- 12.5.1 A Party shall, before taking any action for management of wildlife in Wek'èezhì, including such actions as set out in a management plan, submit its proposals to the Wek'èezhì Renewable Resources Board for review under 12.5.4. These proposals may include provisions respecting such matters as protection or enhancement of habitat, research, identification and reporting requirements, monitoring, total allowable harvest levels, limitations on methods of harvesting and other limitations on harvesting activities, allocations of any total allowable harvest levels, designation of species or stocks at risk and identification of lands where harvesting or access for harvesting is prohibited for safety purposes. The Board may identify types of actions that need not be sent to it for review. In preparing any proposal, a Party shall consult with any other Party or other body with powers to manage any aspect of the proposal.
- 12.5.2 12.5.1 does not prevent a Party from establishing identification requirements in relation to wildlife harvested, harvesters or persons in possession of wildlife without first submitting them as proposals to the Wek'èezhì Renewable Resources Board for review under 12.5.4. In order to facilitate co-ordination, each Party shall consult with the other Parties before establishing such identification requirements.
- 12.5.3 Any wildlife management plans, limits on wildlife harvesting or regulations respecting wildlife harvesting or other wildlife activities in existence before the effective date remain in effect until replaced, amended or removed under 12.5.

If a Party wishes the Board to make its determination or recommendation within a particular period of time, it shall specify that period when submitting its proposal.
- 12.5.14 Notwithstanding 12.5.1, a Party may, to the extent of its powers under legislation or Tłchq laws, take any action for the management of wildlife in Wek'èezhì, in an emergency, without waiting for a determination or recommendation of the Wek'èezhì Renewable Resources Board, but if it does so the Party shall notify the Board and the other Parties as soon as possible, with reasons for taking such action.

19.6.1 Where the clean-up under 18.3.1 of a contaminated site on or surrounded by Tłchq lands is conducted by government or by a person, including the Tłchq Government, under contract with or funded by government, the government or person conducting the clean-up shall, for that purpose, have a right of access to the Tłchq lands and waters overlying such lands and a right to use specified substances or other natural resources on Tłchq lands to the extent necessary to conduct the clean-up.

19.6.2 There shall be no rental, fee, charge or other compensation payable for the exercise of the right of access or for the use of specified substances or other natural resources under 19.6.1 or for any cost incurred by the Tłchq Government in relation to the resources or access.

OBLIGATIONS ADDRESSED:

18.4.1 The Government of Canada shall survey the boundaries of Tłıchǫ lands in accordance with the instructions of the Surveyor General and the *Canada Lands Survey Act* within the time specified in the Implementation Plan.

18.4.2 The Government of Canada shall be responsible for the cost of the survey conducted under 18.4.1.

18.4.3 During the survey conducted under 18.4.1,

(a) those portions of seismic lines and other artificial features used as reference points for the boundaries of Tłıchǫ lands shall be monumented by government sufficiently, as determined by the Surveyor General, to define their location; and

(b) natural features used as reference points for boundaries of Tłıchǫ lands shall be photographed by government.

18.4.4 Where the map described in part 1 of the appendix to this chapter indicates that a part of a boundary of Tłıchǫ lands is defined by reference to natural features but, during the survey conducted under 18.4.1, it is found that the natural features

(a) are not well defined;

(b) do not exist; or

(c) are not located, in relation to other features used as reference points for the boundaries of Tłıchǫ lands, where the map indicates they would be,

the Surveyor General shall have the authority, in consultation with the Parties, to mark that part of the boundary on the ground and show it on the plan of survey in a location that reflects as closely as possible the intention of the Parties when the map was finalized.

18.4.5 During the survey conducted under 18.4.1, the Surveyor General, in relation to the boundaries of Tłıchǫ lands adjacent to the Yellowknife Highway as shown on NTS mapsheets 85 J/11, 85 J/12, 85 J/13 and 85 K/9 of the map described in part 1 of the appendix to this chapter, need not follow the exact location of the boundaries as shown on that map but shall mark the boundaries on the ground and show them on the plan of survey so that

(a) the boundary on one side of that highway is parallel to the boundary on the other side of the highway;

- (b) the two boundaries are 60 metres apart; and
- (c) the highway is approximately centred between the two boundaries to the extent practical.

