1. Introduction

The National Pollutant Release Inventory (NPRI) is at the centre of the Government of Canada's efforts to track toxic substances. It is a legislated inventory of pollutants released to the environment. The NPRI was established in 1992 to inform Canadians about releases of pollutants in their communities, including the amounts discharged to the air, water and land and by underground injection and the amounts sent to other facilities for disposal, treatment or recycling and energy recovery. The NPRI is constantly evolving. Since it was established, substances have been added and deleted, the thresholds at which substances are reported have been adjusted, and the scope of the inventory has been expanded to collect data on recycling and pollution prevention. Further refinements are planned for future years. Please refer to **Appendix A** for information on:

- what is new for the 2002 NPRI,
- the NPRI substance list for 2002,
- the 2002 National Overview Series, and
- new groupings for releases and transfers.

See **Appendix B** for definitions of releases, disposals and transfers.

In 2002, criteria air contaminants (CAC) were added to the NPRI for the first time. As a result, the number of NPRI substance reports in the 2002 NPRI has almost doubled compared to 2001. For the purpose of comparing the 2002 data with those submitted in 2001, the information collected on CAC for 2002 are summarized separately. All non-CAC substance data collected for the 2002 reporting year will be referred to as "NPRI pollutants". The reasons for separating CAC substance data from non-CAC data are as follows:

- The information reported for CAC is limited to releases to air. However, the reports of other pollutants cover releases to all environmental media—air, water and land. They also cover disposal and recycling.
- Reporting separately allows for better comparison to historic NPRI data.
- The information for CAC from point sources for 2002 can be presented along with historic information on area sources to give a more complete picture of overall releases.

There are relatively few CAC, and they have always been discussed individually because each one poses different risks to human health and the environment. NPRI pollutants are sometimes grouped together to reveal trends, but it is not correct to add the CAC to the other NPRI pollutants because many NPRI pollutants are also VOCs and this would lead to double counting. (See *2002 National Overview – Reporting Requirements*, **section 2.9**, for more information on double counting.)

The complete list of CAC and non-CAC data for the 2002 reporting year can be found on the NPRI Web site at www.ec.gc.ca/npri.

2. Summary of NPRI Pollutant Data for 2002

For the 2002 reporting year, 3 191 facilities submitted a total of 14 638 substance reports for 208 pollutants (see **table 2-1**). Compared with 2001, this was an increase of 531 (19.9%) in the number of reporting facilities, an increase of 2 631 (21.9%) in the number of reports and an increase of seven (3.5%) in the number of pollutants reported. These increases are due largely to greater efforts by the NPRI regional offices to encourage facilities to comply with the reporting requirements.

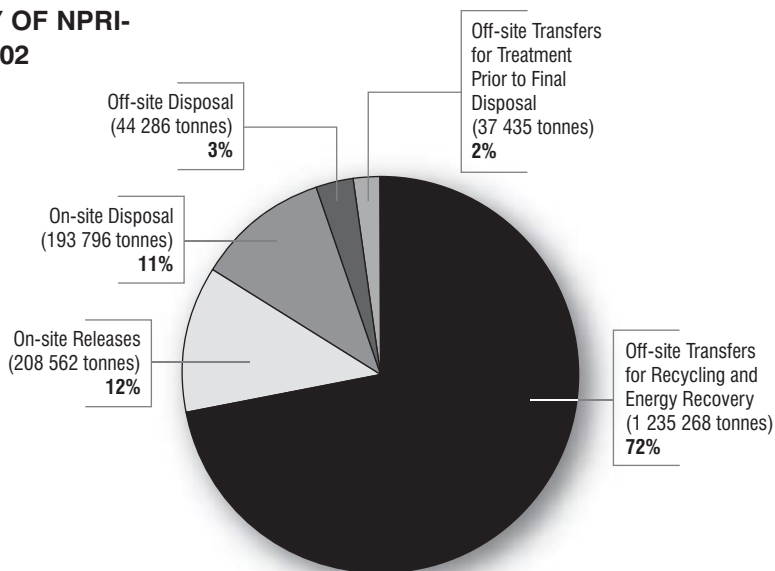

The releases and transfers of all pollutants in 2002 can be broken down as follows (see also **figure 2-1**):

- 208 562 tonnes (12%) – on-site releases;
- 193 796 tonnes (11%) – final disposal (on site);
- 44 286 tonnes (3%) – final disposal (off site);
- 37 435 tonnes (2%) – off-site transfers for treatment prior to final disposal; and
- 1 235 268 tonnes (72%) – off-site transfers for recycling and energy recovery.

