## List of Data Tables

### ***Series A—Summary Data, Canada***

- 1 Total Health Expenditure, Canada—Summary
- 2.1–.3 Total Health Expenditure by Source of Finance, Canada, 1975 to 2000—Current Dollars
- 2.4–.5 Total Health Expenditure by Source of Finance, Canada, 1975 to 2000—Constant Dollars
- 3.1–.3 Total Health Expenditure by Use of Funds, Canada, 1975 to 2000—Current Dollars
- 3.4 Public and Private Share of Total Health Expenditure by Use of Funds, Canada, 1975 to 2000—Current Dollars

### ***Series B—Total Health Expenditure by Source of Finance, by Province/Territory and Canada***

- 1.1–.2 Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 1.3 Total Health Expenditure as a Percent of (Provincial/Territorial) G.D.P., 1975 to 2000—Current Dollars
- 1.4–.5 Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Constant Dollars
- 2.1–.2 Private Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 2.3 Private Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 2.4–.5 Private Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Constant Dollars
- 3.1–.2 Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 3.3 Public Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 3.4–.5 Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Constant Dollars

## List of Data Tables (cont'd)

### ***Series B—Total Health Expenditure by Source of Finance, by Province/Territory and Canada (cont'd)***

- 4.1–.2 Provincial Government Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 4.3 Provincial Government Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 4.4 Total Provincial Government Health Expenditure as a Proportion of Total Provincial Government Programs, by Province/Territory and Canada, 1975 to 1999—Current Dollars
- 4.5–.6 Provincial Government Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Constant Dollars
- 5.1–.2 Other Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 5.3 Other Public Sector Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 5.4–.5 Other Public Sector Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Constant Dollars
- 6.1–.2 Federal Direct Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 6.3 Federal Direct Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 6.4–.5 Federal Direct Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Constant Dollars
- 7.1–.2 Municipal Government Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 7.3 Municipal Government Health Expenditure as a Proportion of Total Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars
- 7.4–.5 Municipal Government Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Constant Dollars
- 8.1–.2 Social Security Funds Health Expenditure, by Province/Territory and Canada, 1975 to 2000—Current Dollars

- 5.1-.3 Provincial Government Drug Expenditure by Age and Sex, by Province/Territory and Canada. 1996 to 1998—Current Dollars
- 6.1 Estimate of Total Provincial Government Health Expenditure by Age and Sex, by Province/Territory and Canada, 1998—Current Dollars

## Acknowledgments

It is only through the contribution of many individuals and organizations that the production of *National Health Expenditure Trends, 1975–2000*, is possible. The Canadian Institute for Health Information (CIHI) expresses its gratitude to:

**The National Health Expenditure Expert Advisory Group** for their advice and comments related to National Health Expenditures and for their constructive review of the document:

- Dr. John Horne, Health Sciences Centre, Winnipeg, Manitoba
- Dr. Richard Plain, University of Alberta
- Dr. Robert G. Evans, University of British Columbia
- M. André Grenon, Health Canada
- Dr. Michael Wolfson, Statistics Canada
- Dr. Jeremiah Hurley, McMaster University
- Dr. Stephen Law, Ryerson Polytechnic University
- M. Jean Houde, Ministère de la santé et des services sociaux du Québec

**Data Suppliers** for their provision of data to the national health expenditure database:

- Health Canada, Statistics Canada and other federal departments reporting health care financial data
- the provincial and territorial governments
- the provincial and territorial Workers' Compensation Boards and la Commission de la santé et de la sécurité du travail du Québec
- A.C. Nielsen Canada
- the insurance industry, whose recent participation has enhanced our understanding of expenditures in the private sector:
  - The Canadian Life and Health Insurance Association Inc.
  - Blue Cross of Atlantic Canada
  - Maritime Medical Care
  - Croix Bleue du Québec
  - CUMBA
  - Greenshield Canada
  - Liberty Health
  - Manitoba Blue Cross (United Health Services Corporation)
  - Saskatchewan Blue Cross Medical Services Incorporated
  - Saskatchewan Blue Cross Group Medical Services
  - Alberta Blue Cross
  - Medical Services Association (BC Life)
  - CU&C Health Services Society
  - Association of Canadian Medical Colleges

- Provincial and territorial ministries for providing age and sex distributions for their respective drug subsidy and additional health benefit programs:
  - Newfoundland Medical Services Commission
  - Maritime Medical Care facilitated by the Nova Scotia Department of Health, Insured Programs Management and Clinical Rationalization
  - Atlantic Blue Cross facilitated by the New Brunswick Department of Health and Community Services, Medicare/Prescription Drug Program
  - Régie de l'assurance-maladie du Québec facilitated by the Quebec Ministry of Health and Social Services
  - Ontario Ministry of Health and Long-Term Care, Ontario Health Insurance Program and Drug Programs Branch
  - Manitoba Health and Ministry of Family Services, Employment and Income Assistance Division
  - Saskatchewan Health, Saskatchewan Drug Plan and Extended Benefits Branch and Saskatchewan Medical Services Branch
  - Alberta Blue Cross facilitated by Alberta Health and Wellness and Alberta Human Resources and Employment. Alberta Health and Wellness Extended Health Benefits.
  - British Columbia Ministry of Health and Ministry Responsible for Seniors, Medical Services Plan and Pharmacare Planning and Special Projects.
  - Northwest Territories Department of Health and Social Services.

**External Consultants to CIHI** for their technical expertise and assistance:

- Vern Hicks
- Denis Chénard, Eden Cloutier, and Terry Albert of the Hygeia Group

**CIHI** is responsible for the National Health Expenditure (NHEX) Database. The dedicated work of its NHEX section, Geoff Ballinger, Ian Button, Terry Campbell, Gilles Fortin, Eva Tsakonas, and Jingbo Zhang is essential to the classification and dissemination of data that describe Canadian health expenditure.

# Highlights

---

- Total health expenditure, in current dollars<sup>1</sup>, was estimated at \$84.0 billion in 1998, and is forecast to have reached \$89.0 billion in 1999 and \$95.1 billion in 2000.
- The average annual rate of growth of total health care spending declined from 11.2% between 1975 and 1991, to 2.6% between 1991 and 1996. It increased by 4.8% in 1997 and 6.4% in 1998, and is expected to have increased 6.0% in 1999 and 6.9% in 2000, reflecting projected increases in health care spending by provincial and territorial governments.
- Total health expenditure per capita was estimated at \$2,776 in 1998 and is expected to have been \$2,920 in 1999 and \$3,094 in 2000.
- Total health care spending as a percentage of Gross Domestic Product was 9.3% in 1998; the ratio is forecast to have remained at 9.3% in 1999 and 2000.
- In 1998, for the first time since 1991, public sector health expenditures grew faster than private sector expenditures. Consequently, the private sector share fell from its peak in 1997 of 30.2% to 29.9% in 1998. It is expected to have decreased to 29.5% in 1999 and 29.0% in 2000.
- The category of drugs ranks second after hospitals in terms of its share of total health expenditure. In 1997, expenditure on drugs overtook spending on physicians services. The share of total spending accounted for by drugs grew from a low of 8.4% in the late 1970s to 14.8% in 1998. In 2000, drugs are expected to remain ranked second with a share of 15.5%.
- Expenditure per capita varies among the provinces. In 1998, British Columbia and Ontario spent more overall per person on health care than any other provinces, at \$2,898 and \$2,875, respectively. New Brunswick, followed by Quebec, had the lowest expenditure per capita at \$2,548 and 2,586, respectively.
- Health expenditures vary considerably among different age and sex groups. After adjusting for differences in provincial age and sex distributions, Newfoundland, British Columbia and Alberta had the highest per capita provincial government expenditure in 1998, while New Brunswick and Prince Edward Island had the lowest.
- In 1998, people aged 65 and over, who comprised 12.3% of the population, accounted for over 47% of provincial/territorial government hospital expenditure in Canada; children under one year old accounted for 6%.

<sup>1</sup> All figures are in current dollars.

# Introduction

---

Canada's health system is financed by both the public and private sectors. Public sector funding includes payments by governments at the federal, provincial/territorial and municipal levels, and by Workers' Compensation Boards and other social security schemes. Private sector funding consists primarily of health expenditures by households and private insurance firms.

The Canadian Institute for Health Information (CIHI) tracks health spending by each source of finance in the National Health Expenditure Database (NHEX). This database contains a historical series of macro level health expenditure statistics by province and territory beginning in 1960. The Canadian Institute for Health Information assumed responsibility for the national health accounts, including the National Health Expenditure database, in 1995.

*National Health Expenditure Trends (1975–2000)* is CIHI's fourth annual health expenditure trends publication and provides detailed updated information on health expenditure in Canada. Similar in format to previous reports, this publication includes:

- Highlights of national health expenditure;
- An overview that includes health expenditure trends from 1975 to 2000; an update for 1998 which is now considered an estimate rather than a forecast; an outlook for 1999 and 2000; and
- Updated data tables, which contain estimates to 1998 and forecasts to 2000.

*Special features* of this year's publication are:

- An in-depth analysis of health expenditure by age and sex; and
- Estimates of provincial/territorial government health expenditure standardized for differences in the age/sex distribution of provincial populations.

In order to improve the quality of the data in the National Health Expenditure database the historical information appearing in earlier publications has been revised. A detailed explanation of the revisions can be found in the Technical Notes section under Historical Data Revisions.

More information on health expenditures and the methods used in the preparation of this document is available by contacting the NHEX section by telephone, (613) 241-7860 or by email: [nhex@cihi.ca](mailto:nhex@cihi.ca).

# Overview

## TOTAL HEALTH EXPENDITURE

### ■ Update—1998<sup>2</sup>

Canada's total health expenditure in current dollars, was an estimated \$84.0 billion in 1998. From 1997 to 1998 expenditures increased by \$5.0 billion or 6.4% (Figure 1). In constant (1992) dollars<sup>3</sup>, total health expenditure was an estimated \$78.2 billion in 1998, \$4.0 billion more than in 1997, or a 5.4% increase.

### ■ Trends—1975 to 1997

Over the period 1975 to 1991, Canada's total health expenditure grew at an average annual rate of 11.2%. Between 1991 and 1996, growth fell substantially to an average annual rate of 2.6%, and increased to 4.8% in 1997. In constant (1992) dollars health expenditure increased by an average annual rate of 3.8% from 1975 to 1991. Between 1991 and 1996, growth fell to only 0.9 percent, and increased to 3.5% in 1997.

### ■ Outlook—1999 and 2000

Expenditures are forecast to have reached \$89.0 billion in 1999 and \$95.1 billion in 2000, an increase of 6.0% in 1999 and 6.9% in 2000. In terms of constant (1992) dollars, expenditures are forecast to have reached \$81.6 billion in 1999 and \$85.6 billion in 2000, an increase of 4.4% in 1999 and 4.9% in 2000.

<sup>2</sup> In previous national health expenditure reports, 1998 figures were forecasts, this year the 1998 figure is based on more complete data and is presented in this report as an update.

<sup>3</sup> Current dollars measure actual expenditures in a given year. Constant dollars measure expenditures based on price levels prevailing in a base year (1992) i.e. removing the effects of inflation as measured by the specific price indexes used. See the Technical Notes section for additional information.

TOTAL HEALTH EXPENDITURE PER CAPITA

■ Update—1998

Total health expenditure per person in Canada was an estimated \$2,776 in 1998, an increase of \$144, or 5.5% from 1997 (Figure 2). In constant (1992) dollars, expenditure per capita was \$2,584, an increase of \$111, or 4.5% from 1997.

■ Trends—1975 to 1997

The average annual rate of increase in total health expenditure per capita was 9.8% from 1975 to 1991. Growth was lower from 1991 to 1996 with an average annual rate of 1.4%. In 1997 per capita health expenditure grew by 3.7%. In terms of constant (1992) dollars health expenditure per capita increased by an average annual rate of 2.6% from 1975 to 1991. From 1991 to 1996 expenditure per capita declined by two tenths of one percent, and increased by 2.4% in 1997.

■ Outlook—1999 and 2000

Per capita expenditure is expected to have increased at annual rates of 5.2% in 1999 and 6.0% in 2000. Per capita expenditure in 2000 is forecast to have been \$3,094, \$174 higher than in 1999. In constant (1992) dollars per capita, health expenditure is expected to have increased at annual rates of 3.5% in 1999 and 4.1% in 2000, when per capita expenditure is expected to have been \$2,784, \$109 greater than in 1999.

TOTAL HEALTH EXPENDITURE AND ECONOMIC GROWTH

■ Update—1998

In 1998, estimated total health expenditure was equivalent to 9.3% of Gross Domestic Product (GDP) (Figure 3), up from 9.0% in 1997. GDP is the value of all goods and services produced in Canada; the health care spending to GDP ratio is an indicator of the extent to which the nation’s resources are used in health-related activities.

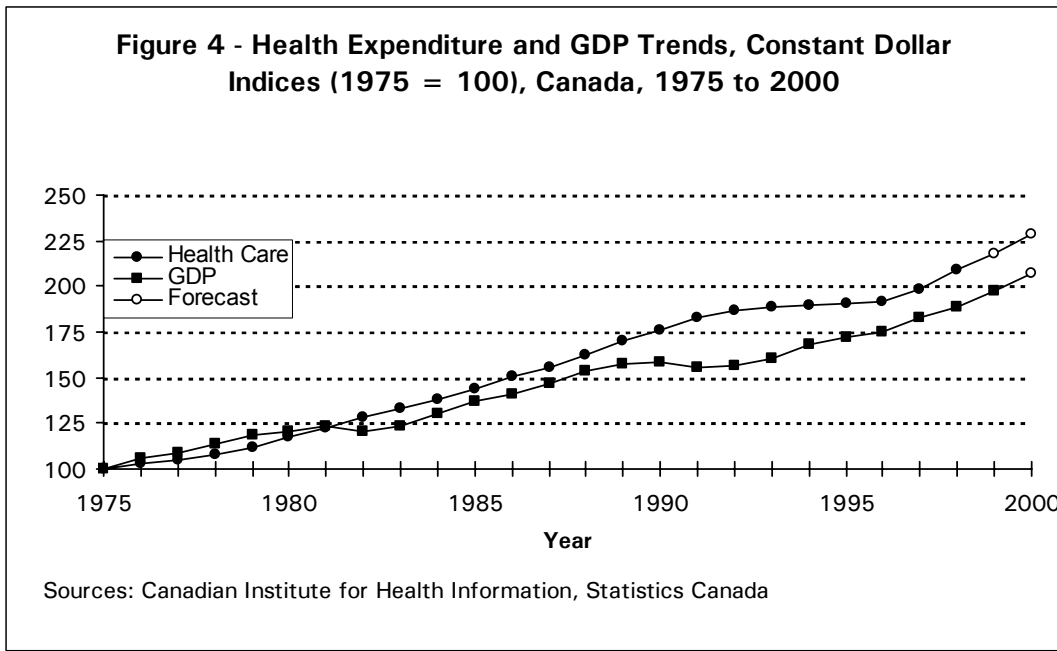

■ Trends—1975 to 1997

Total health expenditure, as a proportion of GDP was 7.0% in 1975. During the late 1970s, total health expenditures increased at rates that were almost identical to the rate of growth in GDP. The two rates of growth diverged during the early 1980s.

Real GDP fell during the 1982 recession, and did not recover to its pre-recession level until 1984 (Figure 4). Health expenditure continued to grow during this time. As a result, the ratio of total health expenditure to GDP increased sharply, from 6.8% in 1979 to 8.3% in 1983. Total health expenditures grew at slightly higher rates than the economy during three of the last 5 years of the 1980s. By the end of the decade the total health expenditure to GDP ratio was equivalent to 8.6%.

Canada experienced another recession from 1990 until 1992. GDP increased in 1992 but did not recover to pre-recession levels until 1993. Health expenditure grew at higher rates than GDP during 1990 to 1992, but with a gradual, consistent slowing in real rates of growth. The ratio of total health expenditure to GDP increased during these three years reaching a peak of 10.0% in 1992. Health expenditures grew more slowly than GDP between 1993 and 1997; consequently, the health to GDP ratio fell each year in that period, until 1998 when it increased by three tenths of one percentage point over the previous year.

■ **Outlook—1999 and 2000**

The ratio of total health expenditure to GDP is forecast to have remained at 9.3% in 1999 and in 2000 as forecasted health expenditures and GDP appear to have grown at nearly identical rates in these two years.

See Data Tables A.1 and B.1.3.

TOTAL HEALTH EXPENDITURE BY SOURCE OF FINANCE

■ Update—1998

Health expenditure by governments and government agencies in Canada (the public sector) was an estimated \$58.8 billion in 1998, equivalent to \$1,946 per capita, up by \$108 or 5.9% compared to 1997. Public sector spending represented 70.1% of total health care spending. Health expenditures by households and insurance firms (the private sector) were estimated at \$25.1 billion in 1998, equivalent to \$830 per capita, or 29.9% of total health care spending, down from 30.2% in 1997.

■ Trends—1975 to 1997

The average annual rate of growth in public sector spending on health care between 1975 and 1991 was 11.0%. There was a pronounced change in public expenditure trends following the 1990–1992 recession (Figure 5). During this period, governments introduced fiscal restraint measures, which affected spending for health and social programs. Average annual rates of growth fell to 0.5% from 1992 to 1996, lower than at any time in the past 20 years. In 1995 and 1996 there was virtually no growth and by 1997 public sector expenditure increased by 4.2%.

By comparison, the average annual rate of growth of private sector spending on health care was 11.6% from 1975 to 1991. From 1992 to 1996 it was 4.3%. Private sector growth rates were considerably higher than the public sector rates during this period and, as a result, the private sector share of total health expenditure increased by 4.3 percentage points during the five years, reaching 30.2% by 1997.

In terms of constant dollars, private sector expenditure grew more rapidly than public expenditure during the last half of the 1970s (Figures 6 and 7). During this time, real growth rates in the private sector averaged 5.1% annually, while public expenditure grew at real rates of 2.6% annually. Rates converged in the early 1980s, and from 1983 to 1990 the real average annual growth rates were almost identical in the two sectors, averaging 4.2% in the private sector and 4.1% in the public sector.

Public expenditure continued to increase during the first two years of the 1990–1992 recession, at annual real rates averaging 2.9%. In 1992, however, the real growth rate of public expenditure dropped to 1.9%. In 1993 there was a decline of seven tenths of one percent with further declines in the next 3 years. By 1997 the rate had increased by 3.0%.

During the six years after 1991, private expenditure continued to have real growth rates averaging 4.0% per year. The different trends in private and public expenditures after 1991 explain in large part the rapid growth of the private sector share to 1997.

