

RENTAL MARKET

REPORT

VICTORIA CMA

OCTOBER 2005

Apartment Vacancy Rate Remains Low in 2005

- Metro Victoria vacancy rates matched 2001's low of 0.5% this year, edging down from 0.6% in 2004.
- More job opportunities mean stronger demand for rental suites as people move to Metro Victoria for employment.
- Average rents rose 4.5% from 2004 levels - the highest increase recorded since 1991.
- In addition to putting upward pressure on rents, continued low apartment vacancy rates are supporting the trend to alternative rental housing provided by investors (condo rentals), homeowners (secondary suites) and other renters (shared accommodation).

National Apartment Vacancy Rate Stabilizes

The average rental apartment vacancy rate in Canada's 28 major centres¹ was unchanged at 2.7 per cent in October 2005 compared to last year. This follows three consecutive increases in the vacancy rate over the 2002 to 2004 period. The vacancy rate remains below the average of 2.8 per cent observed over the 1995 to 2004 period.

Thanks to a solid economy and strong job creation, household formation has been healthy, which has promoted demand for both ownership and rental housing. The stabilizing of the vacancy rate across the major centres reflects a number of factors. As the majority

of new immigrants initially settle in rental housing, high levels of immigration have been a key driver of rental demand over the past year. Also, across most centres, more renters are remaining in rental units as the gap between the cost of home ownership and renting increased in 2005. These two factors have put downward pressure on vacancy rates over the past year.

On the other hand, home ownership demand remained very strong, which can be seen from the record level of existing home sales in 2005. Strong home ownership demand continues to apply upward pressure on vacancy rates. Adding to this is the high level of condominium completions in some centres. Condominiums are a relatively inexpensive form of housing that are often purchased by renter households switching to home ownership. In some cases, condos supplement the rental market as they may be purchased by investors who, in turn, rent them out. Therefore, high levels of condominium completions have created competition for the rental market and have put upward pressure on vacancy rates.

Even though the average rental apartment vacancy rate has moved higher in recent years, many households are still facing affordability issues across Canada. Either these households need to move to less expensive units or require additional help to make their monthly shelter costs more affordable. In some cases, however, there are not enough vacant units to meet the needs of all households in core housing need. Therefore, additional affordable housing units continue to be required.

The centres with the highest vacancy rates in 2005 were Windsor (10.3 per cent), Saint John (NB) (5.7 per cent), Saskatoon (4.6 per cent), Thunder Bay (4.6 per cent), Edmonton (4.5 per cent), St. John's (NFLD) (4.5 per cent),

and Saguenay (4.5 per cent). On the other hand, the major urban centres with the lowest vacancy rates were Victoria (0.5 per cent), Sherbrooke (1.2 per cent), Québec (1.4 per cent), Vancouver (1.4 per cent), Trois-Rivières (1.5 per cent), Calgary (1.6 per cent), and Greater Sudbury (1.6 per cent).

Average rents for two-bedroom apartments increased in 25 of the 28 major centres. However in 15 of the 25 major centres where rents were up, the increases were small. The greatest increases occurred in Kitchener, Victoria, and Quebec where rents were up 6.0 per cent, 4.8 per cent, and 4.2 per cent, respectively. Overall, the average rent for two-bedroom apartments across Canada's 28 major centres increased by 1.6 per cent in October 2005 compared to last year.

The highest average monthly rents for two-bedroom apartments were in Toronto (\$1,052), Vancouver (\$1,004), and Ottawa (\$920), while the lowest were in Trois-Rivières (\$474) and Saguenay (\$472).

Victoria's apartment vacancy rates were lowest of all major Canadian centres again in 2005.