18.4.6 The Tłchq Government shall be responsible for the cost of surveys associated with the leasing and subdivision of Tłchq lands.

18.4.7 Boundaries of Tłchq lands that are defined by reference to natural features shall change with the movements of the natural features as long as these movements are gradual and imperceptible from moment to moment.

18.5.1 The Government of Canada shall submit to the Registrar of Land Titles for the Northwest Territories, for registration, the plan of survey of the boundaries of Tłchq lands prepared under 18.4.1 as soon as possible after the plan has been signed by representatives of the Parties, signifying their acceptance of it. Upon submission of the plan in the required form, the Registrar shall register it.

18.5.2 The Tłchq Government has a right to obtain a certificate of title of Tłchq lands after the plan of survey prepared under 18.4.1 has been registered, upon making a request in the form prescribed by legislation.

18.5.3 Subject to 18.5.4, upon the registration of the plan of survey prepared under 18.4.1, the surveyed boundaries of Tłchq lands replace the description of the boundaries of Tłchq lands shown on the map described in part 1 of the appendix to this chapter, as of the effective date.

RELATED CLAUSES: 18.5.4, appendix to chapter 18 (part 1, part 2)

FUNDING:

1. The Government of Canada shall be responsible for the cost of the survey conducted under 18.4.1, and the Tłchq Government shall be responsible for the costs of surveys associated with the leasing and subdivision of Tłchq lands, in accordance with 18.4.6.

PLANNING ASSUMPTIONS:

1. Registration of title under 18.5 would also have to include interests registered against the title.
2. The survey program identified in Activity 1, pursuant to 18.4.1, is as follows:

Tłchq Lands Survey Implementation Plan

The Tłchq Lands Survey plan is scheduled to last 8 years, in order to economically advantage the Tłchq communities as much as possible during the execution of the land survey.

YEAR 1

As the Tłchq Agreement requires that this project be performed on the North American Datum of 1927 (NAD27). The most economical way to ensure the desired accuracy for the overall survey is to establish ground control, in year 1, for use throughout the entire 8-year project. As near to the effective date as possible, it would be important to prepare an aerial photography of all the Tłchq lands boundaries including the Yellowknife highway. Targeting control points will also be necessary. Targeting the control points will provide important quality control for the aerial photography and will provide increased economy overall in the project. Strategic locations will be selected that could also be targeted for use in quality control for the aerial photography.

(Estimated number - 1 control point per 10km of boundary for a total boundary of 2900 km.)

YEAR 2

It is proposed in year 2 to do the field survey and monumentation of the Tłchq lands defined by the right of way calculated from the centreline of the Yellowknife highway; It is also recommended to do the field survey and monumentation of the boundaries of the *Advanced Exploration Sites* and the *Hazardous Waste Sites*.

Note that the highway will NOT be surveyed within Tłchq Community Lands.

In respect to the mineral claims, the existing surveys of mineral claims recorded in the Canada Lands Surveys Records that are not “confirmed” by the Surveyor General must be inspected on the ground prior to use on the Tłchq lands survey plans. This also means that non-CLS monumentation will be replaced with satisfactory monuments. Boundaries of mineral claims that were not measured directly (i.e. traversed and shown as calculated in the Field Notes) and form boundaries of Tłchq lands shall be cut out. All mineral claim boundaries not previously surveyed will be surveyed according to the Canada Mining Regulations, except that all boundaries of Tłchq lands will be cut out.

YEAR 3

Proposed in year 3 is the field survey and monumentation of the Tłchq lands near Tłchq communities.

