Correctional Service Canada

September, 1998

SUMMARY

The focus of this report is a summary and presentation of recent trends involving male young offenders in Canada. It is an update to the original report, B-22, published in May, 1998. This version includes 1997 Uniform Crime Report data. The original report was written in response to a special request, and supplemented a presentation for the Heads of Corrections.

The three data sources used in compiling this report are the Uniform Crime Report Survey, the Youth Court Survey, and the Corrections Key Indicator Report, all published by the Canadian Centre for Justice Statistics. Where available, the analyses in this report examine male young offender trends over the past 6 years. The analyses are directed toward seven questions:

1. Has there been an increase in male youth charged by police, 1992-1997?

- There has been a consistent decrease at the national level.
- By offense category, there was a slight increase in violent crimes until 1995 when a decrease trend began ending with the 1997 rate equal to the 1992 rate. Property crimes decreased significantly and other offenses decreased until 1994, remaining relatively stable thereafter. Drug offenses increased until 1994, remaining stable at approximately 36 per 10,000 male youth.
- At the regional level, both the Prairie and Pacific regions experienced a consistent decrease. The rates remained fairly stable for the other regions. The 1997 rates were consistently lower than the 1992 rates.

2. Has there been an increase in male youth processed through the youth court system, 1991/92-1996/97?

- There has been a decrease at the national level.
- There was a consistent decrease of property crimes and other crimes, while crimes of violence increased slightly until the trend began to decrease in 1994/95. Young Offenders Act offenses peaked in 1993/94 and remained stable through to 1996/97. Following 1992/93, drug offences consistently increased until 1996/97.
- All regions experienced a decrease, except the Atlantic and Quebec regions which increased slightly from 1992/93 to 1996/97.

3. *Are male youth getting involved with crime at a younger age?*

- At the national level, male youth are not getting involved with crime at a younger age. A mean age of 15.5 has remained consistent from 1992/93 to 1995/96, increasing slightly in 1996/97 to 16.

4. *Are male youth getting more violent?*

- The Uniform Crime Report Survey (UCR) data suggests that the national rate of violent crime by male youth peaked in 1995 and decreased in subsequent years, remaining relatively stable at a rate similar to 1992.
- Although there was fluctuation, there were no major regional trends evident in the UCR data. The Prairie region had the highest rate per 10,000 male youth population and Quebec had the lowest rate.
- At the national level, there was a steady increase in the number of male youth processed through the youth court system, followed by a slight decrease in 1994/95 and 1995/96 to its lowest level, and an increase in 1996/97 to slightly above the 1991/92 rate.
- Youth court statistics indicate relative stability among the violent offenses over the four-year period. Non-sexual assault increased from 1991/92 to the highest level in 1994/95 and the second highest level in 1996/97.

5. *Has there been an increase in the frequency of male youth remanded into custody pending disposition of a charge?*

Due to data from only Prince Edward Island, Manitoba and British Columbia, conclusions are tentative.

- Prince Edward Island increased from 1992/93 to 1996/97.
- Overall stability in Manitoba from 1992/93 was followed by an increase to the highest rate per 10,000 male youth in 1996/97.
- British Columbia increased slightly over the 5-year span.

6. *Are male youth getting more serious dispositions?*

- There has been a consistent increase in secure custody dispositions. Open custody increased until 1993/94, followed by a slight decrease in 1996/97. Probation decreased until 1993/94 when an increase trend began. Fine and community service order dispositions decreased in 1993/94 to 1994/95, before leveling off. Absolute discharge dispositions decreased from 1991/92 to 1996/97.
- Dispositions remained relatively stable in the Atlantic region. There was a slight decrease in the use of secure custody and a slight increase in the use of probation in the Quebec region. In the Ontario region, there was an increase in the use of secure custody and probation dispositions, and a substantial decrease in fine and community service orders. There was a slight increase in the use of secure and open custody dispositions in the Prairie and Pacific regions.
- The most common disposition across regions was probation, except in the Ontario region in 1993/94 where fine and community service order were the most common dispositions.