(See **Appendix A** for definitions of release groupings.)

Figure 2-1

NATIONAL SUMMARY OF NPRI-POLLUTANTS FOR 2002

From 2001 to 2002, the following changes in releases and transfers off site took place (see also **table 2-1**):

- On-site releases increased by an estimated 27 445.9 tonnes (15.2%) from 2001.
- On-site final disposals decreased by 994 897 tonnes (83.7%) from 2001.
(See **Appendix B** for more information on on-site disposal.)
- Off-site final disposals increased by 594.4 tonnes (1.4%) from 2001.
- Off-site transfers for treatment prior to disposal decreased by 3 179.7 tonnes (7.8%) from 2001.
- Off-site transfers for recycling and energy recovery increased by 107 218.2 tonnes (9.5%) from 2001.

More information on the facilities that reported to the NPRI for the 2002 reporting year and a summary of individual pollutant releases per medium (air, water and land) can be found on the NPRI Web site at www.ec.gc.ca/npri.

Table 2–1**NATIONAL SUMMARY OF NPRI POLLUTANTS (2001–2002)**

	2001	2002	Change 2002–2001	% Change 2002–2001
Total Facilities	2 660.0	3 191.0	531.0	19.9
Total Reports	12 007.0	14 638.0	2 631.0	21.9
Pollutants Reported	201.0	208.0	7.0	3.5
1. On-site Releases (tonnes)				
Air	124 613.0	129 778.2	5 165.2	4.1
Water	51 589.7	72 969.0	21 379.0	41.4
Land				
Spills	33.7	715.2	681.5	2 022.2
Leaks	9.9	8.8	-1.1	-11.1
Other	4 688.0	4 901.7	213.7	4.6
Land Subtotal	4 731.9	5 625.8	893.9	18.9
Total On-site Releases	181 116.5	208 562.4	27 445.9	15.2
2. Final Disposal (tonnes)				
On-site Disposal				
Landfill	26 486.1	24 390.2	-2 059.9	-7.9
Land Treatment	879.8	2 401.8	1 522.0	173.0

Off-site Disposal				
Landfill	29 758.3	30 912.2	1 153.9	3.9
Land Treatment	2 472.3	2 307.6	-164.7	-6.7
Underground Injection	9 083.3	9 010.7	-72.6	-0.8
Storage	2 377.7	2 055.5	-322.2	-13.6
Total	43 691.6	44 286.0	594.4	1.4
3. Off-site Transfers for Treatment Prior to Final Disposal (tonnes)				
Physical Treatment	1 902.5	2 359.6	457.1	24.0
Chemical Treatment	12 196.0	8 041.3	-4 154.7	-34.1
Biological Treatment	2 465.7	961.5	-1 504.2	-61.0
Incineration	9 990.2	10 798.1	807.9	8.1
Treatment at a Municipal Sewage Treatment Plant	14 060.3	15 274.4	1 214.1	8.6
Total Off-site Treatment	40 614.6	37 434.9	-3 179.7	-7.8
4. Off-site Transfers for Recycling and Energy Recovery (tonnes)				
Recycling	1 118 247.7	1 226 344.9	108 097.2	9.7
Energy Recovery	9 801.9	8 922.8	-879.1	-9.0
Total Off-site Transfers for Recycling and Energy Recovery	1 128 049.6	1 235 267.8	107 218.2	9.5

Note: Because of rounding of release and transfer quantities, the totals may not equal the sum of the individual values.

3. Summary of Criteria Air Contaminants (CAC) Reported to the NPRI

In 2002, the criteria air contaminants (CAC) were added to the NPRI substance list so that more comprehensive data would be available to governments and the public. Information on CAC emissions enables governments to assess whether risk management by various industrial sources of CAC is reducing emissions. This kind of information is needed by governments so that they can meet the requirements of various inventories and programs, both domestic and international. For the modelling of air quality and other purposes, emission inventories must be completed for all sources of emissions (industrial, commercial, mobile, natural and household). These inventories containing all sources of emissions have been compiled for many years; they are known as comprehensive emission inventories. The collection of CAC data by the NPRI is a new and more efficient means of obtaining information about these emissions.

