

**VETERINARY HEALTH CERTIFICATE**
EXPORT OF SWINE TO THE REPUBLIC OF INDIA**EXPORTER:** _____

IMPORTER: _____

I, the undersigned Official Veterinary Officer, duly authorized by the Government of Canada, hereby certify that after due enquiry and to the best of my knowledge and belief, the animals described on this certificate fully comply with the sanitary conditions listed below:

1. The swine for export were born in Canada and have not been outside Canada, are over the age of two (2) months and have never been mated.
2. Canada is free from African swine fever, swine vesicular disease, foot-and-mouth disease, classical swine fever, enterovirus encephalomyelitis (Teschén disease), rinderpest, peste des petits ruminants, Rift Valley fever, Aujeszky's disease, vesicular stomatitis and porcine brucellosis..
3. The swine for export originate from farms or establishments where no cases of porcine cysticercosis, atrophic rhinitis of swine, porcine brucellosis, trichinellosis, transmissible gastroenteritis (TGE), and porcine reproductive and respiratory syndrome (PRRS) have not been reported during the last three (3) years, and no pig from a herd of inferior health status has been introduced into the breeding herd during that period.
4. During the past twelve (12) months there has been no diagnosis of atrophic rhinitis of swine, porcine cysticercosis, trichinellosis, TGE, PRRS, tuberculosis, swine influenza, swine dysentery, clinical dermatosis vegetans (hereditary defect), clinical eperythrozoon suis infection or leptospirosis on the farm of origin or on any farm on which the pigs have resided.
5. No case of rabies has been diagnosed for a period of twelve (12) months on any premises, or on any contiguous premises, on which the pigs have been resident during the twelve (12) months previous to export.
6. The animals were isolated from all others not of the same consignment during the thirty (30) days prior to export in a facility approved by the Canadian Food Inspection Agency, remained out of contact with any other animal not of tested equivalence until export, and during that period was tested for the following diseases with negative results:
 - a) tuberculosis - both avian and bovine tuberculin;
 - b) trichinellosis - ELISA or immunofluorescence;
 - c) transmissible gastroenteritis - serum neutralization tests, not earlier than fourteen (14) days after entering the pre-export isolation;
 - d) Eperythrozoon suis - indirect hemagglutination;
 - e) leptospirosis - micro-agglutination test.
7. The swine for export were injected with streptomycin (25 mg/kg) on two (2) occasions fourteen (14) days apart, the first being within forty-eight (48) hours of entering isolation.
8. At the time of entry and again immediately prior to departure from the pre-embarkation premises, the pigs were treated for lice and mange mites with dichlorvos at the rate of 15-30 mg per Kg of body weight or Levamisol at the rate of 7.5 mg per Kg of body weight with a maximum level of 150 mg.
9. The swine for export were treated with Ivermectin for internal parasites.
10. Each pig was examined in daylight within twenty-four (24) hours of entry and leaving the pre-export isolation facility and was found to be free from evidence of infectious and contagious disease and external parasites and was fit to travel.