7. *Has there been an increase in the number of male youth transferred to adult court?*

- There has been an increase in the number of male youth transferred to adult court from 1991/92 to 1996/97. Following a decrease trend from 1991/92, the number of youth transferred to adult court more than doubled in 1994/95, fluctuating until an increase in 1996/97.
- From 1991/92 to 1996/97, a total of 486 male youths were transferred to adult court. The majority of youth (87%) were 16 years of age or older.
- The Prairie region has the highest number of transfers, while the Atlantic region has the lowest.

NOTE

- The unit of analyses in the Youth Court Survey is cases processed and in the Uniform Crime Report Survey is either incidents or persons charged. In the latter case this includes the number of charges laid or recommended to be laid against those people. An explanation and definition of the data sources are presented in Appendix A and F. Please see original sources for further clarification.
- The Youth Court Survey and Corrections Key Indicator Report data are presented for fiscal years. The Uniform Crime Report (UCR) Survey data are presented for calendar years. Caution must therefore be used in making comparisons between the data sources. The Postcensal and updated Postcensal population estimates (Statistics Canada) are for July 1 of the specific year.
- The population estimates used in this report may not be the most recent revision of the data. The Canadian Centre for Justice Statistics provides revisions the year following the original release. The changes, however, are small and do not effect the findings of this report (See Appendix A, Canadian Census).
- To contextualize the UCR findings in this report, the rates of adult females and males, and youth females and males charged by police *increased* from 1984 to 1991. From 1991 to 1996, the overall charge rates declined.¹

QUESTION 7:

HAS THERE BEEN AN INCREASE IN THE NUMBER OF MALE YOUTH TRANSFERRED TO ADULT COURT?

*** Refer to Appendix A for definitions of data sources**

**** Refer to Appendix B for format of data presentation**

QUESTION 1:

HAS THERE BEEN AN INCREASE IN MALE YOUTH CHARGED BY THE POLICE, 1992 - 1997?

Canada

- At the national level, there has been a consistent decrease in male youth charged by police.
- By offense, property crimes had the most significant and consistent decrease trend. Crimes of violence increased slightly until 1995, decreased in 1996 and 1997 with the 1997 rate equal to the 1992 rate. Drug offenses increased until 1994 when the rate stabilized at approximately 36 per 10,000 male youth. Other offenses decreased gradually from 1992 to 1994, and remained relatively stable in subsequent years.

Regions

- Overall, the 1997 regional rates are notably lower than the 1992 rates.
- In the Atlantic region there was a decrease from 1992 to 1995, followed by a slight increase in 1996 before dropping to the lowest rate in 1997.
- The Quebec region experienced a decrease from 1992 to 1994, followed by a slight increase from 1995 to 1996 and a decrease in 1997 to the lowest rate in the 6-year span.
- The trend in the Ontario region suggests the greatest fluctuation. A significant decrease from 1992 to 1993 was followed by a slight increase from 1993 to 1995. A notable decrease in 1996 was followed by the lowest rate in 1997.
- Both the Prairie and the Pacific regions consistently decreased in the rate of male youth charged by police, 1992 to 1997.
- Over the 6-year span, the Prairie region consistently had the highest rate per 10,000 male youth population, followed by the Pacific region. The lowest rate was in the Quebec region. Ontario and the Atlantic regions had similar rates.

QUESTION 2:

HAS THERE BEEN AN INCREASE IN MALE YOUTH PROCESSED THROUGH THE YOUTH COURT SYSTEM, 1992/93 - 1996/97?

Canada

- Overall, there has been a decrease.
- By specific offense, crimes of violence increased slightly from 1991/92 to 1993/94 followed by a decrease trend until returning to a slightly higher rate in 1996/97. Young Offenders Act offenses increased until 1993/94 and remained relatively stable through to 1996/97. The only consistent decrease trends from 1992/93 to 1996/97 occurred in property crimes (significant) and other crimes (except for an increase in 1995/96). After a slight decrease from 1991/92 to 1992/93, drug offenses consistently increased.