The aerial photography flown in year 1 should be at a larger scale for the communities. In year 3 an orthophoto map product should be prepared covering the entire parcel for each community. Orthophoto map products (1:10,000) should be prepared for delineation and depiction of all natural boundaries and filed as part of the Field Notes of the survey of Tłchq lands. Monumentation in the field should be put in inter-visible (used average separation of 550m).

Monuments will be placed at intervals not exceeding one kilometre.

Marker posts will be placed at all monuments.

Monuments will be placed on either side of water bodies that are greater than 500m in width. Note that short artificial boundary monuments will also require 3 ancillary monuments.

YEAR 4

Proposed in year 4 would be the field survey and monumentation of the general South boundary of Tłchq lands. There will be a preliminary determination of the location of the natural boundaries by a photogrammetrist, assisted by a CLS, done prior to entering the field; then ground truthing can commence with orthophotos in hand. As part of the Tłchq boundary is comprised to a large extent by the natural boundaries (lakes and rivers) and that the existing mapping of this area is on average 25 to 40 years old and as that the Ordinary High Water Mark of most large lakes used to describe the boundaries has probably not changed considerably due to the nature of the land (Canadian Shield), there will be sections of natural boundary that will not be suitable as a boundary. This will be determined by a Canada Lands Surveyor through site inspection as smaller lakes and streams are questionable for use as legal definition for Tłchq lands. Unacceptable sections of natural boundary will necessarily be replaced with a rectilinear boundary that approximates the position of the feature shown on the 1:50,000 maps used to describe Tłchq lands. There are many short isolated sections of artificial boundary used to connect natural features (across rivers or narrow lake channels). These short boundaries require only two monuments and therefore must include substantial ancillary monumentation. Each short section must also have independent spatial ties and check-measurements. Here again, monuments will be inter-visible (used average separation of 550m) and monuments will be placed at intervals not exceeding one kilometre and marker posts will be placed at all monuments.

YEAR 5

Proposed in year 5 would be the field survey and monumentation of the general East boundary of Tłchq lands. There will be a preliminary determination of the location of the natural boundaries by a photogrammetrist, assisted by a CLS, done prior to entering the field; then ground truthing can commence with orthophotos in hand. As part of the Tłchq boundary is comprised to a large extent by the natural boundaries (lakes and rivers) and that the existing mapping of this area is on average 25 to 40 years old and as that the Ordinary High Water Mark of most large lakes used to describe the boundaries has probably not changed considerably due to the nature of the land (Canadian Shield), there will be sections of natural boundary that will not be suitable as a boundary. This will be determined by a Canada Lands Surveyor through site inspection as smaller lakes and streams are questionable for use as legal definition for Tłchq Lands. Unacceptable sections of natural boundary will necessarily be replaced with a rectilinear boundary that approximates the position of the feature shown on the 1:50,000 maps used to describe Tłchq Lands. There are many short isolated sections of artificial boundary used to connect natural features (across rivers or narrow lake channels). These short boundaries require only two monuments and therefore must include substantial ancillary monumentation. Each short section must also have independent spatial ties and check-measurements. Here again, monuments will be inter-visible (used average separation of 550m) and monuments will be placed at intervals not exceeding one kilometre and marker posts will be placed at all monuments.

YEAR 6

Proposed in year 6 is the field survey and monumentation of the general North boundary of Tłchq lands; There will be a preliminary determination of the location of the natural boundaries by a photogrammetrist, assisted by a CLS, done prior to entering the field; then ground truthing can commence with orthophotos in hand. As part of the Tłchq boundary is comprised to a large extent by the natural boundaries (lakes and rivers) and that the existing mapping of this area is on average 25 to 40 years old and as that the Ordinary High Water Mark of most large lakes used to describe the boundaries has probably not changed considerably due to the nature of the land (Canadian Shield), there will be sections of natural boundary that will not be suitable as a boundary. This will be determined by a Canada Lands Surveyor through site inspection as smaller lakes and streams are questionable for use as legal definition for Tłchq lands. Unacceptable sections of natural boundary will necessarily be replaced with a rectilinear boundary that approximates the position of the feature shown on the 1:50,000 maps used to describe Tłchq lands. Here again, monuments will be inter-visible (used average separation of 550m) and monuments will be placed at intervals not exceeding one kilometre and marker posts will be placed at all monuments.

