

**VETERINARY HEALTH CERTIFICATE
EXPORT OF PORCINE SEMEN TO THAILAND**

SECTION I - Origin

- i) Country of Origin : **CANADA**
- ii) Competent Issuing Authority : **Canadian Food Inspection Agency
Government of Canada**
- iii) Name of Exporter : _____
- iv) Address : _____

- v) Name of Semen Production Centre : _____
- vi) Address : _____

- vii) Semen Production Centre Registration Number or Identification Code : _____
- viii) Method and degree of dilution of semen: _____

- viii) Preservatives and antibiotics used: _____

SECTION II - Destination

- i) Name of Consignee : _____
- ii) Address : _____

SECTION IV - Health Certification

1. Country

According to the guidelines of the Office International des Epizooties (OIE) Canada is officially free of foot and mouth disease, swine vesicular disease, vesicular stomatitis, vesicular exanthema, classical swine fever, African swine fever, Aujeszky's disease, rinderpest, Teschen disease (porcine infectious encephalomyelitis) and vaccination against these diseases is prohibited. African swine fever and rinderpest did not occurred in Canada during the last three (3) years and were not present in Canada on certification date.

2. Semen Production Centre

- 2.1 The centre is approved by a Canadian Food Inspection Agency and is under the supervision of an official veterinarian. Semen production centres are inspected by the Canadian Food Inspection agency every six (6) months. The semen production centre meets the relevant criteria set out in the OIE International Animal Health Code.
- 2.2 All boars in the semen production meet the pre-isolation and isolation requirements stipulated in the OIE International Animal Health Code prior to entering the semen production centre.

3. Resident Animals

- 3.1 The semen production centre has been free of clinical cases of tuberculosis, brucellosis, leptospirosis, vesicular exanthema, vesicular stomatitis, swine vesicular disease, swine influenza, classical swine fever, Aujeszky's disease, porcine parvovirus, porcine reproductive and respiratory syndrome (PRRS), atrophic rhinitis, transmissible gastroenteritis (TGE) and Teschen disease during the twelve (12) months prior to the collection of the semen for export and has remained free of clinical cases of these diseases through the date of shipment of the semen to Thailand.

3.2 All the boars and teasers present in the semen collection centre were tested before pre-entry and during isolation period at the AI centre and were recognized to be free of brucellosis, tuberculosis, transmissible gastroenteritis, Aujeszky's disease and leptospirosis by Canadian animal health authorities. Resident boars are tested for the following diseases every six (6) months, with negative results, in accordance with official Canadian standards for semen production centres :

- Brucellosis - serum tube agglutination test (TAT) and complement fixation (CF) test
- Aujeszky's disease - ELISA test
- tuberculosis - intradermal PPD bovine tuberculin test
- leptospirosis - micro-agglutination test for serotypes L. pomona and L. Sejroe
- transmissible gastroenteritis - serum neutralization test (SN) or ELISA test

3.3 The resident boars from which the semen was collected were tested negative for porcine reproductive and respiratory syndrome (PRRS) by the centre authorities during the thirty (30) days preceding the semen collection.

4. Semen processing

The semen was collected, processed and stored in accordance with the relevant Appendix of the OIE International Animal Health code.
