Yellowknife Geoscience Forum. Yellowknife Geoscience Forum abstracts volumes are compiled annually by staff. They were published by staff except in the years 1997-2001 when they were published by the NWT Chamber of Mines. Until 1997 the collected abstracts and the annual Exploration Overview were included in one document. Request by year. The Mineral Industry Report was published annually to biannually by DIAND NWT Geology Division for the years 1969/70 to 1988/89. This series has been discontinued but previous years are still available. Each volume contains summaries of exploration activities and key results by property and area, indexed by NTS.