Regions

- Both the Atlantic and Quebec regions increased from 1992/93 to 1996/97. The other regions decreased. The most significant decrease was in the Prairie region, followed by the Pacific and Ontario regions.
- Over the 5-year span, the Prairie region had the highest rate per 10,000 male youth population, followed by the Ontario, Atlantic, Pacific and Quebec regions.

Chart 2.3A: Male Youth Processed Through the Youth Court System Per 10,000 Male Youth Population, Regions

QUESTION 3:

ARE MALE YOUTH GETTING INVOLVED WITH CRIME AT A YOUNGER AGE?

Canada

- Overall, it appears that male youth are not getting involved with crime at a younger age. This is true both for male youth charged by police and the rate of male youth charged by police per 10,000 male youth population. There was a steady trend with the number of youth processed increasing as age increased.
- The mean age of 15.5 was consistent from 1992/93 to 1995/96, increasing slightly in 1996/97 to 16.

Regions

- In almost all regions, the greatest number of male youth processed through youth court by principle charge were 17 years of age. The Pacific region (1996/97) was the exception, where the greatest number of male youth processed were 16 year olds.
- The following is characteristic of each region:

Atlantic Region: There was a slight increase in males aged 12, 13, 14, 15 and over 17 processed from 1992/93 to 1996/97. There was a decreased number of male youth processed in the other age categories.

Quebec Region: From 1992/93 to 1996/97 there was a steady increase in the number of youth processed in every year and in each age category except for the over 17 year old age group which experienced a decrease.

Ontario Region: From 1992/93 to 1996/97 decreases were noted in all age groups except the 12, 13, 15 and over 17 age groups where there were slight increases.

Prairie Region: Decrease in the number and age of males processed through youth court from 1992/93 to 1996/97, except for 12 year olds where a slight increase occurred.

Pacific Region: There was a decrease in number and in age of males processed through youth court from 1992/93 to 1996/97.

* See Appendix C for additional research findings

** By Principle Charge: The principle charge is the most serious charge for a person or case upon entering the youth court process. Where a young person or a case has only one charge, it is defined as the principle charge. Where more than one charge is linked to a person or a case, three criteria are used to select the principle charge: (1) the nature of the offense, (2) the decision of the court, and (3) the disposition of the charge. Violent charges are given first priority in the selection process, followed by drug and narcotic offenses, property offenses, other Criminal Code offenses, offenses under the Young Offenders Act, and other federal statute offenses.

*** Age at the time the most significant charge was committed

**** Other = Other Federal Statutes & Other Crime

***** Drugs = Narcotics Control Act & Food and Drugs Act

***** YOA = Failure to Comply with a Disposition or Undertaking, Contempt Against Youth Court, and Assist/Interfere Other

***** Rate per 10,000 total male youth (aged 12 - 17 years) population

***** - is nil or zero

* Source: Youth Court Survey

** By Principle Charge: The principle charge is the most serious charge for a person or case upon entering the youth court process. Where a young person or a case has only one charge, it is defined as the principle charge. Where more than one charge is linked to a person or a case, three criteria are used to select the principle charge: (1) the nature of the offense, (2) the decision of the court, and (3) the disposition of the charge. Violent charges are given first priority in the selection process, followed by drug and narcotic offenses, property offenses, other Criminal Code offenses, offenses under the Young Offenders Act, and other federal statute offenses.

*** Age at the time the most significant charge was committed

**** 1991 YCS not included because the Youth Court Statistics Report does not differentiate between males and females with this data. However, the data may be made available from the Canadian Centre for Justice Statistics.

***** Noting the similarity between the actual rate & the per 10,000 male youth population rate (refer to prior table), only the actual rate is referred to for the regions

***** - is nil or zero

QUESTION 4:

ARE MALE YOUTH GETTING MORE VIOLENT?