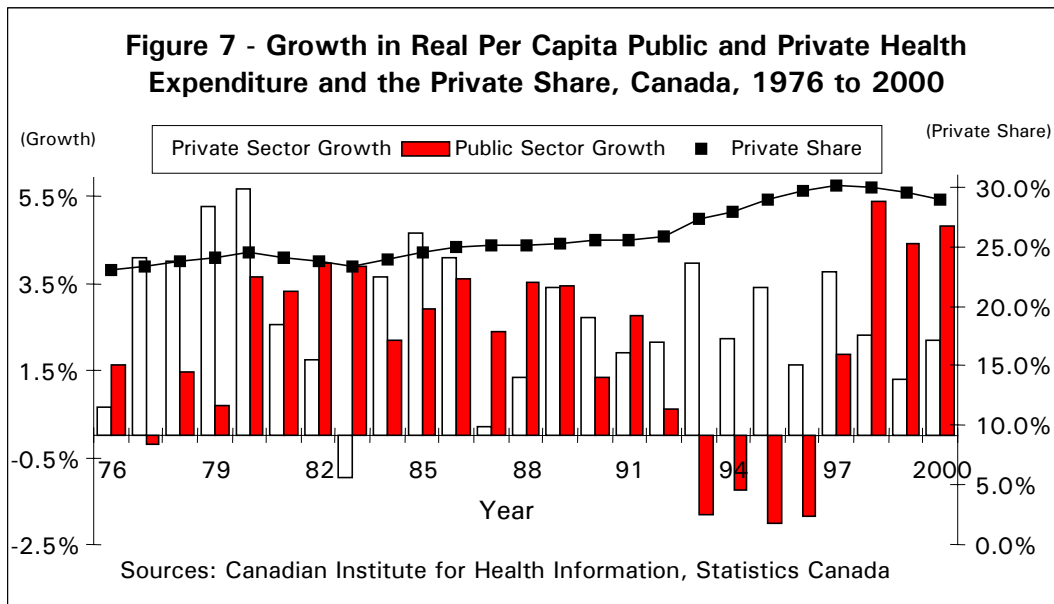

See Data Tables A.2.1, A.2.2, A.2.4, and A.2.5.

### ■ **Outlook—1999 and 2000**

Public sector expenditure is forecast to have been \$62.8 billion in 1999 and \$67.6 billion in 2000. The growth rates associated with these increases are 6.7% and 7.7%, respectively, reflecting increased spending by governments on health. Private sector expenditure is forecast to have reached \$26.2 billion in 1999 and \$27.5 billion in 2000, assuming growth rates of 4.5% and 5.0%, respectively.

In terms of constant (1992) dollars, public expenditure is forecast to have been \$58.2 billion in 1999 and \$61.5 billion in 2000, resulting in respective growth rates of 5.3% and 5.7%. Private sector expenditure is forecast to have reached \$23.4 billion in 1999 and \$24.1 billion in 2000, with growth rates of 2.1% and 3.0%, respectively.

The private sector accounted for 29.5% of total expenditure in 1999, down from 29.9% in 1998. In 2000, the private share is expected to have fallen again to 29.0% of total health spending.

## Public Sector Health Expenditure by Source of Finance

Health expenditures by governments and government agencies (the public sector) are financed by three levels of government—provincial and territorial governments; federal government direct health care spending; municipal government and, by Workers' Compensation Boards and other social security schemes. The distribution of public sector expenditure among these four sources of finance is shown in Table 1. Provincial government expenditure was \$8.7 billion in 1975, accounting for 93.6% of public sector expenditure and 71.4% of total expenditure that year. The other public sources together totaled \$0.6 billion, or 6.4% of the public sector and 4.8% of total expenditure in 1975. In 1998, provincial/territorial government expenditure was \$54.1 billion, nearly the same share of the public sector as it was in 1975 at 91.9%, but falling from 71.4% to 64.4% of total expenditure.

**Table 1—Distribution of Public Sector Health Expenditure by Source of Finance, Canada, 1975 and 1998**

|                                    | 1975           |              | 1998            |              |
|------------------------------------|----------------|--------------|-----------------|--------------|
|                                    | (\$' 000,000)  | (%)          | (\$' 000,000)   | (%)          |
| Provincial/Territorial Governments | 8,710.4        | 93.6         | 54,101.2        | 91.9         |
| Federal Direct                     | 398.3          | 4.3          | 3,088.9         | 5.2          |

Source: Canadian Institute for Health Information

### *Federal Transfers*

National health expenditures are reported based on the principle of *responsibility for payment* rather than on the source of the funds. It is for this reason that federal health transfers to the provinces are included in the provincial government sector. Federal health transfers are a combination of cash and tax point transfers in support of health care to each province and territory. Applying the 1975/1976 base year program costs to the EPF component of federal health transfers<sup>4</sup> and including both cash and the value of the tax points, total federal health transfers in 1975 amounted to \$3.39 billion or just under 39% of provincial and territorial government health expenditure. By 1995, federal health transfers amounting to \$16.1 billion had declined to 33% of provincial/territorial government health expenditure. As transfer funding formulas were changed and inflation moderated, the growth in total health transfers fell from double-digit rates in the 1970s and early 1980s to less than 2% by 1995.

In April 1996 the Canada Health and Social Transfer (CHST) was introduced. The CHST is a block fund to the provinces in support of health care, post secondary education, social assistance and other social programs. Provinces can allocate the CHST to health and other social programs according to their specific priorities. Nonetheless, the 1999 federal

<sup>4</sup> The components of federal health transfers prior to the introduction of the CHST in April 1996 include Established Program Financing (EPF), the health portion of the Canada Assistance Plan (CAP), the Health Resources Fund, and transfers by the Department of Indian and Northern Development to Indians and the Inuit for hospital and medical care.

government budget allocated an additional \$11.5 billion dollars in cash transfers to the provinces on an equal per capita basis over 5 years. The federal government designated this money specifically for health care. Most of the funds (\$8.0 billion) were to be in the form of future-year increases in the CHST, with a \$3.5 billion supplement available to the provinces and territories beginning in 1999.

An additional \$2.5 billion over 4 years beginning in 2000/2001 was allocated to the CHST in the February 2000 federal budget to fund both post-secondary education and health. The health accord signed by the federal and provincial governments on September 11, 2000, further supplemented the CHST adding gradual annual increases that will take the cash component of the CHST from \$15.5 billion in 2000/2001 to \$21 billion by 2005/2006.

The September health accord added an additional \$2.3 billion in transfers by the federal government to be paid out over five years that was outside of the CHST mechanism. Specifically, \$500 million was allocated in 2000/2001 for health information technology. Another \$1.0 billion was allocated over two years beginning in 2000/2001 to the Medical Equipment Fund which is intended to help in the purchase of major medical equipment such as magnetic resonance imaging units. A further \$800 million was allocated over 4 years beginning in 2001/2002 to the Health Transition Fund for Primary Care which is intended to ease pressures in emergency rooms and reduce waiting times. In addition, the 1999 federal budget allocated nearly \$1.4 billion over four years for investment in health information, research and prevention.

The increases in federal transfers will be reflected primarily in increased expenditures by the provincial and territorial governments during the next several years.

#### *Direct Federal Health Expenditure*

In 1998 nearly 30 federal government departments and agencies provided direct health care services to Canadians accounting for 3.7% of total expenditure on health. The three major contributors of federal direct health expenditures were Health Canada, which funded 60%, the Department of Veterans Affairs (20%) and the Medical Research Council (10%).

#### *Social Security Funds*

Workers' Compensation Boards which were shown as a separate category in previous reports are now included under Social Security Funds together with the Quebec Drug Insurance Fund. Both Workers' Compensation Boards and the Quebec Drug Insurance Fund meet the conditions of Social Security Funds. Social Security Funds are financially autonomous social insurance schemes that are imposed and controlled by a government authority. They generally involve compulsory contributions by employees, employers or both, and the government authority determines the terms on which benefits are paid to recipients.

Workers Compensation Boards operate under provincial and territorial statute and are considered agencies of the provincial/territorial governments. They involve compulsory contributions by employers who pay a percentage of their total payroll depending on the accident experience of each category of employer.

On January 1, 1997 the Quebec Ministry of Health and Social Services, through the Régie de l'assurance-maladie du Québec (RAMQ) introduced a universal drug program that covered residents of the province who were not otherwise covered by the provincial program or by private health insurance generally offered through employment. Drug claims for these participants are paid from the Drug Insurance Fund. This fund is self-financed through the compulsory payment of premiums generally by the self-employed and employees of organizations that do not offer private drug insurance as a benefit of employment.

This component of the Quebec drug program is considered to be a social security scheme, while the remaining portion of the program that is paid through the Quebec Ministry of Health and Social Services is included as a provincial government expenditure.

In 1997 and 1998, the Quebec Drug Insurance Fund spent \$172 million and \$218.2 million, respectively, on claims. Preliminary data indicate that \$267.0 million was spent in 1999, and CIHI estimates that claims from this fund will have been approximately \$307.8 million in 2000.

### Private Sector Health Expenditure by Source of Finance

Private sector expenditure in the National Health Accounts has three distinct components: household out-of-pocket expenditure, insurance expenditure and non-consumption expenditure.<sup>5</sup> The distribution of private expenditure between these three sources of finance is shown in Table 2. Out-of-pocket expenditure was estimated at \$13.8 billion in 1998, an increase of \$6.3 billion over the last ten years. Out-of-pocket expenditure accounted for 58.1% of private sector expenditure in 1988 and dropped to 54.8% in 1998 as expenditure by insurance firms grew more rapidly. The share of non-consumption expenditure dropped from 12.7% to 8.3% during the same period (Table 2).

**Table 2—Distribution of Private Sector Health Expenditure by Source of Finance, Canada, 1988<sup>6</sup> and 1998**

| Source of Finance         | 1988            |              | 1998            |              |
|---------------------------|-----------------|--------------|-----------------|--------------|
|                           | (\$' 000,000)   | (%)          | (\$' 000,000)   | (%)          |
| Household (out-of-pocket) | 7,435.3         | 58.1         | 13,752.9        | 54.8         |
| Private Health Insurance  | 3,734.2         | 29.2         | 9,278.4         | 37.0         |
| Non-Consumption           | 1,625.9         | 12.7         | 2,074.5         | 8.3          |
| <b>Total Expense</b>      | <b>12,795.4</b> | <b>100.0</b> | <b>25,105.8</b> | <b>100.0</b> |

Source: Canadian Institute for Health Information

<sup>5</sup> Non-consumption expenditure includes a number of heterogeneous components, such as hospital non-patient revenue, capital expenditures for privately owned facilities and health research.

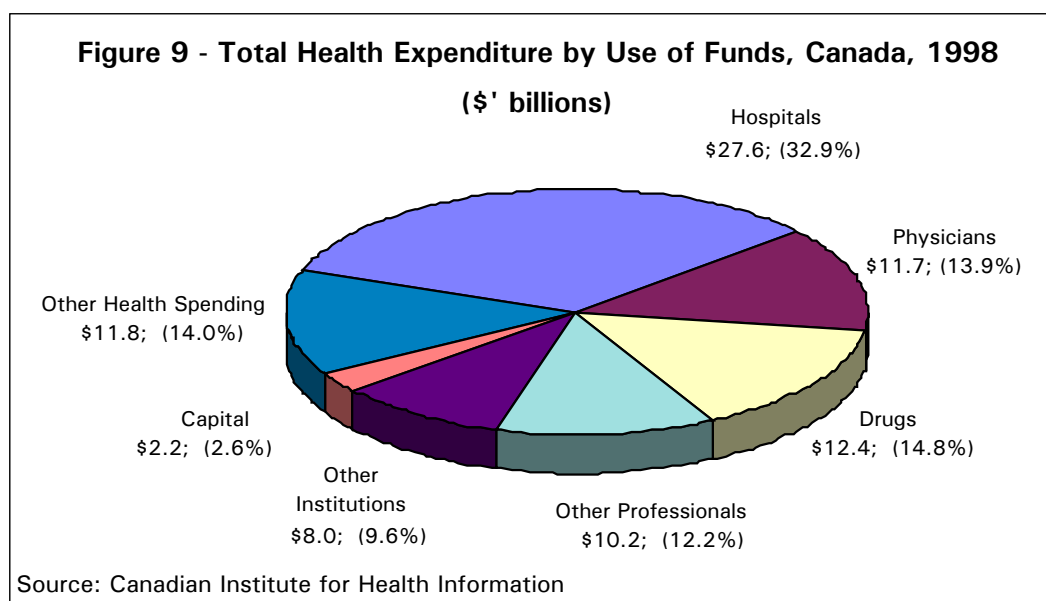

<sup>6</sup> Private sector data were revised following a methodology review in the early 1990s. The revised private sector data incorporated information estimated directly from insurance, out-of-pocket and non-consumption sources for 1988 and subsequent years. See the Definition of the Private Sector near the end of the publication, for further details.

Insurance firms increased their share of private expenditure by nearly eight percentage points during the ten-year interval (1988–1998) and in 1998 were responsible for over one-third of private health expenditure. Insurance expenditure grew more rapidly than out-of-pocket expenditure during most of the 1980s and 1990s, but rates of growth converged in the mid-1990s. In 1996 and 1997 growth rates were nearly identical. By 1998 insurance had a growth rate nearly identical to what it had been in 1993 at just over 9.6%, while household out-of-pocket expenditure grew at 3.2%, the lowest rate in the ten-year series. (Figure 8).

## TOTAL HEALTH EXPENDITURE BY USE OF FUNDS

Health dollars are used to purchase health care goods and services, to provide capital investment, to administer public and private insurance plans and public health programs, and to fund research. These uses are grouped into seven major categories throughout most of the National Health Expenditure data series (Figure 9).

This section discusses the public and private shares of total health expenditure and the shares of the major categories between the public and private sectors and refers to Figures 9 to 14.

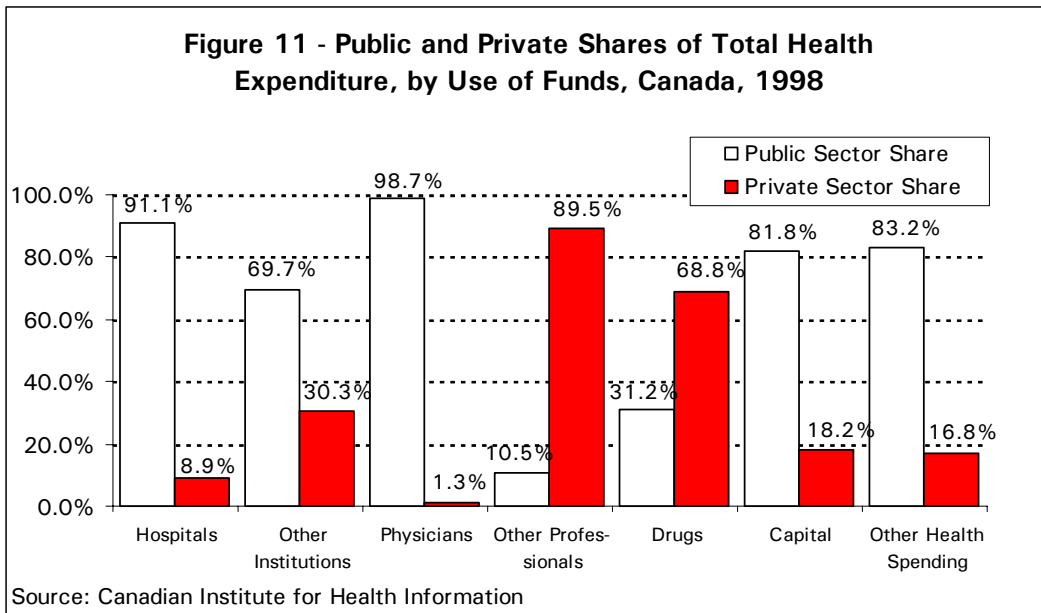

See Data Tables A.3.1 to A.3.4 and C.1.1. to C.4.4.

### ■ Hospitals

Canadians spent \$27.6 billion on hospital care during 1998. Hospital care is the largest category of health expenditure, accounting for 32.9% of total expenditure in 1998. This is down from a high of 45.2% of total health spending in 1976. Expenditure on hospitals did not increase as rapidly as total health expenditure from 1975 to 1998 and total spending on hospital care fell in 1994, 1995, and 1996, then increased in 1997 and 1998 (Figure 10). Hospital expenditure is forecast to have grown in 1999 by 3.6%, to \$28.6 billion, and by 5.6% in 2000 to \$30.2 billion. The hospital share of total health spending dropped slightly to 32.9% in 1998 from 33.0% in 1997, and is expected to have declined further to 32.2% in 1999 and 31.8% in 2000.

Public sector spending on hospitals was \$25.2 billion in 1998, accounting for 91.1% of total spending on hospitals (Figure 11).

Public and private sector expenditure on hospital services increased consistently from 1976 until 1992. Public sector spending for hospitals in 1992 was \$24.1 billion with a share of 90.5%. Beginning in 1993 and continuing to 1996 public expenditure on hospitals declined. The private sector experienced similar declines beginning in 1994. A possible explanation for these trends may be in the complementary nature of public and private hospital expenditure. Hospital capacity in the public sector fell in the 1990s as public authorities closed beds. This may be reflected in the private sector by reduced expenditures for semi-private accommodation, ancillary services and care of uninsured persons.

Hospital expenditures financed by the private sector amounted to \$2.5 billion in 1998, or 8.9% of total hospital expenditure. Households and insurance firms together spent \$1.1 billion in 1998 providing income to hospitals for patient services<sup>7</sup>, virtually unchanged from 1997. Non-patient revenue earned from investments, food services, real estate, parking, rentals, donations and other sources provided the remainder of the private sector. Hospital expenditures financed from these sources totaled \$1.3 billion in 1998, falling for the fourth straight year from a high of \$1.7 billion in 1994.

The distribution of expenditure financed by insurance, households (out-of-pocket expenditure) and Non-Consumption in 1998 is shown in Table 3.

**Table 3—Private Sector Health Expenditure, by Source of Finance and Use of Funds, Canada, 1998**  
((\$' millions)

|                            | Households<br>(Out-of-Pocket) | Insurance      | Non-<br>Consumption | Total           |

## ■ Drugs

Retail sales<sup>8</sup> of prescribed and non-prescribed drugs together constituted the second largest category of health expenditure in 1998 at \$12.4 billion, an increase of 9.5% over 1997. Expenditure for drugs has increased more rapidly than total expenditure, with the result that the share of total health expenditure allocated to drugs increased from (a low of) 8.4% in the late 1970s to 14.8% in 1998 (Figure 9). Spending on drugs is forecast to have increased by another 8.9% in 1999 to \$13.5 billion and by 9.0% in 2000 to \$14.7 billion, or 15.5% of total health care spending.

<sup>7</sup> Income to hospitals for patient services includes charges for preferred accommodation, care of non-residents, chronic care co-payments, uninsured services and other patient services.

<sup>8</sup> The drug category does not include drugs dispensed in hospitals and generally in other institutions. These are included in the categories of hospitals and other institutions.

Non-prescribed drugs, which include over-the-counter drugs and personal health supplies, amounted to 25% of total expenditure on drugs in 1998 (Figure 12).

In 1976, the private sector accounted for over 75% of expenditure for prescribed drugs; by 1992 it had decreased to 52.8%. The share of prescribed drugs financed from private sources has increased steadily since 1992. In 1998 the share was 58.6%, or \$5.5 billion.

## ■ Physicians

Physicians services constituted the fourth largest category of total health expenditure in 1998 at \$11.7 billion, representing 13.9% of total health expenditure. Expenditure for physicians services grew at above average rates through the mid-1980s, and peaked at 15.7% of total expenditure in 1987. Expenditure grew at below average rates during the 1990s, leading to a decline in the share of total expenditure. Physician expenditure is forecast to have grown by 4.4% in 1999 and 4.9% in 2000, below the rates recorded in other major expenditure categories. As a result, the share of total health spending accounted for by physicians services is forecast to have declined further to an estimated 13.5% in 2000.