Table 3–1 summarizes by pollutant the air releases reported by the 3 048 facilities that met the reporting requirements for 2002. As can be seen, facility releases of CAC are not always the primary source of all releases to air in Canada.

Table 3–1

2002 CAC EMISSIONS COMPARED WITH 2000 NATIONAL COMPREHENSIVE CAC EMISSIONS

Pollutant	2002 CAC Reported under the NPRI (tonnes)	2000 National Comprehensive CAC Emissions (tonnes)*	% of 2000 CAC Emissions
Total Particulate Matter (TPM) < 100 microns**	226 454	16 372 382	1
Particulate Matter with a Diameter ≤ 10 microns (PM ₁₀)**	108 678	5 135 494	2
Particulate Matter with a Diameter ≤ 2.5 microns (PM _{2.5})**	61 058	963 305	6
Sulphur Dioxide (SO ₂)	1 977 312	2 352 424	84
Oxides of Nitrogen (expressed as NO ₂)	577 332	2 603 525	22
Volatile Organic Compounds (VOC)	244 021	2 751 607	9
Carbon Monoxide (CO)	974 327	11 282 385	9

* Includes all sources. See the 2000 comprehensive CAC inventory attached as **Appendix C**.

**Year 2000 Comprehensive CAC inventory includes both filterable and condensable particulate matter.

4. CEPA Toxic Substances Listed in the NPRI

4.1 Introduction

Some substances listed in the NPRI were added because individually, or as a member of a class of substances, they have been scientifically assessed and determined to meet the definition of toxic under the *Canadian Environmental Protection Act, 1999* (CEPA 1999). This section provides a general overview of the substances currently listed in the NPRI that met this definition as of December 18, 2003. That is also the effective date of the 2002 NPRI database referred to in this report. (Reporting for the 2002 calendar year had to be completed by June 1, 2003.)

4.2 CEPA Toxic Substances

CEPA 1999 is Canada's primary piece of federal pollution prevention and environmental legislation. The Act gives the federal government the tools for protecting the environment and human health, and establishes strict deadlines for controlling toxic substances.

Under the Act, a substance may be considered to be toxic if it enters, or may enter, the environment in a quantity or concentration or under conditions that:

- have or may have an immediate or long-term harmful effect on the environment or its biological diversity;
- constitute or may constitute a danger to the environment on which life depends; or
- constitute or may constitute a danger in Canada to human life or health.

For example, lead is a toxic substance. Exposure to even small amounts of lead can be hazardous to human health, especially for infants, young children and pregnant women. Environment Canada and Health Canada continue to assess the environmental and health risks of new and existing substances.

CEPA 1999 requires that toxic substances be managed to prevent or minimize the risks they pose to the environment and human health. Toxic substances that are bioaccumulative, persistent and result primarily from human activity are targeted for virtual elimination. The Minister of the Environment has two years to propose, and a further 18 months to finalize, "preventive or control" measures for substances that have been determined to be toxic by an assessment under the Act. These measures include management tools such as regulations, pollution prevention plans, economic instruments and codes of practice. More information can be found on Environment Canada's CEPA Environmental Registry at www.ec.gc.ca/CEPARegistry/default.cfm.

4.3 CEPA Toxic Substances Listed in the NPRI in 2002

Eighty-two substances in the 2002 NPRI have been determined to be toxic under CEPA 1999 (see **table 4-1**). Information on the release, disposal and recycling of hundreds of substances, including toxic substances, is reported to the NPRI. This makes it easier to understand, track and manage, through environmental indicators and regulatory and voluntary programs, the risks that toxic substances may pose to the environment and human health. More information on toxic substances in Canada can be found at www.ec.gc.ca/toxics and www.ec.gc.ca/CEPARegistry.