Canada

Uniform Crime Report

- Nationally, the rate peaked in 1995 before returning to a slightly lower rate in 1996 and 1997.
- The homicide rate decreased significantly from 1992 to 1993, and since 1994 the rate has remained fairly stable at approximately 0.40 per 10,000 male youth until a decrease in 1997. The 1997 rate is lower than the 1992 rate. The attempted murder rate fluctuated from 1992 to 1996, before reaching its lowest rate in 1997. There was a steady decrease in sexual assault and other sexual offenses over the 6-year span. There was a steady increase in non-sexual assault rates from 1992 to 1995, followed by a decline in 1996 and 1997 to slightly above the 1992 rate. The rate of abduction fluctuated, however the variations are small. Overall, robbery rates increased from 1992 to 1997.
- Across the 6-year span, non-sexual assault had the highest charge rate among the violent offense categories, followed by robbery, sexual assault and other sexual offenses, attempted murder, homicide, and abduction.

Youth Court Survey

- From 1991/92 to 1993/94, there was steady increase in the number of male youth processed through the youth court system for a violent offense (per 10,000 male youth population), followed by a decrease trend until 1996/97 when the rate increased to slightly above the 1991/92 rate.
- Overall, the homicide rate decreased from 1991/92 to 1996/97. The attempted murder rate peaked in 1992/93 and experienced slight fluctuations in subsequent years. A steady decrease in sexual assault and other sexual offenses followed the highest rate in 1993/94. Non-sexual assault increased from 1991/92 to its peak level in 1994/95. The rate decreased in 1995/96 before returning to the second highest level in 1996/97. A decrease was apparent in weapon offenses, while the robbery rate increased slightly over the 6 year span. The abduction rate increased slightly in 1992/93 and remained relatively stable.

Regions

Uniform Crime Report

- Although there was regional fluctuation, no major trends were evident.
- An increase in the Atlantic region from 1992 to 1994 was followed by a decrease from 1995 to 1997.
- An increase in the Quebec region from 1993 was followed by a slight decrease in 1996 and an increase in 1997.
- The rate in Ontario decreased from 1992 to 1994. A slight increase in 1995 was followed by a marked decrease in 1996. A slight increase in 1997 followed the decrease, but the rate remained considerably lower than the 1992 level.
- The rate of male youth charged by police for a violent offense in the Prairie region was inconsistent, with the highest rate of male youth charges occurring in 1996.
- In the Pacific region there was an increase until 1994 followed by a decrease trend.
- The Prairie region had the highest rate per 10,000 male youth population and Quebec region had the lowest rate.

* See Appendix D for additional research findings.

QUESTION 5:

HAS THERE BEEN AN INCREASE IN THE FREQUENCY OF MALE YOUTH REMANDED INTO CUSTODY PENDING DISPOSITION OF A CHARGE?

- **Due to data from only Prince Edward Island, Manitoba and British Columbia, conclusions are tentative:**

Prince Edward Island: There was an increase from 1992/93 to 1996/97.

Manitoba: Overall stability from 1992/93 was followed by an increase to the highest rate per 10,000 male youth in 1996/97.

British Columbia: The rate increased slightly over the 5-year span.

Table 5.1: Male Youth Remanded into Custody* Per Month, Select Provinces*****

QUESTION 6:

ARE MALE YOUTH GETTING MORE SERIOUS DISPOSITIONS?

Canada

- For the most serious disposition, secure custody, there was a consistent increase from 1991/92 to 1994/95. Following a slight decrease in 1995/96, the percentage returned to a level similar to the 1994/95 level in 1996/97. The second most serious disposition, open custody, also revealed an increase until 1993/94. The percentage remained stable until a slight decrease in 1996/97. Probation revealed a consistent decrease until 1993/94 when a marked increase trend began. Fine and community service order dispositions decreased dramatically from 1993/94 to 1994/95 before leveling off and decreasing slightly in 1996/97. Absolute discharge dispositions decreased from 1991/92 to 1996/97.

Regions

- The most common disposition in each year across all regions was probation, except in 1993/94 where fine and community service order were the most common dispositions in the Ontario region.
- Examining the percentage of male youth dispositions per total male youth disposition, the following appeared for each region:

Atlantic Region: Slight fluctuation in secure custody and probation dispositions. Slight and consistent increase in open custody from 1991/92 to 1996/97. Slight decrease in fine and community service order dispositions from 1991/92 to 1995/96 returning to a higher percentage in 1996/97. Overall, absolute discharge remained stable in the 6-year span.