Just under 99% of total physicians services were financed from public sector sources in 1998. Public sector expenditure on physicians has remained above 98% of total physician expenditure since 1975. The private share of physician expenditure was highest in the decade from 1976 to 1986, when a number of provinces permitted supplementary charges to patients (sometimes referred to as 'extra billing' or 'balance billing'). The private share reached a low of 0.9% in 1991; by 1998 the private share of physician services had reached its highest level since 1986, at 1.3%.

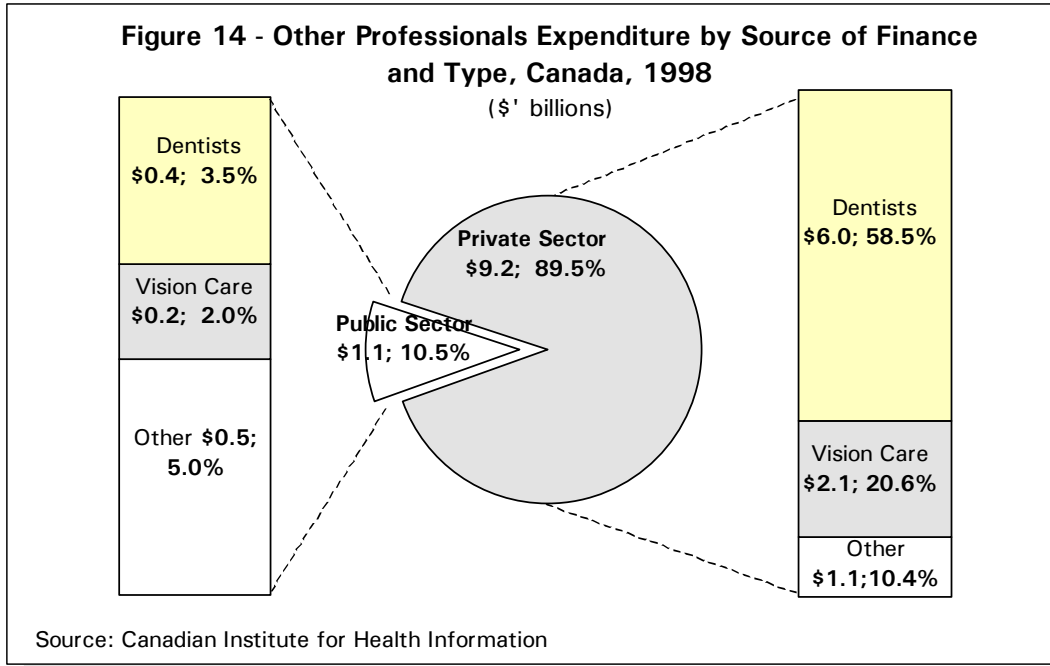

Physicians services was the second largest category of public sector health expenditure in 1998 at 19.6%. It has maintained a relatively stable share of public sector expenditures since 1975.

Households account for almost all private spending for physicians services. Insurance of supplementary charges to patients for medically necessary services was discouraged prior to the Canada Health Act, and such charges are not permitted under the Act. Physician charges for uninsured services and administrative fees have not been insured as explicit benefits of most insurance plans, but they may be insured under broad coverage terms that include care not covered by public plans.

## ■ Other Professionals

The broad category of other professionals includes primarily care provided by dentists and denturists, optometrists and opticians, chiropractors, physiotherapists and, private duty nurses. The category of other professionals accounted for \$10.2 billion or 12.2% of total expenditures in 1998 and has maintained the highest percentage of private spending of all the major categories. The private share declined until 1981 reaching a low of 81.7%, and gradually increased to almost 90% in 1998. The private sector growth rates of this category have been more consistent than in other categories, averaging 11.5% through the 1980s and 6.3% from 1990 to 1997. The highest annual growth rates were from 1975 to the early 1980s, a period when the private sector share declined by over five percentage points. Just under two-thirds of expenditure for other professionals is for dental care.

In 2000, the category of other professionals is expected to increase to \$11.2 billion, with a rate of growth of 4.8%. The rate of increase of this category has been second only to the increase in drug expenditures over the past five years.

Dental care, followed by vision care, are the major discrete categories of expenditure in both the public and private sector for other professional services (Figure 14). In the private sector, insurance firms accounted for over half the amount spent for dental care in 1998. In the case of vision care in the private sector, households accounted for over 80% of spending. Households also accounted for the majority of amounts spent for professionals providing other than dental or vision care e.g. physiotherapists, chiropractors, podiatrists, massage therapists and private duty nurses. Estimates are not reported separately for these professions by private sector data sources.

### ■ Other Institutions

In 1998 the category of other institutions, which includes nursing homes and residential care facilities, accounted for 9.6% of total expenditures, or \$8.0 billion. Other institutions' share of total health expenditure is forecast to have been 9.5% in 1999 and 9.4% in 2000.

Public expenditure is the main source of finance for other institutions. In many provinces public responsibility is split between provincial and municipal governments and/or regional authorities; funding is often provided both by health and social services departments. The public share of other institutions in 1998 was 69.7%. The public sector share has varied over the last twenty years, fluctuating between 71% and 75% between 1975 and 1993, reaching the highest level in the early 1980s. In 1994 the public sector share fell below 70% for the first time in the series. Private expenditure for other institutions grew more rapidly than public expenditure from 1993 to 1998, with its share being 30.3% in 1998.

## ■ Other Health Spending

Other health spending is a broad category that includes several heterogeneous sub-categories. The sub-categories with the greatest impact are public health, which includes prevention and promotion activities and infrastructure costs to operate health departments; health research<sup>9</sup>; and, prepayment administration, the administrative expenses of providing health insurance. The remaining categories include medical transportation, hearing aids and appliances, occupational health and voluntary health associations and explicitly identified home care.<sup>10</sup> In 1998, other expenditures accounted for \$11.8 billion or 14.0% of total health expenditure.

Public sector sources accounted for 83.2% of other expenditures in 1998, most of which was public health.

The broad category of other expenditures has grown faster than total health expenditure every year since 1984, but one (1987). In 1998 it is estimated to have grown at 7.2% which is eight tenths of one percentage point higher than the growth of total health expenditure. This trend is expected to continue in 1999 and 2000 when it is forecast to have increased by 6.9% and 9.3% respectively, reaching \$13.8 billion in 2000.

---

<sup>9</sup> Research funded by pharmaceutical companies is funded from drug sales and included in the drugs category.

<sup>10</sup> Certain services that are identified by data sources as home care are included under the broad category of "other—other Health Spending". Private nursing care in the home, however, would be included in the "other—other professionals" category. Home care programs provided by hospitals are included in the hospitals category. Support services such as domestic maintenance and delivery of meals are considered to be social services within the current definition of home care and are removed where identified.

## HEALTH EXPENDITURE IN THE PROVINCES AND TERRITORIES

Health expenditure per capita varies among provinces as a result of different age distributions.<sup>11</sup> Population density and geography also affect health expenditure, particularly in the case of the territories. Other factors that affect health expenditure include population health needs and the manner in which health care is delivered (including the balance between institutional and ambulatory care). The manner in which health care is financed is also an important consideration, including the degree of public coverage and private insurance for services not included in the Canada Health Act and the level of remuneration of health personnel.

Health expenditure per capita is highest in the territories, largely as a result of their large geographical areas and low population densities (Table 4). Expenditure per capita is quite evenly distributed among the provinces, with British Columbia and Ontario ranking highest. Manitoba, Saskatchewan and Nova Scotia occupy third to fifth positions.

Health expenditure as a percent of GDP shows greater variation than expenditure per capita, ranging from a low of 7.4% in Alberta to highs of 13.0% and 13.8% in Newfoundland and the Northwest Territories, respectively.

**Table 4—Health Expenditure Summary, by Province/Territory and Canada, 1998**

|               | Expenditure   | Percent Distribution | Total Expenditure per Capita |                  | Total Health Exp. as Percent of GDP | Public Sector Exp. per Capita | Private Sector Exp. per Capita | Public Sector as Percent of Total |

<sup>11</sup> Provincial comparisons in this discussion are based on figures that are not adjusted for variations in age and sex. For age sex standardized comparisons see the Analytical Focus section of this report.

In 1998, the public sector was responsible for 70.1% of Canadian health expenditure. The public sector share, with a median (mid-point) of 72.6%, varied considerably among the provinces and territories. It exceeded 84% in the Yukon and Northwest Territories, and was the lowest in Ontario (66.7%).

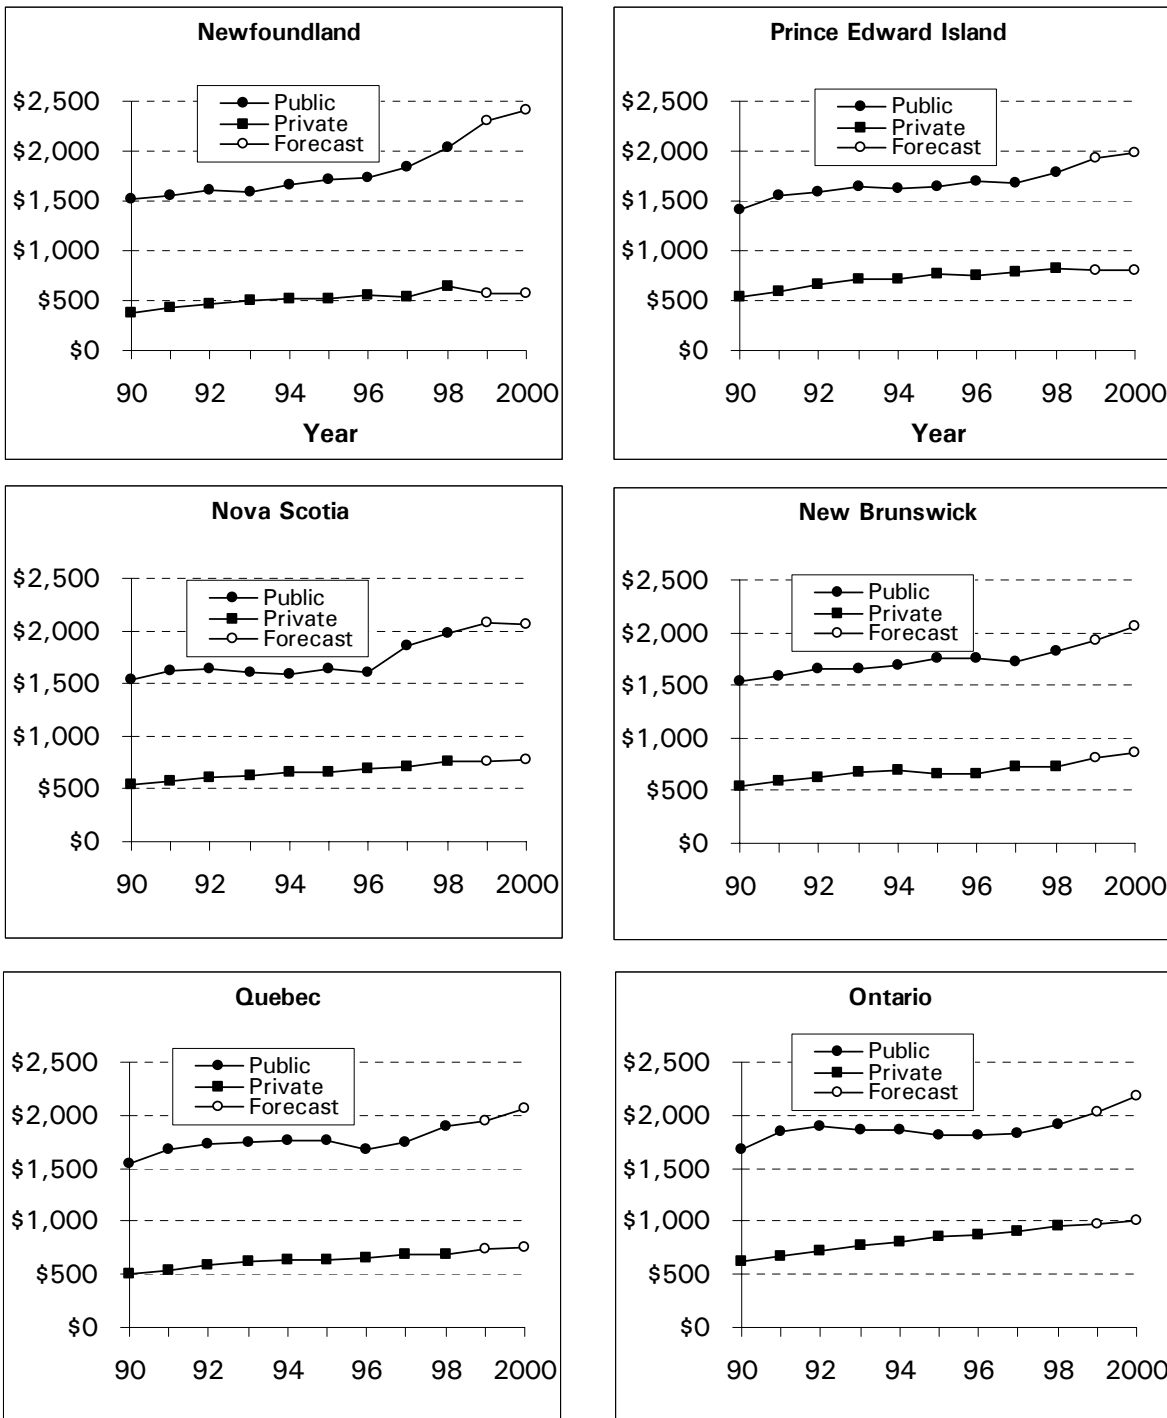

Public sector expenditure per capita averaged \$1,946 in 1998. After the territories, Manitoba, British Columbia, and Saskatchewan had the highest public sector expenditure; Prince Edward Island, New Brunswick and Alberta had the lowest.

Private sector expenditure averaged \$830 per capita. Ontario led the twelve jurisdictions, followed by Alberta and British Columbia.

The 1990s witnessed a leveling of health expenditures, with little growth in expenditure per capita between 1992 and 1997. Expenditure per capita began to show noticeable growth in most provinces since 1997 with accelerated growth in many provinces into 1998. Variations of this trend are expected to have continued in 1999 and 2000.

Public sector expenditure per capita declined in all twelve jurisdictions at some time during the 1990s, although the timing and duration of expenditure reductions varied. Quebec, Saskatchewan and Alberta experienced the sharpest declines, while the decline in Ontario was the most protracted with declines in each of the four years from 1993 to 1996 (Figure 15). All jurisdictions recovered from their declines during the latter half of the decade. British Columbia experienced the most stability in public sector expenditure per capita during the five years from 1993 to 1997, and stayed at or near the top of provincial rankings during that time. If present forecasts are correct, Manitoba and Newfoundland will have the highest levels of public expenditure per capita among the provinces in 2000, while Prince Edward Island, New Brunswick and Quebec are expected to have the lowest.

Figure 15 (cont'd)—Public and Private Sector Health Expenditure per Capita, 1990 to 2000, by Province and Territory—Current Dollars

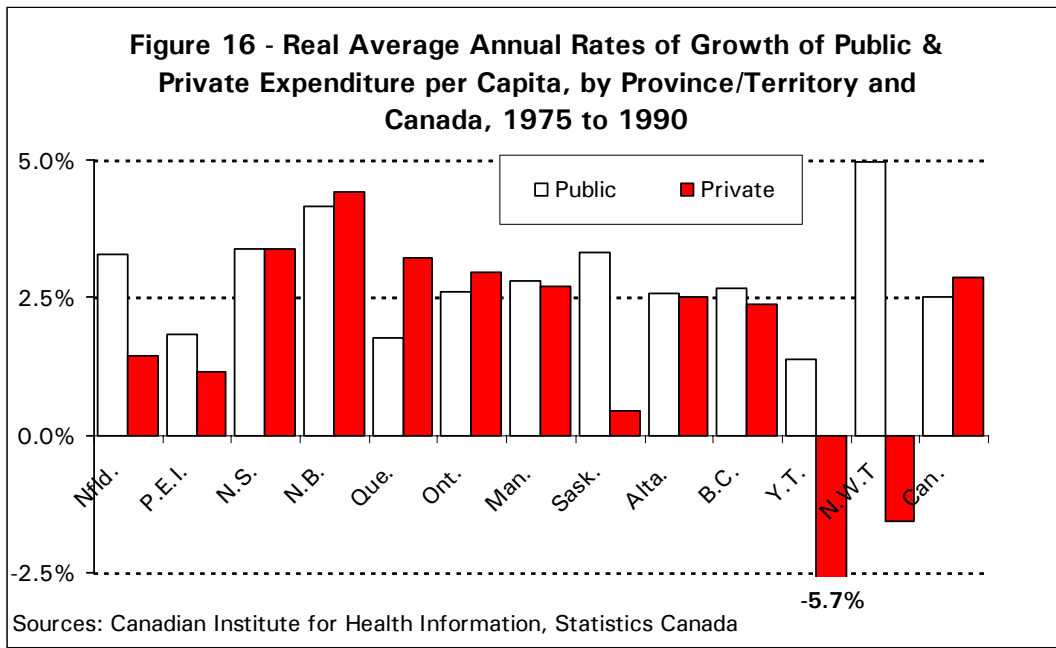

Sources: Canadian Institute for Health Information, Statistics Canada

The provincial trends in Figure 15, which are not adjusted for inflation, show modest growth in most provinces. Ontario private sector expenditure showed the steepest growth curve in the 1990s. By 2000 Alberta is expected to have the highest private sector expenditure per capita at \$1,056. Newfoundland, Prince Edward Island, New Brunswick, Quebec and the territories experienced reductions in private sector expenditure during brief periods of the 1990s. In Quebec the decline was only one year in duration but the Northwest Territories showed a slight downward trend since 1992.

■ **Provinces and Territories**

Provincial rates of increase are compared in Figures 16 and 17. The comparisons focus on growth of health expenditure per capita at constant prices. This is to standardize for both population growth and inflation, which have varied by province during the last two decades.<sup>12</sup> The graphs compare annual growth rates in the public and private sectors during the fifteen years from 1975 to 1990 (Figure 16) and the seven years from 1990 to 1997 (Figure 17). The choice of time periods has some effect on annual average growth rates. In particular, both sectors have experienced quite different rates of growth during specific periods of the 1990s, although the timing of trends has been different, both between sectors and among provinces, as discussed above. Because the 1990s have witnessed policies of health system reform and public expenditure restraint in virtually all jurisdictions, this decade is viewed separately in comparisons of expenditure trends.

<sup>12</sup> The indexes used to measure inflation are the implicit price index for government current expenditure in the public sector and the Consumer Price Index health component in the private sector. Both indexes track prices separately in each province and territory (see Technical Notes).

1975 to 1990

Public and private sector annual growth rates for Canada, and in most provinces, were close between 1975 and 1990. Growth rates between the two sectors were nearly identical in Nova Scotia, Manitoba and Alberta. Relatively large discrepancies between the two sectors were evident in Newfoundland, Quebec, Saskatchewan and the territories.

