Housing Demand Drifts Lower

With most of the pent-up demand created in the 1990's now satisfied and the pace of income growth slowing, housing demand within the St. John's region is forecast to drift gradually lower in coming years. The outlook for a steady rise in interest rates commencing in late 2005, combined with only modest employment growth, will also moderate homebuying activity this year and next. While conditions will weaken, activity will remain buoyant in historical terms.

Resale Market Begins to Cool

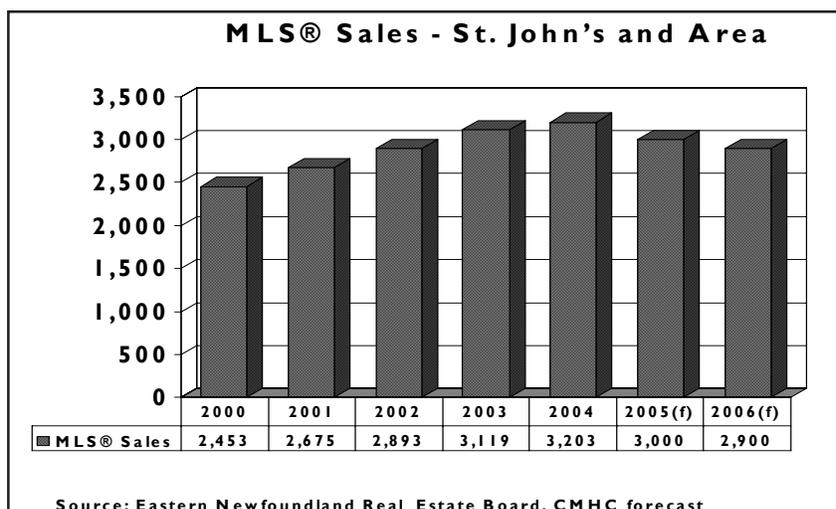

After posting record numbers in each of the previous six years, the local resale market is expected to gradually cool. Our forecast calls for MLS® residential sales through the Eastern Newfoundland Real Estate Board to decline just over six per cent to 3,000 units in 2005 and edge down further to 2,900 units the following year. With new home sales forming a significant portion of MLS® activity, an expected decline in housing starts will also lead to fewer MLS® residential sales over the forecast period.

VOLUME I, EDITION I
SPRING 2005

IN THIS ISSUE

- 1 Resale Market Begins to Cool
- 2 Balanced market conditions ahead
- 2 Price gains continue, but at reduced pace
- 2 **New Homes Market:** Fewer housing starts expected
- 3 **Rental Market:** Vacancy rate edges higher
- 3 Mortgage rates to rise, but remain low
- 4 **Forecast Summary Table**

MLS®— Multiple Listing Service is a registered certification mark owned by the Canadian Real Estate Association.

Canada

Local housing demand will also be negatively affected by reduced affordability. The combination of rising prices, higher interest rates and weaker income growth will likely limit the ability of some households to purchase homes and force them to either delay or abandon the desire to own a home. These conditions will moderate first-time buyer activity with the bulk of demand remaining concentrated in the move-up market.

Balanced Market Conditions Ahead

Despite strong sales activity during the early part of 2005, the market continued to move closer to balanced conditions, largely as a result of a steady rise in active listings. The supply of active residential listings surged 27.1 per cent during the first quarter, maintaining a trend that began in the second half of 2003. With more choice in the marketplace, homebuyers are able to shop around. As a result, listing times are getting longer and growth in house prices is also showing signs of easing. As homebuying demand begins to slow and listings continue to increase, the local resale market should move to a balanced position by this summer.

Price Gains Continue at Reduced Pace				
Bungalow				
	Jan 2003	Jan 2004	Jan 2005	Jan 2006(f)
St. John's East	\$153,000	\$159,000	\$166,500	\$170,000
St. John's West	\$146,000	\$151,000	\$158,000	\$161,000
Mount Pearl	\$143,000	\$148,000	\$153,000	\$156,000
Two Storey				
	Jan 2003	Jan 2004	Jan 2005	Jan 2006(f)
St. John's East	\$200,000	\$210,000	\$230,000	\$239,000
St. John's West	\$195,000	\$206,000	\$234,000	\$243,000
Mount Pearl	\$196,000	\$205,000	\$230,000	\$239,000

This will follow approximately three years in which sellers' market conditions have prevailed.

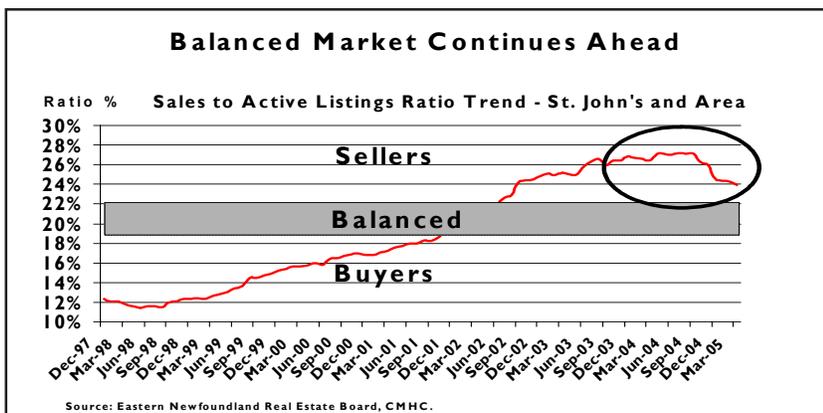

Price Gains Continue, But at Reduced Pace

As the market adjusts to balanced conditions, choice will increase and selling times will lengthen. Accordingly, expect to see slower rates of price growth over the next two years. With move-up buyers remaining active, two-storey homes will continue to experience the strongest growth—between three and five per cent annually. Prices for bungalow-style homes are forecast to increase between two to three per cent in both 2005 and 2006. These rates of growth will be approximately half the level achieved during 2004.