Table 4-1**CEPA TOXIC SUBSTANCES LISTED IN THE 2002 NPRI**

CAS No.	Substance	Substance/Class on the List of Toxic Substances
75-07-0	Acetaldehyde	
107-02-8	Acrolein	
75-05-8	Acrylonitrile	
68920-70-7	Alkanes, C ¹⁰⁻¹³ , chloro	
85535-84-8	Alkanes, C ⁶⁻⁸ , chloro	
NA	Ammonia (total)	
NA	Arsenic and its compounds	
1332-21-4	Asbestos (friable form)	
71-43-2	Benzene	
56-55-3	Benzo(a)anthracene	Polycyclic aromatic hydrocarbons
218-01-9	Benzo(a)phenanthrene	Polycyclic aromatic hydrocarbons
50-32-8	Benzo(a)pyrene	Polycyclic aromatic hydrocarbons
205-99-2	Benzo(b)fluoranthene	Polycyclic aromatic hydrocarbons
192-97-2	Benzo(e)pyrene	Polycyclic aromatic hydrocarbons
191-24-2	Benzo(g,h,i)perylene	Polycyclic aromatic hydrocarbons
205-82-3	Benzo(j)fluoranthene	Polycyclic aromatic hydrocarbons
207-08-9	Benzo(k)fluoranthene	Polycyclic aromatic hydrocarbons
117-81-7	<i>Bis</i> (2-ethylhexyl)phthalate	
74-83-9	Bromomethane	
106-99-0	1,3-Butadiene	
111-76-2	2-Butoxyethanol	
NA	Cadmium and its compounds	
7789-75-5	Calcium fluoride	Inorganic fluorides
56-23-5	Carbon tetrachloride	
75-69-4	CFC-11	Chlorofluorocarbons
75-71-8	CFC-12	Chlorofluorocarbons
75-72-9	CFC-13	Chlorofluorocarbons
76-14-2	CFC-114	Chlorofluorocarbons
76-15-3	CFC-115	Chlorofluorocarbons
224-42-0	Dibenz(a,j)acridine	Polycyclic aromatic hydrocarbons

CAS No.	Substance	Substance/Class on the List of Toxic Substances
53-70-3	Dibenzo(a,h)anthracene	Polycyclic aromatic hydrocarbons
189-55-9	Dibenzo(a,i)pyrene	Polycyclic aromatic hydrocarbons
194-59-2	7H-Dibenzo(c,g)carbazole	Polycyclic aromatic hydrocarbons
612-83-9	3,3'-Dichlorobenzidine dihydrochloride	
107-06-2	1,2-Dichloroethane	
75-09-2	Dichloromethane	
28679-13-2	Ethoxynonyl benzene	Nonylphenol and its ethoxylates
75-21-8	Ethylene oxide	
206-44-0	Fluoranthene	Polycyclic aromatic hydrocarbons
50-00-0	Formaldehyde	
353-59-3	(Halon 1211) Bromochlorodifluoromethane	
75-63-8	(Halon 1301) Bromotrifluoromethane	
75-45-6	HCFC-22	Hydrochlorofluorocarbons
41834-16-6	HCFC-122 and all isomers	Hydrochlorofluorocarbons
34077-87-7	HCFC-123 and all isomers	Hydrochlorofluorocarbons
63938-10-3	HCFC-124 and all isomers	Hydrochlorofluorocarbons
1717-00-6	HCFC-141b	Hydrochlorofluorocarbons
75-68-3	HCFC-142b	Hydrochlorofluorocarbons
118-74-1	Hexachlorobenzene	
NA	Hexavalent chromium compounds	
7664-39-3	Hydrogen fluoride	Inorganic fluorides
193-39-5	Indeno(1,2,3-c,d)pyrene	Polycyclic aromatic hydrocarbons
NA	Lead (and its compounds, except tetraethyl lead)	
NA	Mercury (and its compounds)	
109-86-4	2-Methoxyethanol	
NA	Nickel and its compounds	
27177-05-5	Nonylphenol hepta(oxyethylene) ethanol	Nonylphenol and its ethoxylates
84852-15-3	Nonylphenol, industrial	Nonylphenol and its ethoxylates
27177-08-8	Nonylphenol nona(oxyethylene) ethanol	Nonylphenol and its ethoxylates
25154-52-3	<i>n</i> -Nonylphenol	Nonylphenol and its ethoxylates
9016-45-9	Nonylphenol polyethylene glycol ether	Nonylphenol and its ethoxylates
26027-38-3	<i>p</i> -Nonylphenol polyethylene glycol ether	Nonylphenol and its ethoxylates
27986-36-3	Nonylphenoxy ethanol	Nonylphenol and its ethoxylates