Public sector growth rates tended to be higher than the Canadian average in three of the Atlantic provinces and Saskatchewan, and lower in Quebec and PEI. The Northwest Territories experienced the highest rates of public sector expenditure growth while Yukon experienced the lowest. The four provinces from Nova Scotia to Ontario experienced the highest private sector growth rates; Saskatchewan had the lowest; the territories experienced decreases in private sector expenditure.

1990 to 1996

The trends in expenditure at constant prices between 1990 and 1996 tend to be closer to trends at market prices than they were in the earlier period, due to relatively low levels of inflation after 1992.

Public sector expenditure per capita at constant prices declined by an average of 0.6% annually between 1990 and 1996. Different trends were followed from east to west, with Newfoundland, Prince Edward Island and New Brunswick showing small increases, and all other jurisdictions, except the Yukon, experiencing decreases. Among the provinces, Alberta experienced the largest decline, followed by Saskatchewan. Even among provinces with positive growth rates, public sector expenditure growth was substantially less than its average during the previous 15 years.

Real private sector expenditure per capita in Canada grew at similar rates during the 1990s as during the previous 15 years (2.5% and 2.9% respectively). Figure 17 shows a wave-like pattern among provinces and territories, cresting in Newfoundland, Manitoba and Yukon. New Brunswick followed by British Columbia and Quebec had the lowest rate of private sector expenditure growth; the Northwest Territories experienced a decline.

*1997 to 2000*

By 1997 real per capita growth of public sector health expenditures was higher than in the previous year in all jurisdictions, except in Prince Edward Island, New Brunswick and Yukon, each of which experienced declines. All jurisdictions experienced growth of between 4% and 13% in 1998 and/or 1999 (according to forecasts). By 2000, it is expected that all jurisdictions will have experienced growth above 2.5% except for British Columbia, which will have experienced a more modest increase of 1.9%. Nova Scotia and Northwest Territories will have experienced declines.

All provinces, except Newfoundland, experienced increases in real private sector expenditures per capita in 1997. New Brunswick, Saskatchewan and Alberta experienced growth rates higher than 10%. By 1998, expenditures declined in New Brunswick, Quebec and Saskatchewan. According to forecasts for 1999 and 2000, all jurisdictions, except Alberta, will have experienced a decline in real per capita private sector expenditure in at least one year since 1998.

## INTERNATIONAL COMPARISONS

According to the Organisation for Economic Cooperation and Development (OECD), Canada ranked third along with France among the Group of Seven (G-7) countries in the ratio of total health expenditure to GDP in 1998, at 9.5%.<sup>13</sup> The United States had the highest ratio at 13.6% followed by Germany (10.6%).

On a per capita<sup>14</sup> basis Canada's health expenditure ranked third among the G-7 countries in 1998, behind the U.S. and Germany. Canada had the second highest GDP per capita after the United States, outpacing Japan for the first time since 1995. Germany and France had the fourth and fifth highest GDP per capita. The relatively high health expenditure per capita of Germany in 1998 combined with its relatively lower GDP per capita produced a health to GDP ratio that was the second highest after the United States.

### ■ Growth of TOTAL Health Expenditure

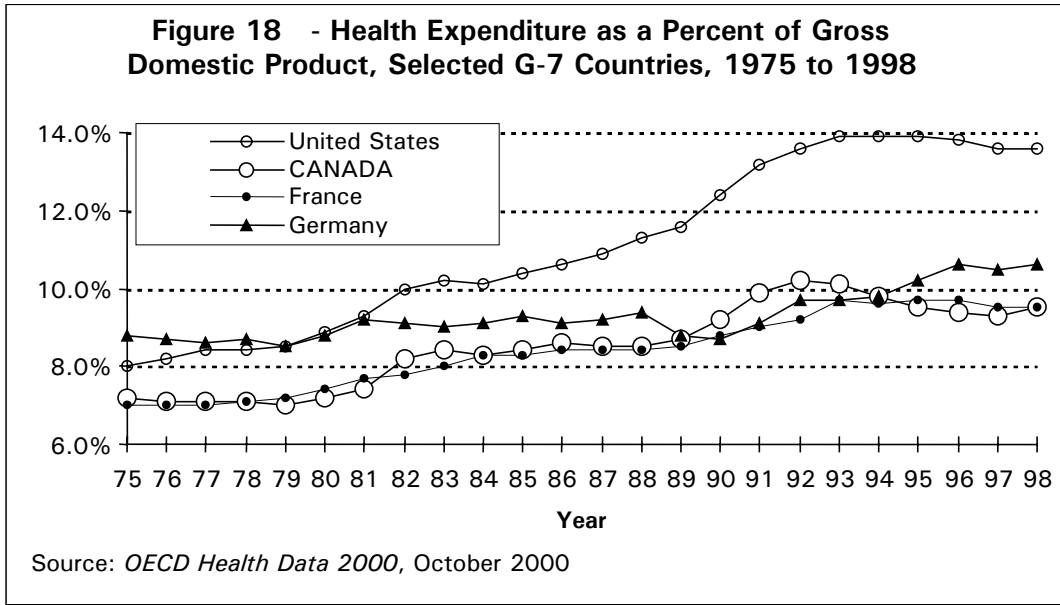

The G-7 countries with the highest ratios of health expenditure to GDP are compared in Figure 18, from 1975 to 1998. France and Germany's health to GDP ratios have been relatively close to Canada's over the last 15 years (particularly in 1989 and 1994). The health to GDP ratios of the remaining G-7 countries—Italy, Japan and the United Kingdom—have always been below those of the four countries represented in Figure 18.

<sup>13</sup> In general, international comparisons should be interpreted with caution as variation exists between countries with regard to reporting, inclusion, and classification of health expenditure.

<sup>14</sup> Total health expenditure per capita and GDP per capita were both converted to US dollars using purchasing power parities (PPPs) for G.D.P., which are designed to eliminate differences in price levels between countries—i.e. PPPs equalize the purchasing power of different currencies.

<sup>15</sup> The OECD GDP figures are standardized for international comparability; consequently, the total health expenditure to GDP ratios reported by the OECD may differ from those reported by the national health accounts of member countries. Specific to Canada, the GDP estimate published by Statistics Canada contains an amount for Financial Intermediation Services Indirectly Measured (FISIM). Statistics Canada removes the FISIM from the GDP estimate provided to the OECD. In addition, there is a time lag between both Statistics Canada's revision of the Canadian GDP and CIHI's revision of national health expenditure data, and their publication in OECD reports.

In comparison to all other OECD countries, the United States has experienced consistently higher rates of growth in the ratio of total health expenditure to GDP through most of the last 20 years. During the late 1970s, Canada's total health expenditure to GDP ratio was relatively constant, but it grew steadily during the 1980s with significant increases during the recessions of the early 1980s and 1990s. The ratio began to decline after it peaked at 10.2% in 1992 as GDP growth outpaced the growth in health spending. By 1998, this had reversed with the growth of health spending increasing faster than GDP, producing a health expenditure to GDP ratio that was higher than it was in 1997.

**Table 6—Total Health Expenditures as a Percent of GDP for Canada and Selected Country Groupings, 1975 to 1998**

| Year | G-7               |         |       |                |       |        |                      |        |           |       |             |

Source: *OECD Health Data 2000*, October 2000 update. Organisation for Economic Cooperation and Development and CREDES, Paris.

The OECD advises caution regarding cross-country comparisons and suggests that users of the data consult the notes provided by individual countries on data sources and methods. The notes on total health expenditure vary in detail by country and it is not always possible to determine precisely what types of expenditures are included or excluded. However, a number of countries indicate clear exclusions from their health expenditure total that are included in the Canadian total. For example, total health expenditure for Germany excludes expenditure on health research, military health and prison health, as well as private households' expenditure on patient transport and nursing care. The United States' total expenditure excludes expenditures on non-structural equipment such as X-ray equipment, computers, and beds. In the United Kingdom, private expenditure on nursing homes is not currently included in the total.

In addition, countries may differ not only in the boundaries between health and other social and economic activities but also in the classification methods and accounting rules that are applied and in the availability of data.

In order to improve the comparability of data across countries, the OECD, in consultation with its member countries has recently developed a common framework for international health accounts.<sup>16</sup> CIHI and agencies responsible for national health accounts in other countries are participating in an interactive process of pilot implementation of the proposed accounts with the OECD Secretariat.

---

<sup>16</sup> The framework was published under the title, *A System of Health Accounts, Version 1.0*, in May 2000 and can be downloaded from the OECD Internet site at <http://www.oecd.org/els/health/sha.htm> .

## Provincial and Territorial Government Health Expenditure by Age and Sex

### INTRODUCTION

As part of a multi-year project to enhance the National Health Expenditure database (NHEX) CIHI is developing health expenditure estimates by age and sex for each province and territory, and for the major categories of service reported in the NHEX database. The 1999 National Health Expenditure Trends report included estimates of provincial and territorial expenditure by sex and nine age groups for hospitals, physicians and drugs. Physicians services estimates were not available for the territories and drug expenditures could be broken down in only seven jurisdictions. This year's report extends the previous estimates to all jurisdictions and covers three years, from 1996 to 1998. Expenditure breakdowns have also been obtained for other institutions and other providers. The categories of service covered by the estimates now account for approximately 85% of provincial and territorial government expenditure. The remaining categories, capital and all other expenditures, have been broken down based on provincial and territorial population distributions. The rationale for using this methodology is discussed at the end of Section 1.<sup>17</sup> A note at the end of this analysis discusses issues involved in obtaining breakdowns for the other public and private sectors of finance.

This analytical focus provides a brief exploration of the analytical potential of available data through the analysis of age-sex utilization curves. The analyses are not intended to be definitive, but instead to suggest approaches that can be developed further in future work. Although data in the 'E' series of data tables in this publication are summarized in nine age groups, the NHEX database accumulates the underlying estimates within twenty age groups. The analyses use all of these age groups in order to obtain the maximum explanatory power.

The population of Canada is aging rapidly by historical standards. A recent analysis by Statistics Canada showed an age pyramid in which the largest concentration of population was in the middle age groups and moving upward.<sup>17</sup> The 'baby-boomers', who were defined as those between 34 and 53 in 1999, represented 31% of the population in 1999. Population projections indicate that the cohort of persons between 35 and 55 will peak at 31.5% of the population in 2000 and then gradually decline over the next twenty-five years to approximately 24% in 2025.<sup>18</sup> The baby-boom cohort will affect the size of the elderly population, which was estimated at 12.4% in 1999, and is projected to grow to just over 20% by 2025 (using the traditional threshold of 65 years to define elderly persons). Future health care costs for an aging population has been a topical issue for a number of years.

---

<sup>17</sup> A detailed explanation of methods and sources used to distribute provincial government health expenditure by age and sex is available in the Technical Notes section of this report.

<sup>18</sup> Statistics Canada Population Projections. Medium growth estimate. CANSIM series 6009.

Section 1 of this analytical focus examines age-sex expenditure patterns for specific categories of expenditure and for all provincial and territorial health expenditures. Projections of future expenditure that can be expected as a result of population growth and aging, all other factors remaining unchanged, are shown in Section 2. Section 3 of the analysis provides estimates of expenditure in each province standardized to the age and sex distribution of Canada.

## 1. PROVINCIAL AND TERRITORIAL GOVERNMENT HEALTH EXPENDITURE BY AGE AND SEX

Provincial government expenditures for hospital and physicians services are shown in Figures 19 to 22. All residents are insured for these plans under provisions of the Canada Health Act. Provincial and territorial governments account for 89% of total expenditure for hospitals and 98% for physicians services. These two categories accounted for two-thirds of provincial and territorial health expenditure in 1998.

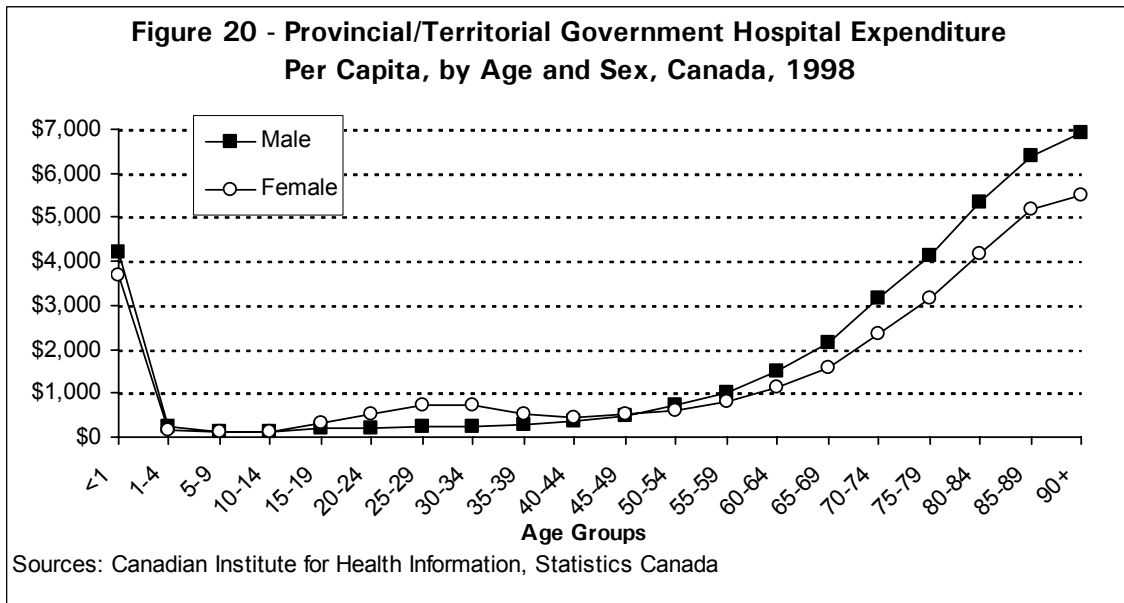

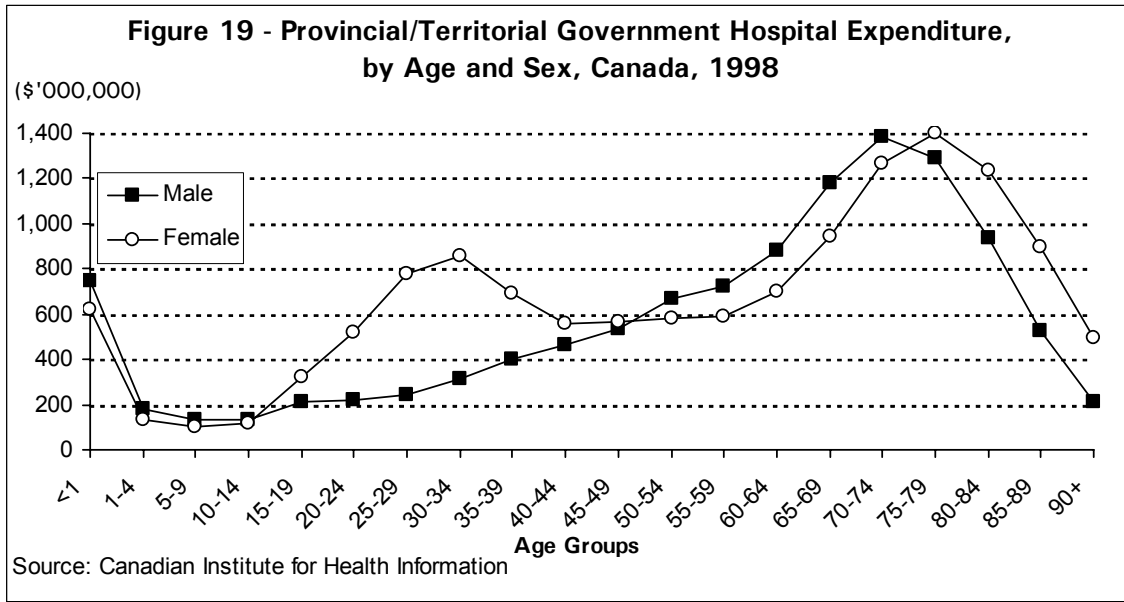

### ■ Hospital Expenditure

Hospital expenditure for children under one year of age was approximately \$1.36 billion in 1998, more than total expenditure for all children and teenagers from ages 1 to 19 (\$1.33 billion) (Figure 19). The hospital expenditure curve begins to increase steeply for females in the 15–19 age group, and continues to increase until it peaks in the 30–34 age group. Expenditure declines during the late 30s and early 40s, and then remains stable until the 60s. Expenditure for males increases slightly in the last five years of the teens, and then stays relatively stable until the 30s. The male expenditure curve crosses the female expenditure curve in the 45–49 age group, and male expenditure exceeds female expenditure in each five-year age group until age 75. Expenditure for both males and females declines sharply after age 75, with expenditure for females higher than expenditure for males in each age group.

Persons 65 and over accounted for over 47% of provincial government hospital expenditure in Canada during 1998. Within this age group most was spent by 70 to 84 year olds (30% of total). Children under one year old accounted for 5%.

Hospital expenditure per capita exhibits a more striking age pattern than total expenditure. Expenditure per capita exceeds \$3,000 for both male and female infants under one year of age, a level not reached again until the 75–79 age group (Figure 20). Expenditure per capita drops to the range of \$100 to \$200 during the childhood and early teenage years. The temporary increase in the female expenditure curve during the 20s and 30s is also noticeable in per capita expenditure, peaking in the age groups from 25 to 35.

Expenditure per capita for both sexes remains under \$1,000 until the 55–59 age group, when it begins to increase rapidly. Hospital expenditure per capita is higher for males than for females throughout the senior age groups. Higher total expenditure for females after age 75 results from higher female populations over 75, which in turn is due to greater longevity.