Quebec Region: Slight decrease in secure custody. A notable increase from 1991/92 to 1994/95 in open custody dispositions and returned to a lower rate in 1995/96 to 1996/97. Slight and steady increase in probation. A decrease in fine and community service order ending in 1993/94 was followed by an increase. Fairly stable rate of absolute discharge.

Ontario Region: The secure custody rate remained stable until an increase in 1994/95, and remained stable for the following two years. Relatively stable open custody rate. The probation rate showed a marked increase in 1994/95 and increased slightly in subsequent years. A marked decrease in 1994/95 in fine and community service order dispositions. Stable rate of absolute discharge.

Prairie Region: Slight increase in secure and open custody dispositions. Slight and consistent decrease in probation until 1994/95 when an increase trend

began. Slight decrease in fine and community service and absolute discharge dispositions.

Pacific Region: Steady increase in secure and open custody dispositions. Slight and consistent decrease in probation until 1994/95, when a slight increase trend began. Overall decrease in fine and community service order and absolute discharge dispositions.

Table 6.1: Male Youth Disposition*, Canada

DISPOSITION**	1991/1992	1992/1993	1993/1994	1994/1995	1995/1996	1996/1997

** Disposition is the most serious disposition for a person or a case. The dispositions above are ordered from most to least serious. If the disposition with the highest priority is a fine, compensation on pay purchases, and there is a combination of these, the disposition with the largest dollar value is selected as the most significant. In the event that multiple charges result in multiple custody orders, the highest priority is assigned to the largest custody order. The same situation applies in the case of multiple probation orders.

*** - is nil or zero

QUESTION 7:

HAS THERE BEEN AN INCREASE IN THE NUMBER OF MALE YOUTH TRANSFERRED TO ADULT COURT?

- Overall, there has been an increase in the number of male youth transferred to adult court in Canada from 1991/92 to 1996/97.
- Following a decrease in 1992/93, the number of male youths transferred to adult court more than doubled in 1994/95. A significant decrease of almost 50% in 1995/96 was followed by an increase in 1996/97.
- Since 1991/92, the Prairie region has undergone the largest increase - peaking in 1994/95. A significant decrease in 1995/96 was followed by a slight increase in 1996/97.
- The Atlantic region had the least absolute number (12) of male youths transferred to adult court over the 6-year span, while the Prairie region had the most (247).
- The average age remained stable from 1991/92 to 1996/97 (approximately 16.3).
- The majority (87%) of youth transferred to adult court from 1991/92 to 1996/97 have been 16 years of age or older.

APPENDIX A

EXPLANATION AND DEFINITION OF DATA SOURCES²

1. UNIFORM CRIME REPORT SURVEY (UCR)

- A continuous historical record of crime and traffic statistics that have been investigated and reported by every Canadian police agency since 1962.
- As of 1995, there were approximately 1,800 separate police locations responding to the Survey, comprising approximately 420 different police forces. The most significant loss of information occurs in the rare situation where a police force fails to submit data to the Centre. In this situation, estimates are calculated for that particular force.
- Collected information includes the number of criminal incidents, the clearance status of those incidents and information on persons charged.
- Data is available for nearly 100 separate criminal offenses.
- Incidents are classified according to the most serious offense occurring in the incident (generally the offense which carries the longest maximum sentence under the Criminal Code of Canada). Violent offenses take precedence over non-violent offenses (i.e., an incident involving a breaking and entering offense and an assault is counted as an assault incident).