CAS No.	Substance	Substance/Class on the List of Toxic Substances
104-35-8	2-(<i>p</i> -Nonylphenoxy)ethanol	Nonylphenol and its ethoxylates
20427-84-3	2-(2-(<i>p</i> -Nonylphenoxy)ethoxy) ethanol	Nonylphenol and its ethoxylates
7311-27-5	2-(2-(2-(<i>p</i> -Nonylphenoxy)ethoxy)ethoxy) ethanol	Nonylphenol and its ethoxylates
104-40-5	4-Nonylphenol	Nonylphenol and its ethoxylates
11104-93-1	Oxides of nitrogen (expressed as NO ₂)	
37251-69-7	Oxirane, methyl-, polymer with oxirane, mono(nonylphenol)ether	Nonylphenol and its ethoxylates
NA	Particulate matter with a diameter less than or equal to 2.5 microns (PM _{2.5})	
NA	Particulate matter with a diameter less than or equal to 10 microns (PM ₁₀)	
198-55-0	Perylene	Polycyclic aromatic hydrocarbons
85-01-8	Phenanthrene	Polycyclic aromatic hydrocarbons
NA	Polychlorinated dibenzo- <i>p</i> -dioxins and polychlorinated dibenzofurans	
129-00-0	Pyrene	Polycyclic aromatic hydrocarbons
7681-49-4	Sodium fluoride	Inorganic fluorides
2551-62-4	Sulphur hexafluoride	Inorganic fluorides
7446-09-5	Sulphur dioxide	
127-18-4	Tetrachloroethylene	
79-01-6	Trichloroethylene	
75-01-4	Vinyl chloride	
NA	Volatile organic compounds	Volatile organic compounds as defined in the Annex of the <i>Canada Gazette</i>

Notes: The list is up to date as of December 18, 2003; NA means no CAS number available at this time.

The substances identified as CEPA toxic in the NPRI are not always identical to those in the list of toxic substances in Schedule 1 of CEPA 1999. Sometimes this is because the NPRI refers to commercial products or common names rather than the scientific name that is often used by CEPA 1999. Sometimes, as in the case of CFCs, several substances listed in the NPRI correspond to a single class of substances in Schedule 1. In other cases, the NPRI list of CEPA-toxic substances is broader than that found in Schedule 1. For example, the NPRI lists nickel and its compounds, but Schedule 1 of CEPA lists only oxidic, sulphidic and soluble inorganic nickel compounds.

More detailed information on releases of substances shown in **table 4–1** can be found in a supplementary table at www.ec.gc.ca/npri.

5. Pollution Prevention

5.1 Introduction

Pollution prevention (P2) is defined in CEPA 1999 as “the use of processes, practices, materials, products, substances or energy that avoid or minimize the creation of pollutants and waste, and reduce the overall risk to the environment or human health”. As the cornerstone of CEPA 1999, pollution prevention is identified throughout the Act as the priority approach for the protection of the environment and human health.

Pollution prevention seeks to prevent the creation of pollutants rather than managing them after they have been created. This often results in cost savings for a facility.

Since 1997, the NPRI program has required facilities to report whether they are undertaking pollution prevention for listed substances throughout their operations. Facilities may also indicate the extent of such activities and any reductions in emissions that may have resulted. Pollution may include, but is not limited to, the following activities:

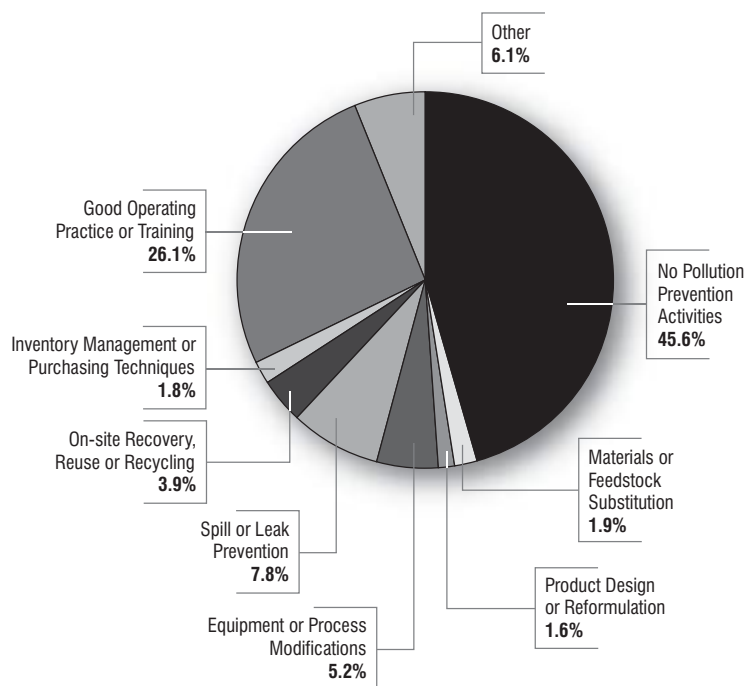

- materials or feedstock substitution;
- product design or reformulation;
- equipment or process modification;
- spill and leak prevention;
- on-site reuse, recovery or recycling;
- improved inventory management or purchasing techniques; and
- good operating practices and training.

5.2 Pollution Prevention in 2002

Beginning with the 2002 reporting year, the NPRI reporting form included a more descriptive breakdown of each of the P2 reporting categories. These new sub-categories assist reporting facilities in identifying activities that are reportable as P2. This further subdivision of categories was added after consultations with stakeholders held in 2001. In 2002, approximately 56% (2 534 of 4 504) of facilities reported some form of P2.

5.3 Distribution of Pollution Prevention

In 2002, over 45% of substance reports indicated that no pollution prevention had been undertaken. The most common type of pollution prevention reported was “good operating practice or training” (about 26%). (See **figure 5–1** for the distribution of P2 information.)

Figure 5-1**Distribution of Different Kinds of Pollution Prevention (P2) Information in 2002****5.4 Pollution Prevention and Reasons for Change in Releases, Transfers or Recycling**

Throughout the 2002 NPRI reporting form, facilities are required to give reasons for any change in their on-site releases, off-site transfers and off-site recycling from the previous year. One possible reason for such changes could be the implementation of P2 measures.

Of the 24 018 substance reports submitted to the NPRI in 2002:

- 496 substance reports gave P2 activities as the reason for changes in on-site release values;
- 262 substance reports gave P2 activities as the reason for changes in off-site transfers for disposal; and
- 131 substance reports gave P2 activities as the reason for changes in off-site recycling and energy recovery.

5.5 Pollution Prevention Planning for 2002

Beginning in 2002, facilities were asked whether they had drawn up and implemented pollution prevention plans for their operations. Pollution prevention planning is the process of examining current operations and developing a plan to eliminate or reduce pollution at the source. Facilities had the option of indicating if P2 plans were (a) prepared under the requirements of the pollution prevention planning provisions of Part 4 of CEPA 1999; (b) prepared or implemented for another government or Act of Parliament; or (c) prepared or implemented voluntarily. The answers to these questions helped form a more complete picture of pollution prevention in Canada.

Of the 4 530 facilities reporting to the NPRI in 2002, 690 facilities reported having a P2 plan:

- 19 facilities reported P2 planning for a CEPA 1999 requirement;
- 129 facilities reported P2 planning for another government or under another Act of Parliament; and
- 602 facilities reported voluntary P2 planning.

(The numbers do not total 690 because some facilities gave more than one reason for implementing a P2 plan.)

6. Confidential Information

Anyone who submits information to the NPRI may, under section 51 of CEPA 1999, request that the information be treated as confidential.

Section 52 of CEPA 1999 provides that:

Despite Part 11, a request under section 51 may only be based on any of the following reasons:

- the information constitutes a trade secret;
- the disclosure of the information would likely cause material financial loss to, or prejudice to the competitive position of, the person providing the information or on whose behalf it is provided; or
- the disclosure of the information would likely interfere with contractual or other negotiations being conducted by the person providing the information or on whose behalf it is provided.

At the time of publication of this report, 10 facilities had been granted confidential status for information provided to the NPRI for 2002. The following data were reported by those facilities for the 2002 reporting year:

- number of pollutant reports submitted: 24;
- total on-site releases: 481 tonnes;
- total off-site disposal: 2 936 tonnes;
- total off-site transfers for recycling and energy recovery: 141 tonnes.

Data presented in this document and other reports in the 2002 National Overview Series do not include the confidential information referred to above.