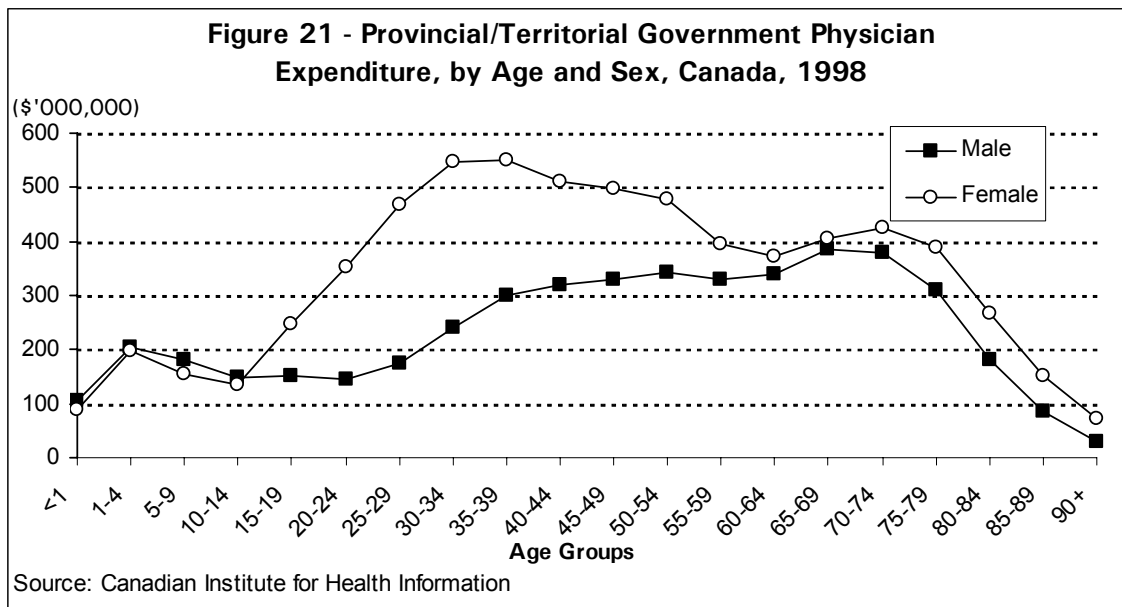

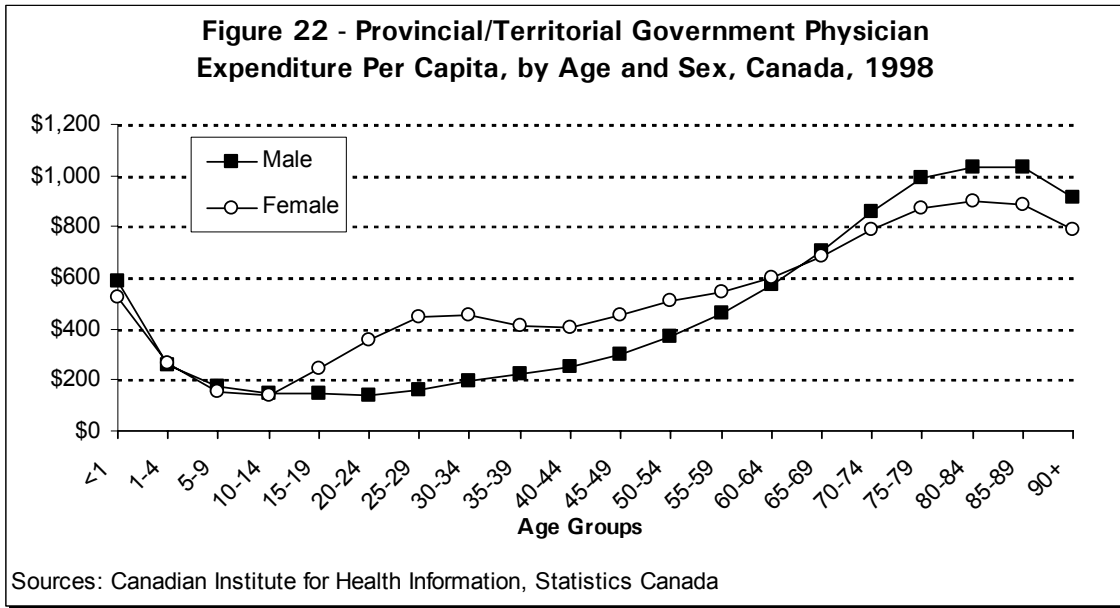

■ **Physicians Services**

Physicians services expenditure for females is slightly less than for males until age 14, and consistently higher thereafter (Figure 21). Expenditure for females is highest between the ages of 25 to 54, with those thirty years accounting for 45% of total expenditure for females. Expenditure for males is highest during the forty-five year period from ages 35 to 79, with those years accounting for 65% of male expenditure.

Expenditure per capita for physicians services follows an age curve that is different from hospital services (Figure 22). Children under one exhibit relatively high expenditure per capita, but the magnitude of differences between expenditure per capita for infants and other children is much less in the case of physicians services than it is in the case of hospitals (expenditure per capita for physicians services is approximately 3.5 times as great for infants as it is for the 5–9 age group, while it is over 35 times as great for hospital services).

Expenditure per capita for females has a bimodal distribution, peaking at ages 25 to 34 and again at ages 75 to 89, then falling off in the oldest age group. Expenditure per capita for males varies in a fairly narrow range of \$130 to \$200 between the ages of 5 and 30, and then increases steadily through the middle and elderly age groups, peaking at over \$1,000 during the 80s, then falling off in the oldest age group. Expenditure per capita for males is consistently below the level for females in the same age group from age 15 to 64 and consistently higher thereafter. As in the case of hospital services, a larger population of women aged 70 and older is the main factor leading to higher total expenditure for physicians’ services by female seniors compared to males.

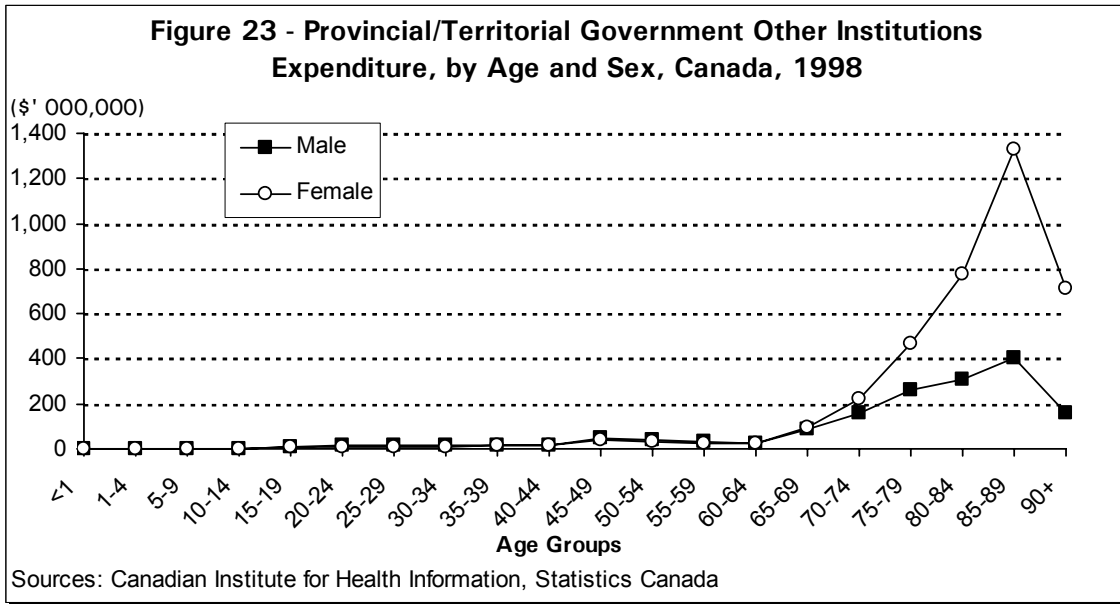

**Other Institutions**

Other institutions (primarily nursing homes) accounted for 10% of provincial and territorial government health expenditure in 1998. Government funding represented approximately two-thirds of total funding for other institutions. Seniors account for over 90% of expenditure in this category; those aged 75 and older account for over 80% (Figure 23). There are pronounced differences between women and men, with women accounting for 70% of total expenditure (Figure 23).

Per capita expenditure increases on a very steep curve in the 80–84 and 85–89 age groups, then tends to stabilize, although total expenditure drops sharply after age 89, reflecting reduced survival after that age (Figure 24). Expenditure per capita for women aged 85 and older is approximately 60% higher than expenditure per capita for men in the same age groups.

■ **Prescribed Drugs<sup>19</sup>**

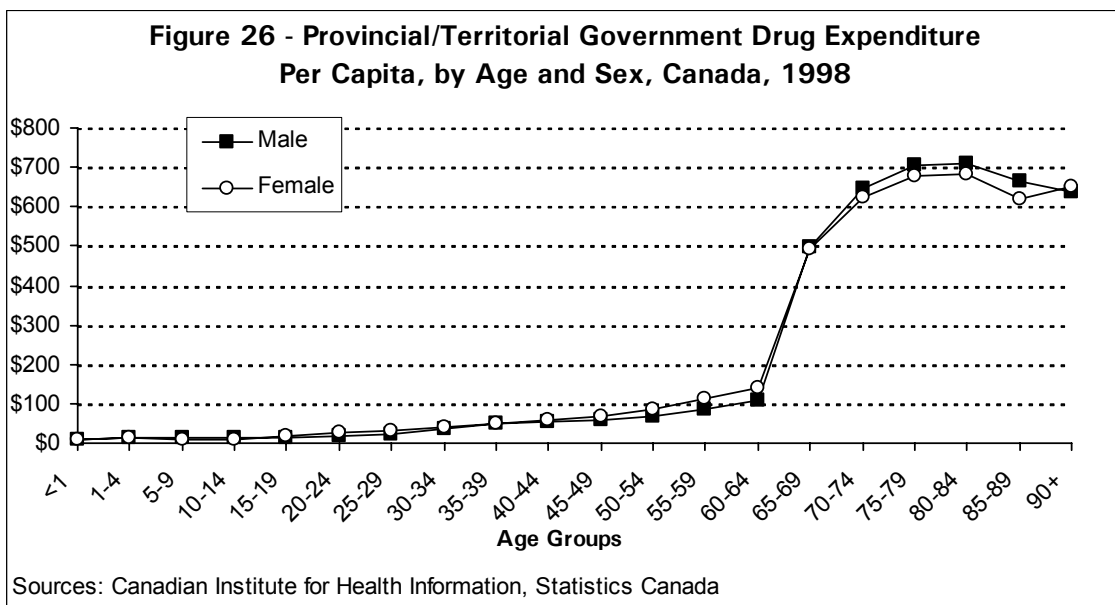

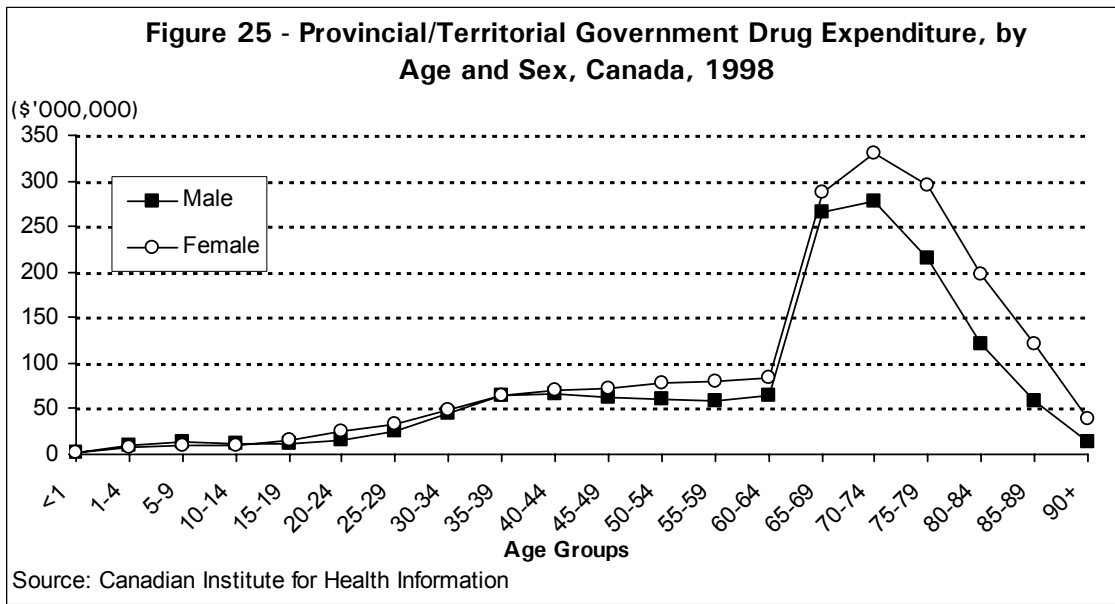

Prescribed drugs accounted for \$3.4 billion in provincial and territorial government expenditure during 1998, representing approximately 6% of their total health expenditure.<sup>20</sup> While governments account for the majority of expenditure for hospitals, physicians and other institutions, approximately 60% of expenditures for prescribed drugs (and all expenditures for non-prescribed drugs and personal health supplies) are funded by the private sector. Most provincial prescription drug plans target the elderly and social

<sup>19</sup> The governments of Newfoundland, Prince Edward Island and the Yukon were unable to supply age-sex distributions for the drug programs that they administer and are therefore excluded from this analysis.

<sup>20</sup> Medications purchased by hospitals are included in the hospital category (see Technical Notes).

services clients, and plans with universal coverage tend to have higher deductibles for younger aged populations. These conditions of coverage combine with higher medical care usage among the elderly to produce expenditure profiles for publicly funded prescription drugs that show expenditure concentrated among the elderly (Figure 25).

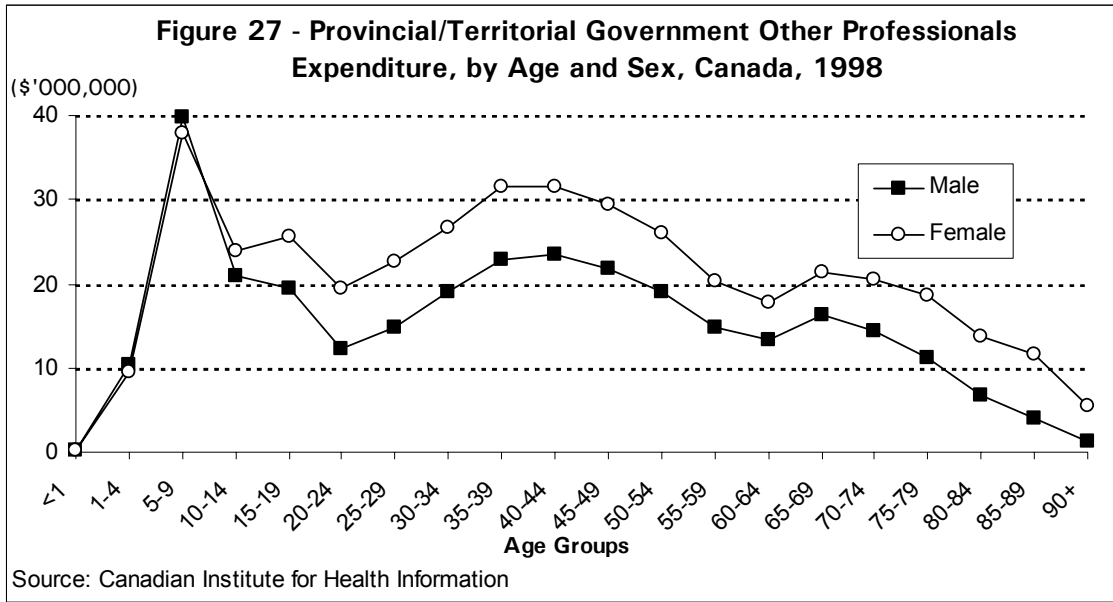

Prescribed drug expenditure per capita peaked in the 75–84 age groups, at approximately \$679 for women and \$705 for men in 1998 (Figure 26). Expenditure per capita drops off in the 85-89 age group, for both sexes and increases slightly for women in the over 90 age group. Expenditure per capita for male and female seniors is similar in almost all age groups, although it is slightly higher for men from age 65 to 89.

■ **Other Professionals<sup>21</sup>**

Other professionals account for less than two percent of provincial and territorial health expenditure. Dentistry, optometry and physiotherapy are the professions most often represented in provincial plans. Provincial/territorial coverage varies and most funding for these professions is provided through the private sector. As a result of differences in coverage, the age-sex distributions of provincial and territorial expenditure for other professions are not comparable in most cases.

Figures 27 and 28 show a spike in expenditure in the 5–9 age group, attributable to dental insurance plans for children in many provinces. Expenditure peaks again during middle age (reflecting coverage for private practice physiotherapy in some provinces). There is another peak at age 65–69 (due in large measure to optometric coverage, which tends to be most prevalent among the elderly). Expenditure per capita is highest in the 5–9 age group and for persons over 65. Expenditure per capita for females exceeds expenditure per capita for males in all age groups except the first three (i.e. 5–9 and younger).

<sup>21</sup> The governments of New Brunswick, Prince Edward Island and the Yukon were unable to supply age-sex distributions for health programs that they administer and for which other health care professionals provide services. These programs are therefore excluded from this analysis.

**■ Total Provincial Spending**

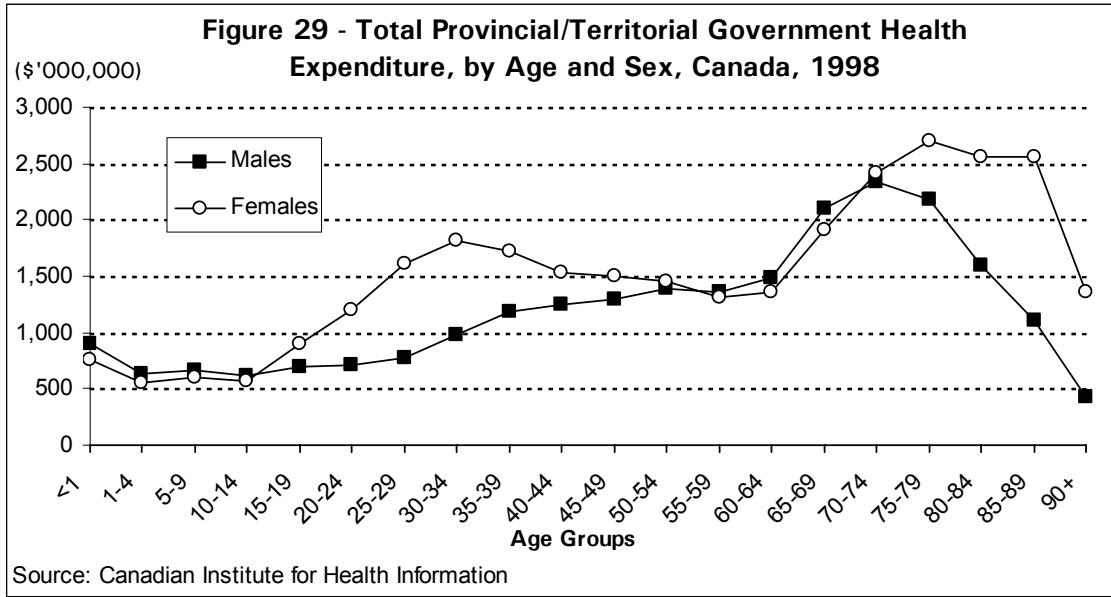

The distributions of total provincial and territorial government expenditures are shown in Figure 29. The influence of hospital and physicians expenditure is obvious in the shape of the curves.

**Capital and Other Health Spending**

The breakdowns of expenditure for the five categories discussed above were obtained from administrative databases of the provinces and territories. The remaining categories were estimated from population distributions in order to obtain the breakdown of total expenditure. The category of capital includes primarily capital expenditure for hospitals, other institutions. These expenditures constitute long-term investments on behalf of the total population and it seems appropriate to assume they have equal value to all persons regardless of age and sex. There are two reasons for this assumption: (i) capital investments in health care institutions typically last for decades and those who do not use institutional services in a given year may use them in the future; (ii) given the uncertainty of illness, the availability of facilities has a value for all who potentially would use them if the need arises.

Public health, health research and prepayment administration account for approximately 60% of the 'all other' category. The first two activities benefit the entire population and it would be difficult to attribute them in different proportions to specific age and sex groups. Prepayment administration expenditures are accounted for mainly by the universal hospital and physicians services plans. The rationale for distributing them according to population rather than utilization lies in the fact that prepayment administration expenses are made up largely of the costs of registration systems for eligible residents, which cover the total population, and claims processing costs. Processing costs would not be expected to vary greatly with the volume of claims processed.

