

5.13 Export to the U.S. - Musk Oxen

Export of Ruminants to the
U.S. and Mexico Suspended
May 20, 2003

Health Certification

1. The export certificate HA 1705 must be used.

Certification Procedures

2. **Tuberculosis:** The tuberculin test required by this certificate is to be read at the 72 hour interval.
3. **Brucellosis:** While the BPAT test for *B. abortus* may be performed at an accredited laboratory, the complement fixation test for *B. ovis* must be completed at Animal Diseases Research Institute (ADRI) in Nepean. Contact your CFIA district veterinarian to obtain the required export notification number to submit specimens to the ADRI laboratory.

Procedure for Completing Canadian Health Certificate (HA 1795)

4. The accredited veterinarian must use the most recent version of export certificate HA 1795.
5. All sections of the export certificate must be completed in full, including all the columns describing animal identification. An incomplete certificate will be returned to the accredited veterinarian to be completed.
6. The accredited veterinarian must complete the export health certificate by entering all required information according to the directions provided above. The completed and signed health certificate shall be submitted to the CFIA veterinary inspector to review and, if all the requirements are met, endorse. A fee will be charged for CFIA's endorsement. **The health certificate is valid for a period of thirty (30) days from the date of the examination.**