Appendix A: Overview of the NPRI

The National Pollutant Release Inventory (NPRI) is at the centre of the Government of Canada's efforts to track toxic substances. It is a legislated inventory of pollutants released to the environment. The NPRI was established in 1992 to provide Canadians information on releases of pollutants from facilities located in their communities, including quantities discharged to air, water, land, and underground injection and quantities sent to other facilities for disposal, treatment or recycling and energy recovery. It also supports a number of environmental initiatives by providing information that:

- helps governments and others to identify priorities for action;
- encourages industry to take proactive measures to reduce releases;
- allows for tracking of progress in reducing releases;
- supports international commitments; and
- provides information to support the development of new control instruments such as codes of practice, regulations and guidelines, etc.

The NPRI is a constantly evolving program. Public and stakeholder consultation is an integral part of the changes to the program. Since its inception, substances have been added and deleted, the thresholds at which substances are reported have been adjusted and the scope of the inventory has been expanded to collect data on recycling and pollution prevention activities. Further refinements are planned for future years.

The NPRI program is delivered by Environment Canada under the authority of the *Canadian Environmental Protection Act, 1999* (CEPA 1999). Owners or operators of facilities that manufacture, process, or otherwise use one or more of the NPRI-listed substances under prescribed conditions are required to submit an annual report to Environment Canada on the releases and transfers of those substances.¹ See **Appendix B** for definitions of releases, disposals and transfers.

All non-confidential information collected through the NPRI is available to the public on Environment Canada's Web site in the form of downloadable databases, reports and analyses, and through a query site that allows the user to view information submitted by an individual facility.

For more information, refer to Environment Canada's NPRI Web site at www.ec.gc.ca/npri or contact your nearest NPRI office.

What's New for the 2002 NPRI?

The following changes were made to the NPRI for the 2002 reporting year:

Addition of New Substances

- Hexavalent chromium compounds
- Criteria air contaminants (CAC)
 - Carbon monoxide (CO)
 - Oxides of nitrogen (NO_x)
 - Sulphur dioxide (SO₂)
 - Particulate matter (PM)
 - equal to or less than 2.5 microns in diameter (PM_{2.5})
 - equal to or less than 10 microns in diameter (PM₁₀)
 - total particulate matter (TPM)
 - Volatile organic compounds (VOCs)

¹The requirements for the 2002 NPRI were published in the Canada Gazette, Part I, on December 29, 2001.

Changes in Mass and Concentration Thresholds

- Cadmium (and its compounds): the threshold for reporting based on mass was reduced from 10 tonnes to 5 kg and 0.1% concentration.
- Arsenic (and its compounds), Lead (and its compounds), Hexavalent Chromium and Tetraethyl Lead: the threshold for reporting was based on mass reduced from 10 tonnes to 50 kg and 0.1% concentration.
- Chromium (and its compounds) no longer includes hexavalent chromium.

Changes Where Employee Threshold (20 000 hours) Does Not Apply

- Throughput reduced from 100 to 26 tonnes per year for non-hazardous, solid waste, biomedical and hospital waste incineration.
- Terminal operations (for storage/transfer of crude and refined petroleum products).
- Discharges from wastewater collection systems of 10 000 m³ or more into surface waters.

Changes to Exemptions for Specific Facilities

- Painting, stripping or rebuilding components for maintenance and repair of transportation vehicles now included in the NPRI.
- Terminal operations used in the distribution, storage of fuels for retail sale are now included in the NPRI.

Pollution Prevention

- Reporting of pollution prevention activities has been expanded.

Administrative Changes

- Facilities that reported in 2001 must notify Environment Canada if they're not reporting for 2002.

Changes in Definitions

- Facility – now includes pipeline installation.
- Other use – includes use or disposal.

NPRI Substance List for 2002

For the 2002 reporting year, there were 273 substances listed on the NPRI; 82 have been declared toxic under CEPA 1999. There were 241 substances listed with the original 1993. Other reports indicate NPRI reporting criteria of 10 tonnes and 1% concentration, excluding by-products. Thirty-two substances are listed with different reporting criteria – mercury, cadmium, arsenic, lead and their compounds, hexavalent chromium compounds, tetraethyl lead, 17 individual polycyclic aromatic hydrocarbons (PAHs), polychlorinated dibenzo-*p*-dioxins (dioxins)/polychlorinated dibenzofurans (furans), hexachlorobenzene (HCB) and seven CAC.

The CAC were added to the NPRI for the 2002 reporting year. As a result, the total number of substance reports submitted for the 2002 NPRI has almost doubled compared to 2001. Information on CAC is summarized separately from other NPRI substances which for the purposes of this report are referred to as “NPRI pollutants”.

