Importer _____

Address _____

I, the undersigned Official Veterinarian, duly authorized by the Government of Canada, hereby certify that, to the best of my knowledge and belief, the animals identified below meet the following requirements:

1. Canada is free from African swine fever, enzootic swine encephalomyelitis (Teschén disease), foot-and-mouth disease, Aujeszky's disease and swine vesicular disease for the past two (2) years and does not vaccinate for these conditions.
2. The animals have been part of their herds of origin for at least the last forty (40) days before shipping and during that time have been free from clinical enzootic pneumonia (mycoplasma).
3. The herds of origin of the animals and the area in a radius of thirty (30) kilometers has been free of classical swine fever.
4. The herds of origin of the animals were free from evidence of leptospirosis, bovine and avian tuberculosis, brucellosis and porcine reproductive and respiratory syndrome during the last twelve (12) months prior to export.
5. During the six (6) months prior to export, the herds of origin of the swine were free from Aujeszky's disease, transmissible gastroenteritis (TGE) and *Treponema hyodysenteriae* (*Serpulina hyodysenteriae*), porcine reproductive and respiratory syndrome (PRRS), atrophic rhinitis and *Actinobacillus pleuropneumoniae* (*hemophilus*).
6. During the thirty (30) days preceding export, the animals were subjected to the following tests with negative results:
 - a) tuberculosis - intradermal using bovine and avian tuberculin
 - b) brucellosis - an agglutination test (less than 30 I.U./ml) and complement fixation test (CFT)
 - c) leptospirosis - microagglutination test - *L. interrogans* (*mitis/bataviae*), *L. pomona*, *L. australis*, *L. tarrasovi* and *L. icterohaemorrhagiae*. Negative is less than 50% agglutination at 1:100;

or
the animals have been injected with an antibiotic effective against leptospires at the recommended dosage within the three (3) days prior to export (cross out non-applicable elements)
 - d) porcine reproductive and respiratory syndrome (PRRS) - ELISA or indirect immunofluorescence.
7. That the animals did not come into contact with reportable diseases on their way to the loading place.
8. That the feed and litter accompanying the shipment originates from areas of Canada where no case of foot-and-mouth disease or swine vesicular disease occurred within the past three (3) months.
9. The cleaning and disinfection of vehicles for transport was carried out to the satisfaction of the official veterinarian.