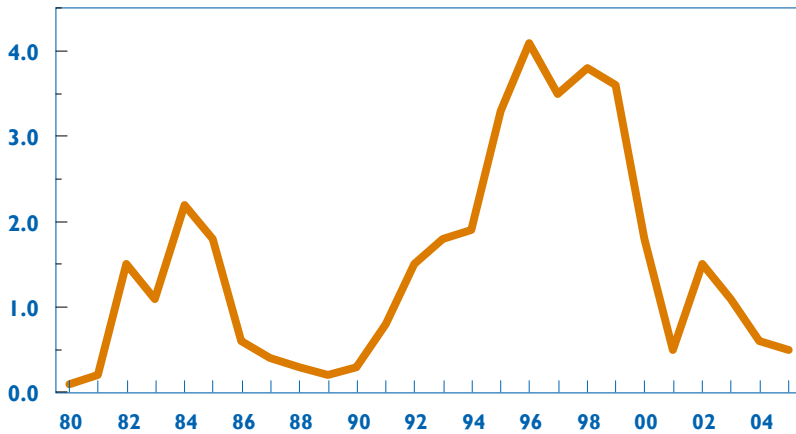

¹ Major centres are based on Statistics Canada Census Metropolitan Areas (CMAs) with the exception of the Ottawa-Gatineau CMA which is treated as two centres for Rental Market Survey purposes.

APARTMENT VACANCY RATE

METROPOLITAN VICTORIA

1980 to 2005

PERCENT

Source: CMHC Victoria

Apartment Rental Market Demand Remains Strong

Growing demand for rental housing, together with a lack of new rental construction, is keeping vacancy rates low in Victoria. Demand is rising due to **strong employment**

growth, increased in-migration and higher university student enrollment.

Suites with three or more bedrooms recorded the lowest vacancy rate at 0.2%, indicating rental **suites for larger households such as families were in shortest supply.**

In fact, no vacancies were reported for this type of accommodation outside the City of Victoria. As well, no two bedroom suite vacancies were reported in Sidney or Oak Bay.

Smaller suites reported lowest vacancies in Victoria City and Saanich. In contrast, higher vacancy rates for small suites could be found in Esquimalt and the West Shore markets of Langford, View Royal, Colwood and Sooke.

Overall vacancy rates held below **2% in all areas of Metro Victoria**, and below 1% everywhere but Esquimalt and the West Shore. The James Bay area of Victoria City recorded the lowest rate, at 0.2%, followed by four zones reporting 0.3% vacancies: Fort. St. area, Cook St. area, Saanich/Central Saanich and Oak Bay.

Fewer Apartments in 2005 Rental Market

Metro Victoria saw **no new privately-initiated rental market suites completed** in 2005, and conversion of existing suites to other uses resulted in 100 fewer rental apartments overall. CMHC's 2005 survey encompassed 23,609 apartments, of which 116 were vacant, as well as 688 townhouses where just 5 vacancies were reported.

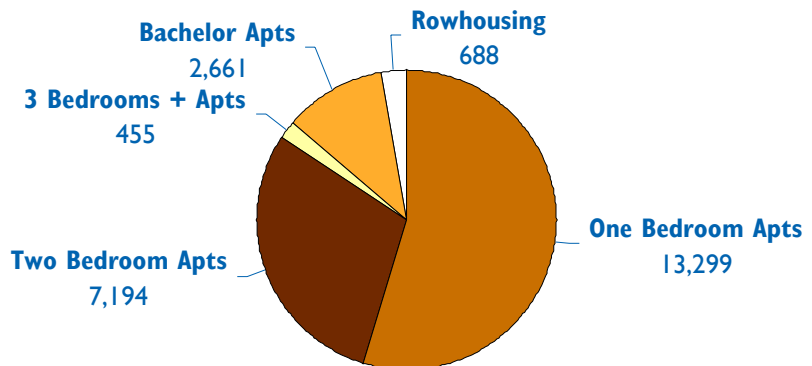

With real estate prices rising much faster than rent increases, **landlords are under growing pressure to convert rental apartments to homeowner condos** where feasible. Similar considerations mean

that developers considering new multi-family construction are drawn to condos rather than rental apartments.

Apartment Availability Rates Lower than in 2004

Victoria's strong rental market demand is reflected in dipping availability rates - 1.5% this year, down from 1.9% in 2004. **Fewer suites were available for rent** (meaning the existing tenant has given or received notice to more and a new tenant has not signed a lease, or the suite is vacant) **compared with last year in all markets except the West Shore.**

Bachelor suites recorded the highest availability, at 2.4%. Suites with the least availability were those with three or more bedrooms, although the availability rate did rise to 1.1% compared with 0.8% in 2004.