The total list of NPRI substances for the 2002 reporting year can be found on the NPRI Web site at www.ec.gc.ca/npri.

2002 National Overview Series

The 2002 NPRI National Overview (referred to as the “2002 National Overview”) consists of the following series of documents:

- 2002 National Overview – Reporting Requirements;
- 2002 National Overview – Summary of Data;
- 2002 National Overview – On-site Releases of NPRI Pollutants;
- 2002 National Overview – Final Disposal and Off-site Transfers for Treatment Prior to Final Disposal; and
- 2002 National Overview – Off-site Transfers for Recycling and Energy Recovery.

The 2002 National Overview Series includes data as they appeared in the NPRI database on December 18, 2003.

In addition to the National Overview Series, Environment Canada has developed another report entitled *Informing Canadians on Pollution*. This report provides a snapshot of pollution from industrial and commercial companies in Canada. In addition to making progress on sector and pollutant releases and disposal and recycling trends, other highlights include special sections on toxic substances, pollution prevention, managing pollution in Canada, and tips on how communities and individuals can use the NPRI.

New Groupings for Releases and Transfers

The following groupings were used to summarize information collected through the NPRI for the 2001 reporting year and continued for the 2002 reporting period:

- On-site Pollutant Releases
 - air
 - water
 - land: includes spills, leaks and other
- Disposal
 - on-site disposal: landfill, land treatment and underground injection
 - off-site disposal: landfill, land treatment, underground injection and storage
 - off-site transfers for treatment prior to final disposal:
 - physical treatment
 - chemical treatment
 - biological treatment
 - incineration or thermal treatment where energy is not recovered
 - treatment at a municipal sewage treatment plant (MSTP)
- Off-site Transfers for Recycling and Energy Recovery
 - recycling
 - energy recovery

As a result of consultations with stakeholders, new groupings were developed for on-site releases. It should be noted that “releases to land” no longer include disposal. The new groupings are different from those found in the *Guide for Reporting to the National Pollutant Release Inventory 2002*. In 2003, these changes were included in the *Guide for Reporting to the National Pollutant Release Inventory 2003* and the software for reporting to the NPRI.

Appendix B: Detailed Data Elements Reported to the NPRI

On-site Releases

An on-site release is a discharge of an NPRI-listed pollutant to the environment, within the physical boundaries of the facility. This includes:

- emissions to air – discharges through a stack, vent or other point release, losses from storage and handling of materials, fugitive emissions, spills and accidental releases, and other non-point releases.
- releases to surface waters – discharges, spills and leaks, but not including discharges to municipal wastewater treatment plants (which are reported under off-site transfers for treatment).
- releases to land – spills, leaks, and other.

Final Disposal Activities – On Site and Off Site

The following activities or operations are included in the category classified as “final disposal” – on site and off site:

- containment – two forms of containment are identified:
 - i) landfill; and
 - ii) other storage;
- underground injection at an off-site location;
- land treatment – for the purpose of land application or land farming; and
- off-site final disposal for storage.

Off-site Transfers for Treatment Before Final Disposal

A shipment of an NPRI-listed substance may be transferred to an off-site location for treatment prior to final disposal. The treatment processes include:

- physical treatment (e.g., drying, evaporation, encapsulation or vitrification);
- chemical treatment (e.g., precipitation, stabilization or neutralization);
- biological treatment (e.g., bio-oxidation);
- incineration or thermal treatment where energy is not recovered; and
- treatment at a municipal sewage treatment plant.

Off-site Transfers for Recycling and Energy Recovery

A shipment of an NPRI-listed substance may be transferred to an off-site location for recycling and energy recovery. “Recycling” refers to activities that keep a material or a component of the material from becoming a waste destined for final disposal. Nine types of recycling operations are identified:

- recovery of solvents;
- recovery of organic substances (other than solvents);
- recovery of metals and metal compounds;
- recovery of inorganic materials (other than metals);
- recovery of acids and bases;
- recovery of catalysts;
- recovery of pollution abatement residues;
- refining or reuse of used oil; and
- other recovery, reuse or recycling activities.

An NPRI substance may be sent for energy recovery when the substance or the material containing it has sufficient energy content (BTU value) to allow its use as an alternative to fossil fuels or other forms of energy.