YEAR 7

Proposed in year 7 would be the field survey of the general West boundary of Tłchq lands. There will be a preliminary determination of the location of the natural boundaries by a photogrammetrist, assisted by a CLS, done prior to entering the field; then ground truthing can commence with orthophotos in hand. As part of the Tłchq boundary is comprised to a large extent by the natural boundaries (lakes and rivers) and that the existing mapping of this area is on average 25 to 40 years old and as that the Ordinary High Water Mark of most large lakes used to describe the boundaries has probably not changed considerably due to the nature of the land (Canadian Shield), there will be sections of natural boundary that will not be suitable as a boundary. There are many short isolated sections of artificial boundary used to connect natural features (across rivers or narrow lake channels). Here again, monuments will be inter-visible (used average separation of 550m) and monuments will be placed at intervals not exceeding one kilometre and marker posts will be placed at all monuments.

YEAR 8

Proposed in year 8 would be the survey of any remedial survey work identified in the previous 7 years. For example, sections identified by a Canada Lands Surveyor through site inspection where boundary problems need clarification for use as legal definition for Tłchq Lands.

Creation of a single plan, showing all boundaries of Tłchq lands, compiled from Survey Field Notes and existing CLSR Plans, will be prepared.

The plan will be in an Atlas format. The plan will have individual sheets at a scale of 1:50. The plan will be recorded in the Canada Lands Survey Records and will be registered at the Land Titles office.

4. Request the Auditor General/Audit Bureau to verify the annual statements	NAP, MACA	following request from the Tłchq

OBLIGATIONS ADDRESSED:

- 25.1.1 Government shall pay to the Tłchq Government, in relation to each calendar year, an amount equal to
- (a) 10.429 percent of the first \$2.0 million of mineral royalties received by government in that year; and
 - (b) 2.086 percent of any additional mineral royalties received by government in that year.
- 25.1.2 Amounts payable by government under this chapter shall be calculated on the basis of amounts due to and received by government in respect of minerals produced after the date of the Agreement.
- 25.1.3 Payments remitted to the Tłchq Government shall be in quarterly instalments.

- 25.1.4 Government shall annually provide to the Tłchq Government a statement indicating the basis on which mineral royalties were calculated for the preceding year.
- 25.1.5 On the request of the Tłchq Government, government shall request the Auditor General to verify the accuracy of the information in the annual statements.

RELATED CLAUSES: 1.1.1 (“date of the agreement”, “mineral”, “royalty”), 18.7,
27.1.1 (“Tłchq capital (c)”))

PLANNING ASSUMPTIONS:

1. Royalties will be paid quarterly based on the amount actually received by government in the previous quarter.
2. Mining royalties are received not later than 4 months after the end of a mine's fiscal year end (usually during April, since most mines use December 31 as year end). Therefore, where mining royalties for 2005 are received in April, 2006, the payment to the Tłchq will be made during the quarterly payment which follows the receipt of the payment.
3. If, after an audit conducted by DIAND or GNWT, government receives additional royalties the payment to the Tłchq will be calculated and paid on the basis of the year for which those royalties were due (i.e. if an audit in 2007 finds an amount due to government for 2005 the payment to the Tłchq will be calculated on the basis that the payment is for 2005). When, under legislation, government receives interest on late or overdue payments of royalties by producers, any such receipts will be considered as amounts due to and received by government and the Tłchq will receive the appropriate amounts. Nothing in this paragraph is intended to prevent any proper claims for interest by the Tłchq in other cases.
4. If, after an audit, DIAND or GNWT owes a refund to a company, the appropriate percentage will be deducted from the next quarterly payment to the Tłchq based on the royalties received for the year for which the refund was owed.
5. When asked to verify the accuracy of the information in the annual statements, the Auditor-General or Audit Bureau will verify whether the figures used (i.e. amounts of royalty received by the Crown, calculation of the Tłchq share) are correct.
6. In the case of royalties being received for a period which straddles the year for which the Tłchq share is paid, or in the case of a partial year after settlement legislation, the royalties will be apportioned on a prorated basis (i.e. based on days in the period for which the royalty was paid).
7. When the total value of mineral royalties received by government in a year exceeds \$2 million, then the payments made by each of Canada and the Government of the Northwest Territories at the respective rates shall be in proportion to the amounts received by each government.