2. REVISED, OR INCIDENT BASED, UNIFORM CRIME REPORT SURVEY

- In 1984 the UCR Survey was re-developed and expanded in terms of the information collected. The Revised UCR Survey allows detailed examinations of accused and victim characteristics (e.g., age, sex, alcohol/drug consumption, relationship, level of injury and weapon causing injury), as well as characteristics of the incident itself (e.g., location, targets of violations, secondary violations, the presence of weapons, property type, date and time).
- In 1996, the Revised UCR Survey had 154 police forces reporting to it, representing approximately 47% of the national volume of reported crime: 39% of incidents were from Quebec, 38% from Ontario, 10% from Alberta, 8% from British Columbia, 4% from Saskatchewan and 1% from New Brunswick. With the exception of Quebec, the majority of police departments are urban.

² The majority of the information presented in the appendices is taken from Colleen Anne Dell and Roger Boe, 1997, Research Brief B-18.

3. YOUTH COURT SURVEY

- National database of statistical information on charges, cases and persons involving accused who are 12 to 17 years of age (up to the 18th birthday). It represents a census of federal statute charges (Criminal Code, Narcotic Control Act, Food and Drugs Act, Young Offender Act, and other federal statutes) heard in youth courts, *excluding* appeals, reviews, provincial statutes, and municipal by-law infractions.
- Basic charge data are used to 'create' cases, a case being all the charges against one young person that have the same date of first appearance.
- Data is collected from all youth courts in Canada and is intended to achieve complete coverage of charges dealt with by youth courts.

4. CORRECTIONS KEY INDICATOR REPORT FOR ADULTS AND YOUNG OFFENDERS

- Data is quite general in nature and is primarily used to monitor correctional population trends.
- Allows for historical comparisons and provides some indication of current trends and demands.

5. CANADIAN CENSUS

- Source: Statistics Canada, Census and Household Statistics Branch, Demography Division (Final Postcensal Estimates for 1991; Updated Postcensal Estimates for 1992, 1993, 1995; and Preliminary Postcensal for 1994, 1996, 1997). Note that the population estimates used in this report are not the most recent. However, the changes are very slight and do not affect the results.

APPENDIX B

DATA PRESENTATION

- This report presents data on the national and regional levels *separately* and provides comparisons *between* regions. This is done because there is often disparity between regions, and Canadian totals are greatly influenced by what happens in large population provinces, such as Ontario.
- The wording in this report, specifically the definitions, are often extracted verbatim from the original sources (i.e., Uniform Crime Report and Youth Court Survey). Please refer to the original source if further clarification is needed on any definition.

APPENDIX C

**REPORT: Serious Violent Offenses and Offenders in Youth Court
Naomi Lee and Tim Leonard, December 1995.**

- In their research on serious violent youth offenders, Lee and Leonard concluded that “[o]ffenses involving accused under fifteen years of age accounted for only 17% of the charges of serious violence (15% for males and 2% for females). One-fifth of the charges related to offenses that occurred when the accused was fifteen, 26% of offenses at age sixteen and 35% of offenses at age seventeen. Sixteen- and seventeen-year-old accused, therefore, accounted for the bulk (62%) of the charges” (1995:9).

APPENDIX D

**REPORTS: Serious Violent Offenses and Offenders in Youth Court.
Naomi Lee and Tim Leonard, December 1995.**

**A Profile of the Juvenile Justice System in Canada.
Sharon Moyer, November 1996.**

- There is widespread consensus among the Canadian populace and research that large portions of young offenders are perpetrators of the most serious forms of violence. This is evident in the extensive media coverage afforded to the topic. However, according to Lee and Leonard (1995:1), these accounts “belie the fact...that the phenomenon of serious youth violence is actually so infrequent that it tends to elude statistical analysis.” Similarly, the research of Moyer (1996:2) concludes that “[e]ven a cursory look at the type of offenses which result in system involvement shows that the vast majority of juvenile criminal behavior involved is not, by any definition, very serious in nature.”
- Lee and Leonard (1995:4) state that “[t]o put this base into perspective it is worth noting that during the reference period, in the nine jurisdictions included in the study, approximately three million individuals were at risk of being charged under the YOA, that is, they were between the ages of 12 and 17 years at some time during the reference period. The estimated number of young persons identified for this study, therefore, represents a mere 0.06% of the population at risk, and their charges relating to serious offenses are approximately 0.3% of the 900,000 charges of all types dealt with by youth courts of the nine jurisdictions in the same period.”

