OCTOBER 2004 SURVEY

PROVINCIAL VACANCY RATE FALLS

According to the results of the annual rental market survey conducted in October 2004 by Canada Mortgage and Housing Corporation (CMHC), the average vacancy rate in privately initiated rental apartments with three or more units now stands at 2.4 per cent, down from 3.1 per cent in 2003. Of the 26 urban centres surveyed, 16 reported a decline in vacancy rates.

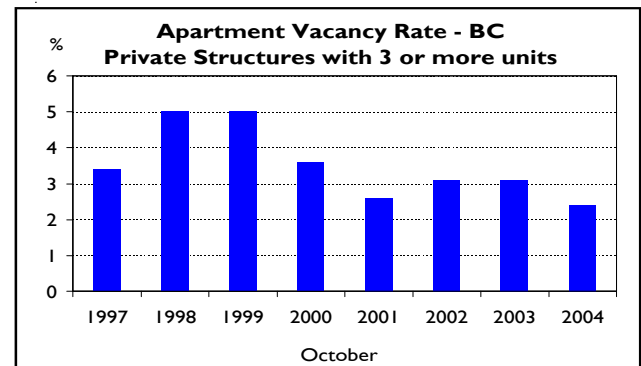

The survey results show that vacancy rates fell in two of the province's three census metropolitan areas. The vacancy rate in Vancouver dropped 0.7 percentage points to 1.3 per cent, while the vacancy rate in Victoria declined to 0.6 per cent, the lowest rate in the province. Strong rental demand, a result of employment growth and migration, combined with limited additions to the purpose built rental stock reduced the number of vacancies this year in both cities.

Apartment vacancy rates were once again lower than those for townhouse units, but both rental types experienced a decline. The townhouse vacancy rate fell from 6.5 per cent to 5.5 per cent, again reflecting strong demand.

According to the survey results, average rents rose for all sizes of apartments and townhouses. Lower vacancy rates, as a result of increased demand, have put upward pressure on rental rates for the province. In both Vancouver and Victoria average rents increased below the rate of inflation. Recent rent movements in these two cities have been closely aligned with inflationary trends.

METHODOLOGY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only structures with at least three rental units, which have been on the market for at least three months. The data collected for a structure depends on its initiation type (public or private), and whether it is an apartment or a row structure. The survey collects vacant unit data for all sampled structures. The market rent data are collected for only privately initiated structures. The available unit data are obtained only for privately initiated apartments. Most data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

Definitions

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the rent being asked for by the owner for the unit.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row Structure: Any building containing three or more rental units, all of which are ground oriented. Owner-occupied units are not included in the rental building unit count.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.