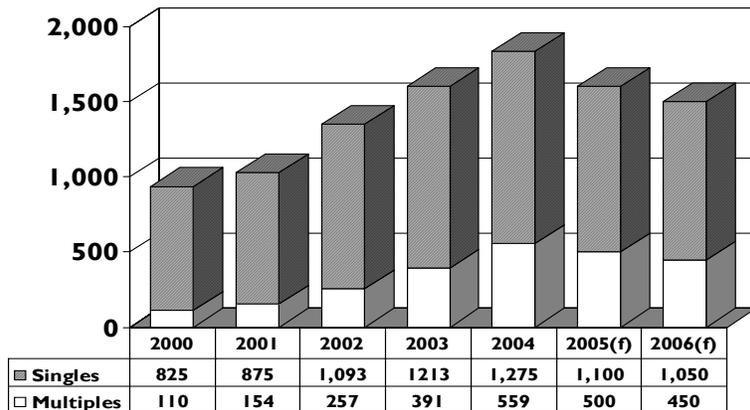

New Homes Market

Fewer Housing Starts Expected

Following six years of growth, highlighted by a 30-year high in 2004, housing starts are forecast to decline in each of the next two years. A general slowdown in demand, coupled with a sharp rise in construction costs and competition from a growing supply of more affordably priced, existing homes, will be largely responsible for the decline. Overall, housing starts will fall to 1,600 units this year and slip lower to an estimated 1,500 units in 2006. Despite the outlook, residential construction activity will also remain relatively strong in historical terms. While fewer starts of both single-detached and multiple units will occur, the singles market will be hardest hit. That is largely because singles will also be hampered by the ongoing shift towards more affordably priced, medium-density options, including semi-detached and duplex units. Single starts are forecast at 1,100 units in 2005 before falling further to 1,050 units in 2006.

Multiple Starts Also Lower, But Well Ahead of 5-year Average

With the multiples market heavily concentrated in ownership housing for over a decade, the outlook for a general reduction in homebuying demand will also contribute to slightly fewer multiple starts. Expect semi-detached starts to cool slightly from last year's four-fold increase. Steadily rising costs, in tandem with higher interest rates, will keep basement apartment starts around current levels as a portion of buyers remain in need of the additional income in order to afford the home. Condo starts are expected to remain flat this year, but rise modestly in 2006 as demand picks up and current supplies are absorbed. On balance, multiple unit starts will reach 500 units in 2005 before edging down to 450 units in 2006. This level of activity will remain well ahead of the average level achieved over the past five years.

Rental Market

Vacancy Rate Edges Higher

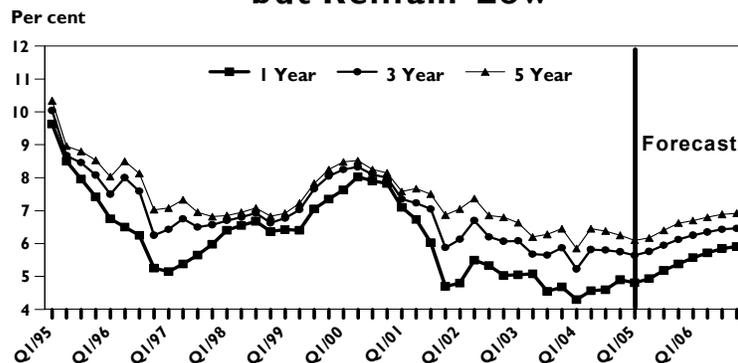

The outlook for only modest employment growth, coupled with another year of brisk home sales, will push the vacancy rate higher over the next 12 to 24 months. Competition from an ongoing supply of basement apartments will also affect the performance of larger rental projects.

Accordingly, the vacancy rate for private structures containing three or more units is forecast to edge higher, to between 3.5 and 4 per cent this year and next. Despite the outlook for more vacancies, monthly rents are expected to increase in the three to five per cent range in each of the next two years as landlords attempt to recover the large investment associated with significant renovation to the rental stock in recent years.

Mortgage Rates to Rise, but Remain Low

Posted mortgage rates are forecast to rise in 2005–06 but they will remain low in historical terms. Increases will be modest, rising by less than 50 basis points annually this year and next. One-, three- and five-year mortgage rates are forecast to be in the 4.50–5.50, 5.50–6.50, and 5.75–6.75 per cent ranges, respectively, in 2005. However, rising posted rates will not necessarily lead to higher mortgage rates for borrowers as the practice of negotiating discounts ranging between 0.50 to 1.50 per cent from posted rates is likely to persist.

Mortgage Rates to Rise but Remain Low