Low vacancy rates and low availability rates are putting upward pressure on rents (see below) and also play into **increasing development of alternative forms of rental accomodation** such as condo rentals, secondary suite rental and shared rental of houses. Metro Victoria's rising house prices (up 17% in 2003, 18% in 2004 and 20% in 2005) are another factor in the higher number of secondary suites now being rented: some homeowners manage high carrying costs of mortgages by renting rooms or suites in their homes. Investors, drawn to Victoria's real estate market because of rising prices, are also looking to rent out homes (condos or houses).

Apartment Rents Rise Moderately from 2004 levels

Average rents rose by 4.5% from last year, **pushed higher by continued low vacancies** and rising operating expenses in Metro Victoria. This year's

increase, coming on the heels of a 1.4% uptrend in 2004, was the strongest recorded since 1991.

Apartments with three or more bedrooms saw the largest rent increase, rising 6.4% from 2004 levels, to average \$976 this year.

Geographically, stronger increases were largely recorded in areas with lower vacancy rates. Sidney saw the largest jump, with rents up 11.5% from last year, followed by Oak Bay with a 7.2% increase.

Townhouse Vacancies Dip Below 1%

Five of 688 townhouse suites were vacant during October 2005's survey of Metro Victoria rental markets, with an overall vacancy rate of 0.7%.

No vacant units could be found within Victoria City. As well, **no two bedroom suites were vacant anywhere in Metro Victoria.** The low vacancy rate for townhouses together with low vacancy rates for larger apartments, reflects the scarcity of privately-initiated rental suites geared towards families in the Capital Region.

Townhouse Availability Rates Higher in Oak Bay and West Shore

Overall, 2.2% of townhouses surveyed in October 2005 were available for rent. **Renters were most likely to find a townhouse available in Oak Bay or West**

Shore markets, while Victoria City markets reported the lowest availability rate.

As with the vacancy rate, the lowest availability was noted for two bedroom townhouses, indicating this market segment will continue to experience constraints in the coming months.

Townhouse Rents Edge Up

Average rents rose 2.0% from last year, following a 4.6% increase recorded in 2004. **Rents rose in all categories and all geographic areas except two bedroom townhouses in Esquimalt.**

Average Townhouse Rents

Metropolitan Victoria

October 2002 to October 2005

Source: CMHC Victoria

Rental Market to Ease in 2006

CMHC expects vacancy rates to edge up slightly in 2006 as more new multi-family condominium suites are completed and some of these trickle into the rental market. Strong rental demand is forecast to continue through 2006 as employment growth will remain robust and migration to the Capital Region increases.

Average rents are forecast to bump up 3-5% in Metro Victoria next year as continued low vacancy rates and strong demand put upward pressure on rents.

Despite rising rents, rental investment will be overshadowed by investment in ownership units due to much higher price increases experienced in the homeowner market. Minimal new rental construction is anticipated during 2006.

Capital Region Net Migration

Zone 10	Sidney
Zones 5-10	Remainder of Metro Victoria
Zones 1-10	Victoria CMA

Zone Realignment and Census Tract Revision

For a number of centres, the zones were realigned to better match existing neighbourhoods (see zone descriptions) and, in some cases, the zones were renumbered. At the same time, the census tracts, which make up the zones, were revised to make them correspond to the 2001 census boundaries (as determined by Statistics Canada). The result of these two actions is the following: the universe size, the vacancy rate and the average rent reported for year 2004 in the 2004 rental market publications may be different from the year 2004 numbers reported in the 2005 reports.

METHODOLOGY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only structures with at least three rental units, which have been on the market for at least three months. The data collected for a structure depends on its initiation type (public or private), and whether it is an apartment or a row structure. The survey collects vacant unit data for all sampled structures. The market rent data are collected for only privately initiated structures. The available unit data are obtained only for privately initiated apartment or row structures. Most data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

Definitions

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent. The changes in average rent do not necessarily correspond to rent changes within a given structure. The increase or decrease of the average rents between two years may or may not be statistically significant due to other factors such as the variability of the rents.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 Census area definitions.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.
