

**VETERINARY HEALTH CERTIFICATE  
EXPORT OF SWINE TO SRI LANKA**

**EXPORTER** \_\_\_\_\_

**ADDRESS** \_\_\_\_\_

**IMPORTER** \_\_\_\_\_

**ADDRESS** \_\_\_\_\_

I, the undersigned official veterinarian, duly authorized by the Government of Canada, hereby certify that:

**1. Country origin**

Canada is free from foot and mouth disease, vesicular stomatitis, swine vesicular disease, African swine fever, classical swine fever, enterovirus encephalomyelitis, porcine brucellosis and Aujeszky's disease.

**2. Herd of origin**

- 2.1 The farm of origin has been free of any clinical evidence of atrophic rhinitis, transmissible gastroenteritis and swine erysipelas for a minimum period of one (1) year prior to export.
- 2.2 The farm of origin has had no clinical or other evidence of porcine reproductive respiratory syndrome (PRRS) during the past two (2) years prior to export.
- 2.3 No animal in the farm of origin has shown any clinical sign of contagious or infectious disease, including anthrax, rabies, leptospirosis, tuberculosis, Japanese B encephalitis, swine influenza, trypanosomiasis and dermatomycosis for a period of three (3) months immediately prior to transport.

**3. Details of the animals**

- 3.1 The animals have been identified by a permanent mark. If notches are used, a key/legend must be provided by the exporter to accompany the shipment.
- 3.2 The animals have been kept since birth in the country of origin.
- 3.3. The animals have not been in contact with any animal showing clinical sign of infectious or contagious disease including the diseases mentioned in paragraph 2.1, 2.2, 2.3 for a period of three (3) months immediately prior to embarkation.
- 3.4 During the isolation period, the animals were injected with dihydrostreptomycin twice at a dosage of 25 mg/kg of body weight with an interval of fourteen (14) days between injections or with long action tetracycline once at a dosage of 20 mg/kg.
- 3.5 The animals have been treated with an approved broad spectrum anthelmintic within seven (7) days immediately prior to shipment to eliminate internal helminths of pigs.
- 3.6. The animals have been treated with an approved acaricide within seven (7) days immediately prior to shipment to eliminate external parasites of pigs.
- 3.7 The animals have been examined on the day of embarkation; and found to be in a good state of health with no deformities, no clinical sign of any contagious and infectious disease and fit for transport.
- 3.8 The animals for export have been isolated for thirty (30) days in the farm of origin immediately prior to export, and during this period they had no direct physical contact with animals not destined for export.

**4. Testing**

The animals have been tested for the following diseases during the pre-export isolation and have been found to be negative to the appropriate tests.

- 4.1 Transmissible gastroenteritis: Serum Neutralisation test (SN) or ELISA
- 4.2 Leptospirosis: Microscopic Agglutination Test (MAT)
- 4.3 Bovine tuberculosis: The test must be performed in the posterior aspect of the base of the ear and the result should be read after 48 hours.
- 4.4 PRRS: ELISA or indirect immunofluorescence.