Home care and ambulance account for 34% of the other expenditures category. CIHI is developing an enhanced series of estimates for home care, and breakdowns by age and sex might be available in future. Ambulance services are more problematic. In view of its relatively small share of expenditure, the convention of allocating ambulance expenditure by population distributions is not believed to result in significant error of the total provincial expenditure distribution.

## 2. EFFECTS OF POPULATION AGING ON FUTURE GOVERNMENT HEALTH EXPENDITURES

Future health expenditures by provincial and territorial governments will be determined in large measure by expenditure for hospitals, physicians services and other institutions, which, combined, account for approximately 75% of government health expenditures. Future expenditures for these services, in constant dollars, could be broken down into three determinants: (i) population growth and aging; (ii) trends in per capita utilization and (iii) outcomes of policy initiatives to restructure the health delivery system. The effects of population growth and aging can be estimated by applying age-sex specific expenditure per capita to future population projections. In this section, the effects of population growth and aging are estimated for hospitals, other institutions and for physicians services.

The conventional wisdom holds that future demands for health care by an aging population will strain governments' ability to fund services covered under the Canada Health Act. Canadian studies suggest that the effects of population growth and aging will be manageable, however, within the context of a growing economy. Recent research into the effects of population aging on all government expenditures concluded that government expenditures, in total, can be expected to increase by approximately the same percentage

as population growth and by less than the growth in GDP.<sup>22</sup> A 1987 analysis of the effects of aging on health expenditure using data from Manitoba and British Columbia found that population aging could be expected to contribute approximately one percent per year to per capita utilization of health services. The increase for physicians services expenditure was less, at approximately two-thirds of one percent.<sup>23</sup> Utilization of services per capita was increasing more rapidly for seniors than for other age groups, however, and the analysts suggested that treatment possibilities and professional norms might be the most important factors in future health expenditure.

The effects of population growth and aging for the Canadian population are estimated in Table 7 at five-year intervals from 2000 to 2025. The estimates were obtained by multiplying 1998 expenditure per capita for males and females in each of twenty age groups by the projected population in that age group each year. Population projections are from Statistics Canada's medium growth projection.<sup>24</sup> It is important to note that the estimates do not take into account price inflation, trends in utilization per capita or changes to the way in which services are presently delivered.

<sup>24</sup> Statistics Canada Population Projections. Medium Growth Estimate. CANSIM Series 6009.

Provincial and territorial government expenditures for hospitals, other institutions and physicians services can be expected to increase from \$41.5 billion in 1998 to \$67.1 billion in 2025 in 1998 dollars as a result of population growth and aging. The average annual increase is less than two percent, below the average annual rate of real growth in GDP during the last two decades (2.7%). Annual expenditure growth rates are projected to be 1.9% between 2000 and 2005, decline slightly between 2005 and 2015 to 1.7% and then stabilize at that level.

Expenditure per capita for the three categories is projected to increase at an annual average of 1.1%. Growth rates are projected to be highest for other institutions, followed by hospitals and physicians services. The different growth rates result from the differences in the degree to which expenditure curves change as the population ages, and in particular the percentage differences between expenditure per capita for the elderly and average expenditure per capita (see Figures 20, 22 and 24).

The increase in expenditure per capita as a result of population aging should be considered in context with overall growth rates in provincial and territorial expenditure per capita. Overall per capita growth rates, at constant prices, averaged 2.8% during the 1980s (trends were more variable during the 1990s due to government expenditure restraint). The projections here suggest that aging could explain about 40% of the overall growth rate.

This analysis indicates that expenditure increases resulting from population growth and aging, by themselves, will be stable and relatively modest in the context of historic expenditure growth rates. The combined effects of other factors—such as advances in technology, patient demand and the supply of human and physical resources—have accounted for the major share of historic growth rates. The future effects of these other factors are difficult to determine, especially as some technology advances have the potential to change patterns of treatment, providing cost offsets. Trends in the balance between institutional and home or community care will also have major effects on health expenditure. Lastly, there may be synergistic effects between future treatment patterns and population aging if changes in treatment patterns have disproportionate effects on how a growing population of seniors uses health care. Research into the effects of a number of the determinants of health expenditure has been initiated in recent years and the results will allow more sophisticated projections in future, using different scenarios about changes to individual variables.

### 3. PROVINCIAL GOVERNMENT HEALTH EXPENDITURE STANDARDIZED FOR AGE AND SEX

Provincial and territorial health expenditures per capita are quite similar as a result of universal coverage for medically necessary hospital and physicians services under the Canada Health Act. The 13 jurisdictions have different population age and sex profiles, however, which could lead to systematic differences in total expenditure, even if per capita expenditure were virtually the same for each age and sex group. Standardizing expenditure to a common population distribution provides a means to measure differences that result from utilization and prices.

Table 8 and Figures 30 and 31 show provincial and territorial per capita expenditure for hospital and physicians services in 1998. The data show both actual and standardized expenditure for each category. Standardized expenditures were calculated by multiplying the male and female population of Canada in each of 20 age groups by the expenditure per capita for each age group in each province and territory. Percentage differences between actual and standardized expenditure for hospitals tend to be most pronounced in Manitoba, Saskatchewan, Alberta and the territories. Newfoundland, Alberta and the territories have lower than average percentages of their populations over 65, which accounts for their increases in per capita expenditure when standardized to the national population. Quebec and Ontario show little difference between actual and standardized expenditure, due to their large shares of the total population. Other provinces show lower expenditure per capita when data are standardized, with the declines ranging from approximately two to four percent, except in Manitoba and Saskatchewan where standardized expenditure per capita is over six percent less than actual expenditure per capita.

Sources: Canadian Institute for Health Information, Statistics Canada

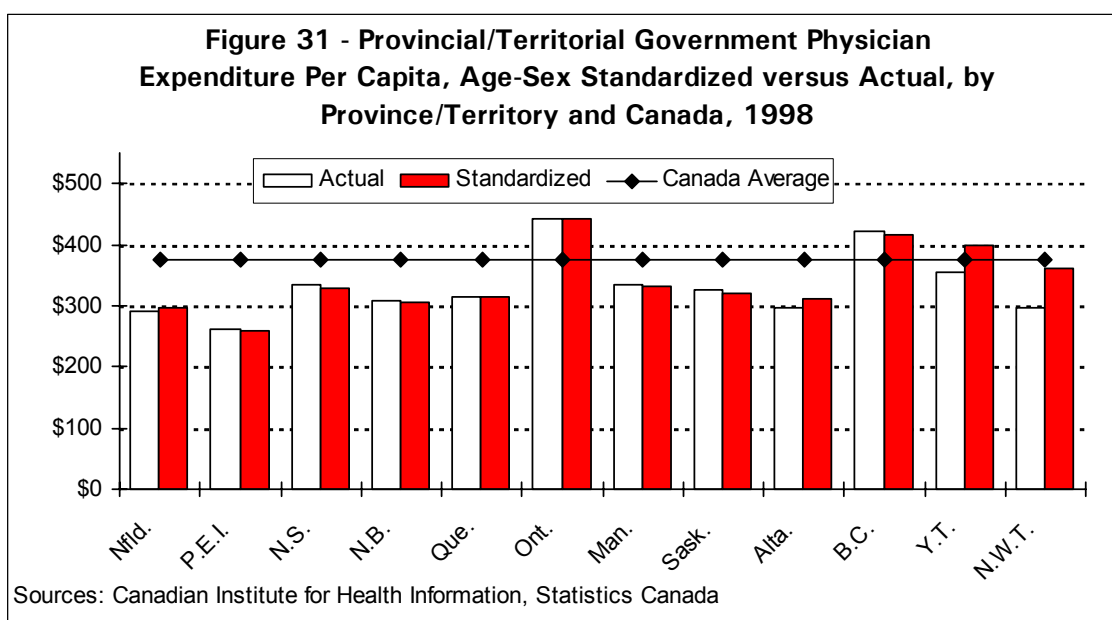

Differences between actual and standardized data tend to be less in the case of physicians' services than with hospital services. This is due to the fact that variations in physicians expenditure per capita are not as great across age groups as variations in hospital expenditure per capita. Alberta and the territories show differences of greater than five percent while other provinces show differences of two percent or less.

Standardization of hospital expenditure tends to bring most provinces' expenditure per capita slightly closer to the Canadian average.<sup>25</sup> Six of the ten provinces are within a range of approximately \$745 to \$900, equivalent to ten percentage points, plus or minus, of the national average. Newfoundland and Saskatchewan diverge somewhat further from the average. Saskatchewan has the lowest expenditure per capita for hospitals (but above average spending for other institutions). Standardized expenditures per capita in the territories are well above the national average, with the Northwest Territories almost four times higher than the national average. The high standardized expenditure reflects younger than average populations and the relatively high costs of providing hospital care to widely dispersed rural populations.

In the case of physicians services, Ontario, British Columbia and Yukon are above the national average in standardized expenditure per capita. Differences between the provinces in physicians services expenditure per capita reflect differences in fee levels as well as utilization.

<sup>25</sup> The Canadian average referred to in these comments is total provincial and territorial expenditure (for the categories being discussed) divided by the national population; it is not a simple average of per capita expenditure for each jurisdiction.

### ■ Combined Institutional and Physicians Services

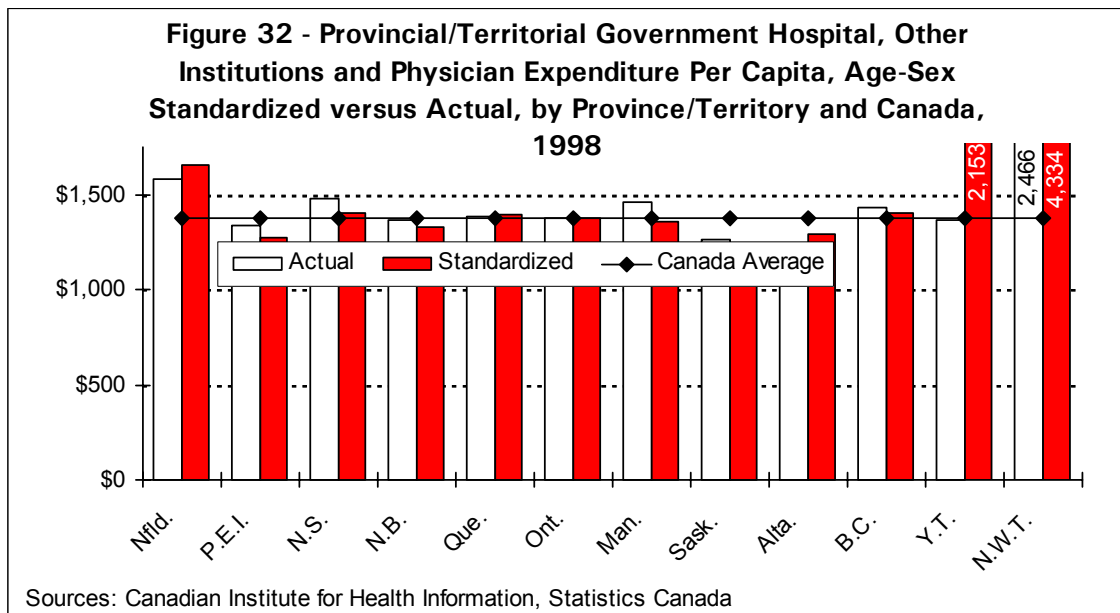

Combined expenditure per capita for hospitals, other institutions and physicians services, standardized to the age-sex composition of the population of Canada in 1998, are compared in Table 9 and Figure 32. These three categories, as noted earlier, represent three-quarters of provincial and territorial expenditure. Other institutions have the potential to substitute for hospital services, at least for the elderly. Provinces designate institutions as hospitals or other institutions and in the case of extended or psychiatric care, the designation may differ between provinces. Comparisons of standardized combined expenditure for these three categories provide an indication of differences in provincial expenditure for services that are both universal and predominantly funded by the public sector.

Average expenditure per capita for Canada for these three categories was \$1,373. Eight provinces had standardized expenditure per capita in the range of \$1,271 to \$1,483, within eight percent of the national average (Newfoundland, Saskatchewan and the territories were the exceptions). These data indicate that most provinces are close together in their expenditure for institutional and physicians services. Age-sex standardization tends to bring most provinces closer to the national average. Standardization increases the variation from average for the four jurisdictions that show the largest departure from average. This finding is understandable in the case of the territories and it indicates that the cost of providing health care is even greater than indicated by non-standardized data. The reasons for higher variations from national expenditure levels are not clear in the case of Newfoundland and Saskatchewan.

■ **Total Provincial Expenditure**

Total provincial expenditure per capita, standardized for age and sex, is compared in Table 10 and Figure 33. Distributions that were unavailable for specific categories were estimated for these comparisons.

With the exception of Newfoundland and Saskatchewan, standardized provincial expenditure per capita tends to follow a gradient from east to west. The territories have the highest expenditure per capita; Newfoundland and British Columbia have the highest expenditure among the provinces. Saskatchewan expenditure moves to within five percent of the national average, suggesting that other forms of health care may be substituting for institutional care in that province. This substitution also appears to be important in Alberta, which moves above the national average in the standardized comparisons.

**Table 10—Total Provincial/Territorial Government Health Expenditure Per Capita Standardized for Age and Sex, by Province/Territory and Canada, 1998**

|        | Total Provincial/Territorial Gov't Health Expenditure |                   |

■ **Approach to Other Public Sectors and Private Sector Expenditure**

Estimates of expenditure by age and sex for other public sectors are more problematic to obtain than estimates for provincial and territorial expenditure. Federal direct expenditures make up a relatively small proportion of total expenditures, but are targeted to a broad spectrum of population groups, including the armed forces, RCMP, veterans and native peoples. No breakdowns are available at this time, and estimation techniques will need to be considered with a view to developing a methodology that will be acceptable to most stakeholders. Estimation techniques will also be considered for municipal government expenditures.

Consultations will be held with Workers Compensation boards over the next year to determine if their administrative databases will support a breakdown of payments by age and sex of beneficiaries.

The private sector consists of expenditure by insurers, out-of-pocket payments and institutional revenues that do not flow from patient care. Discussions are underway with health insurance data sources to determine if expenditure by client age and sex is available. Out-of-pocket expenditures are obtained from Statistics Canada’s Survey of Household Spending. The survey records the age and sex of family members, but it does not attribute specific types of expenditure by age and sex. The survey covers all household spending and many commodities, such as food and shelter, are purchased for the family unit rather than individuals.

The most promising potential to develop greater detail about out-of-pocket expenditures would be to add questions on expenditure to Statistics Canada’s Community Health Survey or another survey conducted on a periodic basis. This possibility is being explored. The development of private sector estimates is a work in progress at this stage. Progress reports will be provided in future publications.

## CONCLUSION

This analysis provides a brief insight into only one set of factors that affect health expenditures—the provincial variation in age and sex over three recent years. While it answers some questions such as what are the age and sex distributions of major categories of expenditure and what are provincial and territorial per capita expenditures adjusted for different age and sex populations, the analysis illustrates that more needs to be done. Additional research needs to be undertaken into other factors that impact health expenditures including other demographic variables, the impact of advances in technology, patient demand and the supply of human and physical resources to name only a few. Moreover, the challenge becomes how to incorporate these factors into future projections of health expenditure.

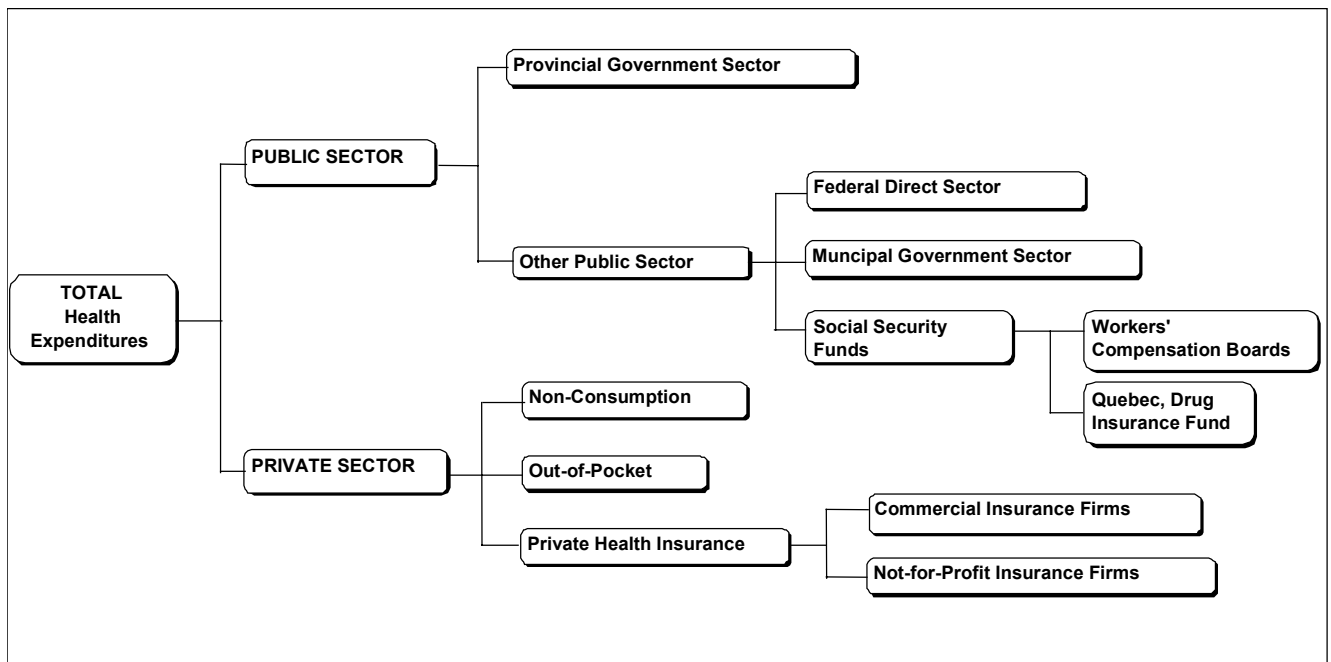

CIHI will continue to monitor the age and sex distribution of health expenditures over time and improve the methodologies, as new data sources become available. Furthermore, the Institute will work with other researchers and stakeholders to contribute to the analysis of other factors that affect health expenditures in Canada.

# Definitions

**Health expenditure**—includes any type of expenditure for which the primary objective is to improve or prevent the deterioration of health status.

This definition allows economic activities to be measured according to primary purpose and secondary effects. Activities that are undertaken with the direct purpose of improving or maintaining health are included. Other activities are not included, even though they may impact health. For example, housing and income support policies have social welfare goals as their primary purpose and are not considered to be health expenditures, yet they are recognized as powerful factors in determining population health.

**Figure 34—Composition of Total Health Expenditures, by Source of Finance**

## SOURCE OF FINANCE (SECTORS)

National health expenditures are reported based on the principle of *responsibility for payment* rather than on the source of the funds. It is for this reason, for example, that federal health transfers to the provinces are included in the provincial government sector since it is the responsibility of provincial governments to expend federal transfers on health services. The exception to this principle is that provincial government health transfers to municipal governments are included in the provincial government sector.