APPENDIX E

**REPORT: Serious Violent Offenses and Offenders in Youth Court.
Naomi Lee and Tim Leonard, December 1995.**

- Only a small fraction of young persons (males and females) charged with serious violent offenses were transferred to adult court.
- Transfer orders were issued by youth courts in more cases that did not involve violent offenses than in cases that did.
- Youth who were transferred tend to be of the upper limit of the age jurisdiction of the YOA.
- Youth who were transferred tend to have rather high charge to person ratios in their youth court histories. They share these characteristics, however, with many who remain in the youth justice system and receive dispositions under the Act. The data signal a need for more detailed research into the workings and effects of the transfer provisions of the YOA (50).

APPENDIX F

Youth Court Survey

- A **case** is one or more charges against a young person which are presented in court on the same date. Basic charge data are used to 'create' cases, a case being all the charges against a young person that have the same date of first appearance. Identifiers used to link charges to cases are the coded name, sex, date of birth, date of first court appearance and court location code. This report uses case counts as the unit of analysis.

Uniform Crime Report

- An **incident** is the basis for counting reported crime. An incident is the set of connected events usually constituting an occurrence report. In the aggregate survey, the incident is used in conjunction with the Most Serious Offense rule to form the aggregate offense counts (see below for definition of the Most Serious Offense rule). In the incident based survey, information for each incident is reported individually. Aggregate most serious offense rules are then applied to these data in order to reconcile them with historical aggregate counts as well as with data from aggregate respondents.
- **Most Serious Offense Rule** - The UCR classifies incidents according to the most serious offense in the incident. In categorizing incidents, violent offenses always take precedence over non-violent offenses. The UCR Survey scores violent incidents differently from other types of crimes. For violent crimes, a separate incident is recorded for each victim (categorized according to the most serious offense against the victim). If, for example, one person assaults three people, then three incidents are recorded. If three people assault one person, only one incident is recorded. For non-violent crimes, one incident (categorized according to the most serious offense in the incident) is counted for every distinct or separate occurrence.
- Robbery is one exception to the above ruling. Robbery is categorized as a violent offense. Unlike all other violent offenses, one occurrence of robbery is equal to one incident, regardless of the number of victims. The reason for this exception is that robbery can involve many people who could all be considered victims. In a bank robbery with 5 tellers and 20 customers present, 25 incidents of robbery would be counted if the normal scoring rule for violent incidents were applied. This would seriously overstate the occurrence of robbery.

- Thus, the total number of incidents recorded by the UCR survey is not a census of all violations of the law that come to the attention of the police. Rather, it is equal to the number of victims of violent crimes (other than robberies) plus the number of separate occurrences of non-violent crimes (and robberies).
- **Persons charged** - The UCR also records the number of persons charged. For incidents that are cleared, the survey collects the number of adults charged by gender, as well as the number of youths (aged 12 to 17 years) charged by gender. The “persons charged” category includes the number of people charged or recommended for charges by police, not the number of charges laid or recommended or laid against those people. A person who is simultaneously charged with more than one offense is counted according to the most serious offense, even if the offenses occurred in more than one incident. In addition, persons may be counted more than once throughout the year; that is, individuals are counted on each occasion that they are charged by the police.
- Persons charged refers to persons who were charged in connection with a particular incident. These persons, however, may have been charged later with a lesser offense. For example, a person who commits a breaking and entering offense may end up being charged with possession of stolen goods if, for instance, the police have better evidence on the latter offense. Both the actual incident and the person charged are counted under breaking and entering, even though the person was actually charged with possession of stolen goods.

Corrections Key Indicator Report

- The data used in this report are the average month-end admission count to a facility. Averages are calculated by adding all month-end admission counts and dividing the total number of months for the corresponding period. Actual in counts includes all youths on remand and temporary detention, sentenced offenders and other young offenders who are legally required to be at a facility and are present at the time the count is taken.