PART 5. ANNUAL ADJUSTMENT:

A. Annual Calculation of Net Transfer Amounts

The Annual Price Adjustment Factor (APAF) to be applied for a fiscal year is equal to the quotient obtained by taking the Final Domestic Demand Implicit Price Index (FDDIPI), for the third quarter of the calendar year immediately preceding the calendar year in which the new fiscal year for which the adjustment is being made begins, and dividing it by the FDDIPI for the third quarter of the calendar year prior to the immediately preceding calendar year.

The FDDIPI values used to calculate the Annual Price Adjustment Factor which is to be applied to determine the Funding Amount for a particular fiscal year will be the FDDIPI published by Statistics Canada immediately following the end of the third quarter of the calendar year immediately preceding the calendar year in which the particular fiscal year commences. In the event that there is a delay in publishing the third quarter statistics, then the Annual Price Adjustment Factor from the previous year, or an estimate as otherwise agreed by the Implementation Committee, may be used until the statistics are available, and any subsequent adjustments will be made prior to the disbursement of the next scheduled payment.

New fiscal year Funding Amount (FA) = previous year Funding Amount multiplied by the Annual Price Adjustment Factor (APAF), or

$$FA_y = FA_{y-1} \times APAF$$

where:

$$APAF = FDDIPI_{3Q_{y-1}} / FDDIPI_{3Q_{y-2}}$$

and where:

FDDIPI_{3Qy-1} is the first published value of FDDIPI for the third quarter of the calendar year immediately preceding the calendar year in which the new fiscal year begins; and

FDDIPI_{3Qy-2} is the value of FDDIPI for the third quarter of the calendar year prior to that immediately preceding (y-1) calendar year, which is published in the same publication and at the same time as the FDDIPI value used for 3Qy-1.

Once an Annual Price Adjustment Factor has been calculated, the result shall be final and shall not be subject to revisions, unless otherwise agreed by the Parties. For greater certainty, subsequent revisions, rebasing or other changes to FDDIPI figures used to calculate the Annual Price Adjustment Factor for fiscal years of this agreement shall not result in adjustments to the Annual Price Adjustment Factor for previous fiscal years.

B. Periodic or Irregular Payment Amounts

Where there are line items in a budget which do not appear in each consecutive year, then the Annual Price Adjustment Factor, as calculated above, shall be applied, cumulatively and unchanged, to determine the adjusted amount for any year in which that item appears.

C. Calculation of Effective Year (only) Funding Amounts

Funding amounts shown in 2002 dollars will be adjusted, to determine the funding for the effective year in accordance with the following calculation:

- for this one-time adjustment only, the adjustor will be the change in FDDIPI which would have applied as of April 1 of the effective year (i.e. third quarter of EY-1), over FDDIPI for the third quarter of 2001.

$$\text{One-time adjustor} = \text{FDDIPI}_{3\text{QEY-1}} / \text{FDDIPI}_{3\text{Q}2001}$$

using both FDDIPI values appearing in the same publication which contains the latest available annual value of FDDIPI.

Note: "FDDIPI" as used in this Implementation Plan refers to the *Canada Final Domestic Demand Implicit Price Index* as published regularly by Statistics Canada for the third quarter, on or about November 30 of each year, in CANSIM II Table 380-0003, Series D100466, and printed in Catalogue Number 13-001, matrix 10512, labelled as "Canada Implicit price index; Final Domestic Demand," or any successor index or publication.