**Public Sector**—includes health care spending by governments and government agencies. It is sub-divided into four levels, as described below:

1. The Provincial Government Sector includes health spending from provincial/territorial government funds, federal health transfers to the provinces/territories, and provincial government health transfers to municipal governments.
2. The Federal Direct Sector refers to direct health care spending by the federal government in relation to health care services for special groups such as Aboriginals, the Armed Forces and veterans, as well as expenditures for health research, health promotion and health protection. Federal Direct health expenditure does not include federal health transfers to the provinces.
3. The Municipal Government Sector expenditure includes health care spending by municipal governments for institutional services; public health; capital construction and equipment; and, dental services provided by municipalities in the provinces of Nova Scotia, Manitoba and British Columbia. Designated funds transferred by provincial governments for health purposes are not included in the municipal sector, but are included with provincial government expenditure.
4. Social Security Funds are social insurance programs that are imposed and controlled by a government authority. They generally involve compulsory contributions by employees, employers or both, and the government authority determines the terms on which benefits are paid to recipients. Social security funds are distinguished from other social insurance programs, the terms of which are determined by mutual agreement between individual employers and their employees. In Canada, social security funds include the health care spending by workers' compensation boards and the drug insurance fund component of the Quebec Ministry of Health and Social Services drug subsidy program.

Health spending by Workers' Compensation Boards (WCB) includes what is commonly referred to by the provincial boards as medical aid. Non-health related items often reported by the Workers' Compensation Boards as medical aid expenditure such as funeral expenses, travel, clothing etc., are removed.

On January 1, 1997 the government of Quebec introduced a drug program that covered residents of the province, who were not otherwise covered by the provincial program or by private health insurance generally offered through employment. Drug claims for these participants of the new plan are paid from the Drug Insurance Fund. This component of the Quebec drug program is self-funded (i.e. it is funded through the compulsory payment of premiums and not by the provincial government of Quebec).

**Private Sector**—includes out-of-pocket expenditures made by individuals for health care goods and services; the health insurance claims paid by commercial and not-for-profit insurance firms, as well as the cost of administering those claims; non-patient revenues received by health care institutions such as donations and investment income; private spending on health-related capital construction and equipment; and, health research funded by private sources.

**Data Quality**—most private sector expenditures are estimated from survey data. Prior to 1996, the Family Expenditure Survey by Statistics Canada<sup>26</sup>, an important source of private sector data, was not carried out annually; therefore, trend data have been imputed for years between surveys. Private sector data were revised following a methodology review in the early 1990s. The revised private sector data incorporated information estimated directly from new sources for 1988 and subsequent years. Prior years were estimated using trend data. As a result, readers should use caution when using the private sector expenditure data for small provinces and for years prior to 1988.

## USE OF FUNDS (CATEGORIES)

**Hospitals**—are institutions where patients are accommodated on the basis of medical need and are provided with continuing medical care and supporting diagnostic and therapeutic services. Hospitals are licensed or approved as hospitals by a provincial/territorial government, or are operated by the Government of Canada and include those providing acute care, extended and chronic care, rehabilitation and convalescent care, psychiatric care, as well as nursing stations or outpost hospitals.

**Other Institutions**—include residential care types of facilities (for the chronically ill or disabled, who reside at the institution more or less permanently) and which are approved, funded or licensed by provincial or territorial departments of health and/or social services. Residential care facilities include homes for the aged (including nursing homes), facilities for persons with physical disabilities, developmental delays, psychiatric disabilities, alcohol and drug problems, and facilities for emotionally disturbed children. Facilities solely of a custodial or domiciliary nature and facilities for transients or delinquents are excluded.

**Physicians**—expenditures include primarily professional fees paid by provincial/territorial medical care insurance plans to physicians in private practice. Fees for services rendered in hospitals are included when paid directly to physicians by the plans. Also included are other forms of professional incomes (salaries, sessional, capitation).

The physician expenditure category does not include the remuneration of physicians on the payrolls of hospitals or public sector health agencies; these are included in the appropriate category, e.g. hospitals or other health spending.

**Other Professionals**—services, at the aggregate level represent expenditures for the services of privately practicing dentists, denturists, chiropractors, massage therapists, orthoptists, osteopaths, physiotherapists, podiatrists, psychologists, private duty nurses, and naturopaths. Discrete identification of many of the professions included under other professional services is often possible only when they are reported by provincial medical care insurance plans.

This category has been disaggregated at the Canada level in the Data Tables to provide information on the following sub-categories:

*Dental Services*—expenditures for professional fees of dentists (includes dental assistants and hygienists) and denturists, as well as the cost of dental prostheses, including false teeth and laboratory charges for crowns and other dental appliances.

*Vision Care Services*—expenditures for the professional services of optometrists and dispensing opticians, as well as expenditures for eyeglasses and contact lenses.

*Other*—expenditures for chiropractors, massage therapists, orthoptists, osteopaths, physiotherapists, podiatrists, psychologists, private duty nurses, and naturopaths.

**Drugs**—at the aggregate level, include expenditures on prescribed drugs and non-prescribed products purchased in retail stores. This category has been disaggregated at the Canada level in the Data Tables to provide information on the following sub-categories:

*Prescribed Drugs*—substances sold under the Food and Drug Act which require a prescription.

*Non-prescribed Drugs*—include two sub-components; Over-the-Counter drugs; and, Personal Health Supplies.

- *Over-the-Counter Drugs*—therapeutic drug products not requiring a prescription.
- *Personal Health Supplies*—include items used primarily to promote or maintain health, e.g. oral hygiene products, diagnostic items such as diabetic test strips and medical items such as incontinence products.

The drug category does not include drugs dispensed in hospitals and generally in other institutions. These are included with the category of hospitals or other institutions.

**Capital**—includes expenditures on construction, machinery and equipment of hospitals, clinics, first-aid stations, and residential care facilities. (See also Technical Notes.)

**Other Health Spending**—at the aggregate level includes expenditures on home care, medical transportation (ambulances), hearing aids, other appliances and prostheses, public health, prepayment administration, health research and miscellaneous health care. This category has been disaggregated at the Canada level in the Data Tables to provide information on the following sub-categories:

*Prepayment Administration*—expenditures related to the cost of providing health insurance programs by either government or private health insurance firms.

*Public Health*—expenditures for items such as measures to prevent the spread of communicable disease, food and drug safety, health inspections, health promotion activities, community mental health programs, public health nursing and all costs for the infrastructure to operate health departments.

*Health Research*—expenditures for research activities designed to further knowledge of the determinants of health, health status or methods of providing health care, evaluation of health care delivery or of public health programs. The category does not include research carried out by hospitals or drug companies in the course of product development. These amounts would be included with the hospital or drug categories respectively.

*Other*—expenditures for items such as home care, medical transportation (ambulances), hearing aids, other appliances, training of health workers, voluntary health associations, and occupational health to promote and enhance health and safety at the workplace.

The definition of home care that is currently in use in the National Health Expenditure Database is based on the definition used by the OECD, under which only the health professional component of home care is intended to be included. The portion that is commonly referred to as home support is considered to be a social service expenditure rather than a health expenditure and is excluded when it can be identified. A project is underway by CIHI to investigate the feasibility of developing a set of estimates that identify both the health professional and the home support components of home care.

## OTHER TERMS

**Federal Transfers**—refer to the total of the various federal-provincial-territorial health financing arrangements, which include at various times the Canada Health and Social Transfer (CHST); the Canada Assistance Plan (CAP); Established Programs Financing (EPF); the Health Resource Fund which supported provincial capital health expenditures from the mid 1970s to the early 1980s; and, transfers by the Department of Indian and Northern Affairs to the territorial governments for the medical care and hospital insurance plans on behalf of Aboriginal peoples.

*Canada Health and Social Transfer (CHST)*—on April 1, 1996 the CHST replaced federal transfers for social assistance under the Canada Assistance Plan (CAP), and for health and post secondary education under Established Program Financing (EPF). The CHST is a block fund provided in the form of both cash transfers and tax point transfers to all provinces/territories in support of health, post-secondary education, social assistance and social service programs. Provinces may allocate the CHST to health and other social programs according to their particular priorities while upholding the criteria and conditions of the *Canada Health Act*. In 1996/1997 CHST transfers were allocated among the provinces and territories in the same proportions as provincial entitlements under the combined EPF and CAP transfers in 1995/96.<sup>27</sup>

*Canada Assistance Plan (CAP)*—introduced in 1966 by the federal government to share in eligible costs incurred by the provinces and territories in providing social assistance and welfare services to persons in need or persons likely to become in need if these services were not provided. The 1994 budget limited 1995/1996 CAP transfers for all provinces/territories at 1994/1995 levels.<sup>28</sup>

*Established Programs Financing (EPF)*—prior to the introduction of the CHST the federal government contributed to the operation of provincial/territorial health insurance plans according to the provisions of the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977 (EPF Act). Under the Act, provinces and territories were entitled to equal per capita federal health contribution increases according to a fixed formula (escalator). Health contributions to the provinces consisted of both cash and an equalized tax

<sup>28</sup> Human Resources Development Canada, Cost Shared Programs, Provincial Entitlements under the Canada Assistance Plan, February, 1996, (unpublished).

transfer. The February 26, 1991 federal budget extended a freeze at 1989/1990 levels to 1994/1995. Legislation later provided for EPF entitlements to grow in 1995/1996 in accordance with the escalator, less three percentage points.

**Gross Domestic Product (GDP)**<sup>29</sup>—is the unduplicated value of production originating within the boundaries of Canada, regardless of the ownership of the factors of production. Gross Domestic Product can be valued either at factor cost or at market prices. In this publication GDP is valued at market prices and is expressed in terms of the prices actually paid by the purchaser. It includes all indirect taxes, such as sales and excise taxes, customs duties and property taxes and also reflects the impact of subsidy payments.

**Implicit Price Indices**—see Technical Notes, Calculation of Constant Dollars.

**Purchasing Power Parity (PPP)**<sup>30</sup>—Purchasing Power Parities (PPPs) are the rates of currency conversion that equalize the purchasing power of different currencies. In other words, PPPs are the rates of currency conversion which are designed to eliminate differences in price levels between countries.

# Technical Notes

---

Data contained in the national health expenditure database are estimates. The data are collected from diverse sources and include varying classes of financial information. The data are collected and classified according to methods established by a Review Committee. CIHI analysts and external experts continue to improve the comprehensiveness, accuracy and currency of the data, in order to provide the most complete and objective estimates possible. Notwithstanding, national health expenditure data are estimates and should be used accordingly.

The following notes briefly describe some of the major technical points associated with the compilation of the health expenditure estimates. Additional information can be obtained by contacting the National Health Expenditure section by phone (613) 241-7860, by fax (613) 241-8120, or by e-mail [nhex@cihi.ca](mailto:nhex@cihi.ca).

## H I E R A R C H Y O F C L A S S I F I C A T I O N

National health expenditures in Canada are based on a system of classification that is consistent with international standards developed by the Organisation for Economic Cooperation and Development (OECD) for reporting of health expenditures.<sup>31</sup>

National health expenditures are grouped within the broad categories of Personal Health Care or Other Expenditures:

**Personal health care** consists of expenditure for health goods and services used by individuals.

**Other health expenses** consist of expenditures on behalf of society, such as public health; expenditures made as investments for purposes of future consumption, such as capital expenditures; the administrative expenses of planning and managing the health care system; and research.

---

<sup>31</sup> Statistics Canada (Public Institutions Division) publishes estimates of government health expenditure as part of its comprehensive reporting system of all government expenditures, the Financial Management System (FMS). The FMS public sector health spending estimates are lower than those reported by CIHI because different classification methods are applied and a narrower definition of health expenditure is used in the FMS.

Personal health expenditures are classified within categories that describe the type of health care used. Certain categories overlap. The hierarchy of classification that is used to allocate overlapping categories of expenditure is:

**Institutional setting**—health care services consumed in hospitals or other institutions are allocated to the institutional category if the institution purchases the services on behalf of its patients. For example, physicians services and drugs paid through hospital budgets are classified as hospital expenditures. This allocates expenditure to the supplier actually paid by patients or their agents in the form of government or insurance companies. It also reflects data availability.

**Self employed provider of service**—for example, all expenses of physicians' practices are considered to be expenditures for physicians services, even though some of these expenses would be for employment of other health professionals, drugs or personal health supplies.

**Type of good and service**—drugs, personal health supplies and appliances are examples.

An exception to the hierarchy of classification is eye care, in which optometrists services, eyeglasses and contact lenses sold by optometrists and eyeglasses sold by opticians are combined as one category, vision care services.

The definitions and methods used in the preparation of this document are for the most part based on those adopted in 1994 by the National Health Expenditure Methodology Review Committee. This committee included representation from Health Canada, Statistics Canada, Ministère de la santé et des services sociaux du Québec, the Canadian Medical Association and the Canadian Healthcare Association. Some of the recommendations for change made during that process are still under development.

## GENERAL METHODS

The following is intended as a general overview of the methods applied to calculate estimates of health expenditure in Canada. More detailed information can be obtained by contacting the National Health Expenditure section by phone (613) 241-7860, by fax (613) 241-8120, or by e-mail [nhex@cihi.ca](mailto:nhex@cihi.ca).

### ■ Provincial Government

Data are extracted annually from provincial/territorial government Public Accounts. Programs and/or program items are classified into health expenditure categories according to accepted and standardized methods and definitions used in estimating national health expenditure. Data from the Public Accounts are supplemented with information from provincial/territorial Government Department Annual Reports and Annual Statistical Reports when available, as well as, information provided by provincial/territorial government department officials. Total provincial government health spending figures include spending for health services reported by the provincial/territorial ministry

responsible for health as well as for other departments that report spending on health according to National Health Accounts definitions.

Adjustments for regional health authority and/or hospital deficits or surpluses are not made in the National Health Expenditure Database unless the provincial government assumes them. Once assumed by the provincial government they are allocated to the years when the regional health authority and/or hospitals accumulated them.

CIHI's 1998/1999 estimates of provincial government health expenditure were submitted to provincial/territorial departments of health for review.

Provincial government figures identified as forecasts are based on the growth rates of major programs reported in provincial/territorial government Main Estimates and Budgets.

## ■ Private Sector

Private sector data were revised in 1995 following a methodology review that began in the early 1990s. Private sector data under the revised methodology incorporated information estimated directly from new sources for 1988 and subsequent years. Expenditure amounts prior to 1988 were estimated using trend data. As a result, readers should exercise caution when using the private sector expenditure data for small provinces and for years prior to 1988.

**Health Insurance** claims by category and premiums are collected from 12 not-for-profit insurance companies and the Canadian Life and Health Insurance Association, which survey their member companies. The difference between claims and premiums is allocated to the category of prepayment administration, which relates to the cost of providing health insurance programs. Currently, health care spending data by insurance companies providing casualty insurance is not included.

**Out-of-Pocket** health expenditures are based on purchased data from the Survey of Household Spending (SHS), formerly the Family Expenditure Survey, fielded by Statistics Canada. Only category data from section "P" of the survey on Direct Costs for Health Care are used, however, the SHS category of "Other Medicines, Drugs and Pharmaceuticals" i.e. not prescribed by a doctor; and, "Hospital Care" are replaced with data from other sources as described below. National health expenditure estimates are equal to the average expenditure per household for each category multiplied by the estimated number of households.

The SHS is an annual survey, which began in 1996. Prior to 1996, full surveys that included both urban and rural areas were carried out in 1986 and 1992. In 1990 a survey was conducted that included only metropolitan areas. In years when complete surveys are carried out, data are available for the ten provinces and for 17 urban centres. The urban centres include Yellowknife and Whitehorse, which are used to derive estimates of expenditure in the territories. Metropolitan expenditures per household tend to be somewhat higher than provincial estimates. All relevant categories were updated in complete survey years. In years when only urban surveys were carried out, the percentage changes in urban expenditures within each province or territory were used to update category estimates from complete survey years.

Between 1992 and 1996 when no surveys were conducted, provincial growth rates of the Statistics Canada variables of personal expenditure on medical care and dental care; drug and drug sundries; and, other health care, were used to impute missing years.

The SHS category of "Other Medicines, Drugs and Pharmaceuticals" i.e. not prescribed by a doctor, is replaced with information purchased from the research company A.C. Nielsen which tracks consumer sales of non-prescribed drugs sold in Canada at retail. Each year, A.C. Nielsen reports retail sales data for two consistent years for 48 plus non-prescribed drug categories. Data are reported by sales channel,<sup>32</sup> total dollar sales volume; and, by regional sales distribution that includes nine provinces. Newfoundland and the territories are not included. The data is processed by classifying the non-prescribed drug categories as either over-the-counter drugs or personal health supplies. Regional sales amounts are separated into nine provinces and estimates for Newfoundland and the territories are calculated, using provincial distributions of Direct Costs for Health Care from the SHS. Lastly, appropriate provincial and federal sales taxes are incorporated into the estimates.

The SHS category of Hospital Care is not used; instead the out-of-pocket component of hospital care is calculated based on income from patient services from Statistics Canada's Annual Return of Health Care Facilities (HS-2) and CIHI's Annual Hospital Survey (AHS), less hospital care from insurance sources.

Private sector estimates of other institutions are derived from data from Statistics Canada's Residential Care Facilities Survey (RCF). Data used from the survey include income to facilities from co-insurance or self-pay of residents; differential for preferred accommodation; and, sundry earnings. The last year that data was publicly available was from the 1993/1994 survey. Data in this report is also based on preliminary figures provided in the 1994/1995, 1996/1997 and 1997/1998 surveys. Missing data are based on estimates by Statistics Canada and CIHI.

The **Non-Consumption** component of the private sector includes non-patient revenue to hospitals including ancillary operations, donations, investment income etc. This data is derived from Statistics Canada's and CIHI's Hospital Surveys.

The non-consumption portion of the private sector also includes expenditures for biomedical and health care research of Canadian faculties of medicine derived from Medical Education Statistics published by the Association of Canadian Medical Colleges. Included are amounts for research funded by national and provincial not-for-profit foundations such as the Heart and Stroke Foundation of Canada, the National Cancer Institute of Canada, the Canadian Cancer Society, to name only a few. In addition, funding from local sources, internal university sources, university and unaffiliated hospitals, and foreign sources are also included. The sum of these amounts is provincially distributed according to the reported distribution of total amounts spent on research by the various faculties of medicine across the country.

---

<sup>32</sup> As a general rule Statistics Canada definitions govern the classification of stores by class of trade. Sales channels include Drug Stores; Food Stores with Pharmacies; Grocery Banners; Mass Merchandiser and Warehouse Clubs, which are estimated from A.C. Nielsen's household panel data.

Capital expenditure in the private sector is also included as a non-consumption component category. Additional information on the calculation of capital can be found in the Technical Notes in the Calculation Methods section under Capital Expenditure and in the Forecasting Method section.

### ■ Federal Direct

Data on Federal Direct health care spending is derived from information provided by federal government organizations supplemented with information from the National Public Accounts. Federal government health care spending is generally provided according to the province in which the expenditure was made. Where national data is provided it is provincially distributed by the appropriate population.

### ■ Municipal Government

Municipal Government health care spending is based on information provided by the Public Institutions Division of Statistics Canada. This data is supplemented with an estimate of spending by municipal governments on other institutions, which is based on information from Statistics Canada's Residential Care Facilities Survey.

### ■ Social Security Funds

Data are derived from special tabulations from each provincial and territorial Workers' Compensation Board of their medical aid expenditures. Income replacement and occupational rehabilitation is not included. Items included as medical aid that do not meet the National Health Expenditure definition of health expenditures such as funeral expenses, clothing expenses, hotel accommodation, and non-medical transportation are excluded.

The Workers' Compensation Boards data is supplemented in Quebec after 1996 with the portion of the Régie de l'assurance maladie du Québec's drug program that is not funded by the ministry of health and social services. See the definition of Social Security Funds in the Definitions section of this report for additional information.

## C A L C U L A T I O N M E T H O D S

### ■ Calculation of Average Annual Rate of Growth

The Average Annual Rate of Growth is the constant annual rate necessary for a value at the beginning of a period to grow to a value at the end of a period over the number of compounding years in the period. The formula used to calculate the average annual rate of growth is:

$$= e^{(\ln(\text{value at end of period}) - \ln(\text{value at beginning of period}))/T}$$

Where the constant e equals 2.718, and is the base of the natural logarithm, and T equals the number of years in the period.

## ■ Calculation of Calendar Year

Some information sources provide data in fiscal years. Calendar year data were derived by adding  $\frac{3}{4}$  of one fiscal year to  $\frac{1}{4}$  of the previous fiscal year.

## ■ Calculation of Constant Dollars

Real health expenditure and real per capita health expenditure are presented in constant 1992 dollars. Constant dollar expenditure was calculated using price indices for public and private expenditures in each province and territory. The indices are the implicit price indices (IPI) for government current expenditure, which are used to deflate public sector health care spending, and the health component of the Consumer Price Index (CPI), used to deflate private sector health care spending. Statistics Canada developed both sets of indices. A more complete explanation of the methodology for calculating implicit price indices is available in Statistics Canada publications.<sup>33</sup>

In the health expenditure series, public and private expenditures are adjusted separately in each province using either the government or CPI (health) implicit price indices. Adjusted values are summed to obtain Canada totals at constant dollar values. As a consequence the overall implicit price index used in the health expenditure series reflects the mix of public and private expenditures reported in the Health Expenditure database.

The government current expenditure implicit price index provided by Statistics Canada was revised in 1999. The revisions included a change in the weights of individual components and an update of price indexes for certain components. The revised government index was available from Statistics Canada, by province, only from 1992 to 1998. In order to develop indices that cover the historical series beginning in 1975, in consultation with officials at Statistics Canada, the growth rates of the revised series of indices from 1992 to 1998 were applied to the indices developed from the pre-1992 set of weights.

The government current expenditure index was forecast for 1999 and 2000 for the provinces and territories. The forecasts are based on the Conference Board of Canada's forecasts of this index for Canada, Ontario and Quebec and CIHI's forecasts of the remaining provinces.

The CPI (health) index was forecast to December 2000 based on the index up to June 2000, which was the latest information available prior to the publication of this report.

---

<sup>33</sup> For example, *Guide to the Income and Expenditure Accounts*, Statistics Canada catalogue number 13-603E, Statistics Canada, Ottawa.

## ■ Calculation of TOTAL Health Expenditure as a Percent of Gross Domestic Product

The Gross Domestic Product at market prices<sup>34</sup> was used to express total health expenditure as a percentage of GDP. National GDP figures for Canada were used rather than the sum of provincial/territorial GDP to calculate the total health expenditure to GDP ratio for Canada.

Gross Domestic Product (GDP) figures provided by Statistics Canada were revised (upward) in 2000. Revised GDP figures for Canada were available from 1975 to 1999. Revised provincial and territorial GDP figures were available from Statistics Canada from 1981 to 1999. No attempt was made by CIHI to estimate provincial GDP prior to 1981. Forecasts of Gross Domestic Product figures at both the national and provincial/territorial levels for 2000 were prepared by CIHI by applying the Conference Board of Canada's 2000 forecasted growth rate of GDP to the 1999 GDP figures from Statistics Canada.

## ■ Calculation of Per Capita Dollars

Per capita health expenditures were calculated using the most recent revised population estimates from the Demography Division of Statistics Canada. This takes into account the results of the census adjustment for net census under-count, non-permanent residents and returning Canadians. Population figures for 2000 are projections provided by the Demography Division of Statistics Canada.

## ■ Calculation of TOTAL Health Expenditure

Total health expenditure refers to the sum of the public and the private sectors. Canada refers to the sum of the 10 provinces and 3 territories. Total health care spending in constant 1992 dollars is the sum of public sector health care spending in constant 1992 dollars and private sector health care spending in constant 1992 dollars. Canada Average is the sum of provincial/territorial expenditures divided by the sum of provincial/territorial data of another variable, such as, population.

## ■ Capital Expenditure

Prior to a major methodology review in 1995, several categories in the private sector were estimated using a residual method, whereby public sector spending was subtracted from an estimated total. The remainder was allocated entirely to the private sector. Following the NHEX methodology review, capital expenditure remained as the only category that was estimated this way. In 1998, the method of calculating capital expenditure was reviewed and revised. Capital expenditure for the private, provincial government and municipal sectors, is now estimated from information obtained from the Investment and Capital Stock Division at Statistics Canada. Capital expenditure in the federal direct sector is obtained from the national public accounts and federal departments that provide health services. There are no capital expenditures in the Social Security Funds sector.

---

<sup>34</sup> Source: National Accounts and Environment Division, Statistics Canada

The implications of this change are twofold; capital expenditure in all sectors is based on full cost or cash basis accounting principles; and, capital is the only category of expenditure in which spending is categorized as private or public based on ownership of the facility in which the investment is made. This convention has been adopted due to data limitations.

## F O R E C A S T I N G   M E T H O D S

Provincial government sector health-spending forecasts for 1999 and 2000 are based on the growth rates of a consistent set of major health programs of provincial health departments reported in provincial Main Estimates and Budgets. In the case of territorial government forecasts of the Northwest Territories and Nunavut in 1999 and 2000, estimates were based on amounts reported in their Main Estimates. In other sectors, 1999 and 2000 figures for these two territories were calculated by developing a forecast for the Northwest Territories and breaking out Nunavut using population.

The 1999 figures for capital expenditure in the provincial government sector, the municipal government sector and the private sector are based on "preliminary actuals" from the Investment and Capital Stock Division of Statistics Canada. The 2000 capital figures are based on "intentions". Forecasts for 1999 and 2000 for the remaining categories, as well as for the Workers' Compensation Boards sector were made entirely based on econometric analysis of time series trends. For each series, up to 40 different univariate forecasting specifications were evaluated, and the best one (based on the root mean square error of prediction) was selected. The functional forms studied included the exponential smoothing family (simple, double, Holt, Brown, Winters, damped trend, etc.); time trends; ARIMA specifications; etc. Logarithmic transformations were used when the data warranted its use.

Forecasts of health expenditures are identified in the figures by special symbols and in the Data Tables by the letter "f".

Gross Domestic Product figures at both the national and provincial/territorial levels for 2000 were forecast by CIHI by applying the Conference Board of Canada's 2000 forecasted growth rate of GDP to the 1999 GDP figures from Statistics Canada.

Population figures for 2000 are projections provided by the Demography Division of Statistics Canada.

The government current expenditure price index was forecast for 1999 and 2000 for the provinces and territories. The forecasts are based on the Conference Board of Canada's forecasts of this index for Canada, Ontario and Quebec and CIHI's forecasts of the remaining provinces.

The CPI (health) index was forecast to December 2000 based on the index up to June 2000, which was the latest information available prior to the publication of this report.

## AGE AND SEX DISTRIBUTION METHODS

The Series E Data Tables present provincial government health expenditure for selected categories of spending by sex and nine age groupings. This is the second year of a data development project to age-sex standardize per capita health expenditure by province. This year CIHI has added two additional categories of expenditure and an estimate of total provincial/territorial government expenditure by age and sex and by province/territory. The five categories presented are hospitals, other institutions, physicians, other professionals and drugs. The method of distributing the five categories and total by age and sex is explained below. The data reported in Series E of the Data Tables are not age-sex standardized.

### ■ Hospitals

The distribution of provincial government hospital expenditure by age and sex is based on information from CIHI's Discharge Abstract Database (DAD)<sup>35</sup> and Hospital Morbidity Database (HMDB). The CIHI 1999 Case Mix grouping methodology (CMG<sup>TM</sup>) was used to group patient discharge information into homogenous groups, based on clinical and resource utilization characteristics.

In the CMG methodology, patients are assigned to a group according to diagnosis and surgical procedures. Within each group patients are further classified into a complexity level based on the number and type of co-morbid diagnoses and the age of the patient. Once the patient is grouped, a Resource Intensity Weight (RIW<sup>TM</sup>)<sup>36</sup> is assigned. The assigned RIWs were then aggregated to generate total weighted cases by age and sex.

The provincial government hospital expenditure estimate for each province is allocated to a given age group based on the weighted cases in that age group relative to total weighted cases. Weighted case information from the DAD and Morbidity Database is for acute inpatient care only. Weighted cases for the majority of hospital-based ambulatory care (i.e. day surgery, emergency departments and clinics) is currently only available in one province. Nevertheless, acute inpatient weighted cases is used as a proxy to distribute the National Health Expenditure estimate of hospital expenditure financed by provincial governments, which includes inpatient and ambulatory care.

CIHI investigated the reasonableness of using the acute inpatient data as a proxy to distribute comprehensive provincial government hospital expenditures by comparing 1998/1999 weighted cases calculated from Alberta's Ambulatory Care data set with the Alberta acute inpatient weighted cases from the DAD/HMDB. The analysis showed that the distribution of ambulatory care weighted cases differs from inpatient weighted cases primarily in the senior age groups. The impact of including the ambulatory care weighted cases with the inpatient weighted cases is to lower per capita spending in the senior age groups from what it would have been based on the inpatient weighted cases only.

---

<sup>35</sup> The Discharge Abstract Database receives information from participating hospitals that represent about 85% of all hospital discharges in Canada. The database contains clinical, demographic and administrative data for inpatient acute, chronic and rehabilitation care and day surgery.

<sup>36</sup> RIWs are resource allocation algorithms, developed by CIHI for estimating the relative hospital resources used for a typical case. See <http://www.cihi.ca/wedo/riw.htm> for more information.

Data from the DAD/HMDB covers 11 jurisdictions across Canada, the territories are combined due to the small number of facilities. The Yukon and Northwest Territories were distributed according to a combined territorial distribution. Data for Prince Edward Island and Saskatchewan from the DAD for 1995/1996 to 1997/1998 represents about 85% total acute hospitalizations within each province, however in 1998/1999 the DAD represents 100% coverage. Weighted cases for Quebec are based entirely on the Hospital Morbidity Database. Quebec weighted cases for fiscal year 1998/1999 were not available in time for this publication, therefore, Quebec estimates for calendar year 1998 hospital expenditure by age and sex are based on weighted cases for 1997/1998 only.

Caution should be exercised when comparing age and sex expenditure estimates across provinces, particularly with respect to Manitoba. Manitoba hospital utilization data is reported to CIHI differently than in other provinces and territories. In addition to acute inpatient care, Manitoba's weighted cases include chronic, rehabilitative and long-term hospital care, which results in higher weights applied to senior age groups, and ultimately higher spending in those age groups. CIHI is currently investigating methods of removing the additional cases in Manitoba to produce an age-sex distribution that is consistent with other provinces. Manitoba weighted cases were generated from the Discharge Abstract Database which represent approximately 65% of total acute hospital separations in Manitoba. All provincial/territorial data was provided in fiscal year and converted to calendar year (see Calculation Methods).

## ■ Physicians

The distribution of provincial government physician expenditure by age and sex is based on information from CIHI's National Physician Database (NPDB). The NPDB contains data on the socio-demographic and billing activities of fee-for-service physicians, as well as on the age and sex of patients. NPDB data is used as a proxy to distribute all physicians services expenditure from the National Health Expenditure database (NHEX). NHEX includes primarily professional fees, paid by provincial medical care insurance plans to physicians in private practice, but also include alternative payment methods such as salaries, sessional and capitation payments.

Fiscal year 1996/1997 data was unavailable from the NPDB for Nova Scotia, and was estimated using growth rates in the population by age and sex applied to the 1995/1996 fee-for-service data from the NPDB. Data for 1995/1996 was also unavailable from NPDB for New Brunswick. Similar to Nova Scotia, it was estimated using growth rates in the population by age and sex applied to 1994/1995 fee-for-services data from the NPDB. Data was available for the Yukon from 1995/1996 and 1996/1997. The growth rates in the Yukon population by age and sex was used to estimate 1997/1998 and 1998/1999. The data from the Yukon was also used to estimate the Northwest Territories by applying the Yukon fee-for-service per capita spending by age and sex to the Northwest Territories population for 1995/1996 and 1996/1997 and then applying growth rates in the NWT population to estimate 1997/1998 and 1998/1999. Data was collected in fiscal year and converted to calendar year (see Calculation Methods).

## ■ Other Institutions

Statistics Canada's Residential Care Facility Survey (RCF) was used to estimate the provincial/territorial age and sex distribution from 1995/1996 to 1998/1999 for other institutions. Facilities for Delinquents, Transients and others, were excluded from the age-sex distribution. Only facilities financed to provide a level of care for type II or higher were considered for the estimation. These levels of care require a minimum of at least one and a half-hours a day of medical and/or professional nursing supervision. Patient counts by age and sex and by predominant level of care within each facility were used to create the distributions.

In order for a facility's patient count to be included it was also necessary for the facility to report both income from provincial/territorial government sources and days of care for provincial government funded clients. Within a particular facility type, patient counts by age and sex were weighted based on the predominant level of care. Weights were generated using the estimated cost per patient for a particular type of care relative to type II. That is, type II care was the basis and had a weight of one. Once patient counts by age and sex, level of care, and facility type were assigned weights, the patient counts were aggregated to create total weighted provincial or territorial patient counts. A distribution across age and sex was generated and then applied to the appropriate provincial/territorial NHEX figure for other institutions. The age groups from the RCF (<10, 11–17, 18–44, 45–64, 65–69, 70–74, 75–79, 80–84, 85+) were expanded into 5-year age groups by CIHI using provincial/territorial populations by sex and single year of age.

At the time of publication data was unavailable for Quebec from the 1996/1997 and 1997/1998 RCF. Also at the time of publication, data for Alberta from the 1997/1998 RCF was unavailable. In 1996/1997 the Canada total for other institutions per capita spending by age and sex was applied to the Quebec population to obtain an estimate for Quebec's age-sex distribution for other institutions in 1996/1997. Quebec's 1997/1998 spending by age-sex was estimated by applying the 1997/1998 growth rates in the population by age and sex to the 1996/1997 Quebec other institutions expenditure estimates. The same procedure was used for Alberta in 1997/1998 using Alberta's population. Estimates for 1995/1996 and 1998/1999 were also generated using growth rates across age groups and sex in the population applied to the 1996/1997 and 1997/1998 other institutions spending estimates by province and territory. Data was then converted into calendar year (see Calculation Methods).

## ■ Drugs

Provincial government prescribed drug expenditure primarily includes drugs that are dispensed through provincial drug subsidy programs. The level of coverage under these programs varies across the country. Universal drug plans with first dollar coverage to all residents are currently not available in any province. Most provincial government plans provide prescribed drugs to seniors, and welfare recipients. British Columbia, Saskatchewan and Manitoba provide some coverage to all residents with an assortment of substantial individual deductibles and co-payments. Similarly, Quebec instituted a universal plan in 1997 that requires Quebec residents to be covered under the provincial plan if a private group plan, usually available through an employer, is not available.

CIHI requested drug claims that were paid in a given year, by age and sex from each provincial drug subsidy program. Drug claim information by age and sex are currently unavailable from Newfoundland, Prince Edward Island and the Yukon.

Data from Nova Scotia consists of the Seniors Pharmacare Program and prescription drug claims paid by the Department of Community Services through the Income Assistance Program and Family Benefits Program. Data from the Special Drug Program was unavailable; expenditure for this plan was distributed using data from the Department of Community Services.

Data collected from the New Brunswick Prescription Drug Program consists of ten different drug plans. Age-sex data were provided for the following plans: Seniors Plan (A), Cystic Fibrosis Plan (B), Family and Community Social Services (E), Human Resources Development (F), Organ Transplant (R), Human Growth Hormone (T), and Nursing Home Program (V), leaving only three plans with no age and sex data: Children in Care (G), HIV (U), and Special Authorization (SA) (for drugs not normally covered under the provincial formulary). Beginning in October 1996, claims under SA are included in six other plans (A, B, G, R, T, and V) if the claimant is a beneficiary of one of these plans. In September of 1997 this was expanded to include plans E and F. Minor plans for which age-sex data were not available were distributed using the overall distribution of plans for which data was available.

The Quebec Ministry of Health and Social Services supplied data on its drug subsidy program in calendar year, with individuals 85 years and older aggregated into one category. The plans included coverage for seniors, income security recipients, and others. Data for 1997 to 1998 also included a general client group representing recipients whose drug claims are paid through the self financed drug insurance fund by the premiums of subscribers to the plan and not the provincial government. Consequently, the age-sex distribution of this group was not included with the rest of the provincial government program.<sup>37</sup> Age category 85–89 in the Data Tables E.5.1-.3 for Quebec represents individuals 85 years of age and older.

The Ontario Drug Benefits program (ODB) supplied age-sex data, which included combined prescription drug claims paid by both the Ministry of Health and Ministry of Community Services, as well as data for the Trillium Drug Program, which was implemented in April 1995. The Special Drug Program does not have an age-sex profile; its expenditure was therefore applied to the ODB distribution.

Manitoba was unable to provide data for fiscal year 1996/1997 because of the Drug Programs Information Network (DPIN) conversion from a calendar year to a fiscal year system. This resulted in a 15-month year from January 1996 to April 1997. Data on drug claims paid for fiscal year 1997/1998 and 1998/1999 was supplied for both the Department of Health and the Ministry of Family Services, Employment and Income Assistance Division. The figures reported for Manitoba in 1997 are based on fiscal year data for 1997/1998.

Data supplied by the Saskatchewan Drug Plan and Extended Benefits Branch was in calendar year.

---

<sup>37</sup> See the definition of Social Security Funds in the definitions section of this report for more information.

Alberta Health and Wellness and Alberta Human Resources and Employment provided expenditure data by age and sex on their respective prescription drug programs. Data from Alberta Health and Wellness drug plan, which is administered by Alberta Blue Cross, consists of three plans: Seniors, Widow's Pension, and Regular. The data from Alberta Human Resources and Employment are for the departments' prescription drug expenditure under the Employment and Income Assistance programs (formerly under Alberta Family and Social Services). The age category 85–89 in Data Tables E.5.1–.3 for Alberta represents individuals 85 years of age and older.

British Columbia Ministry of Health and Ministry Responsible for Seniors supplied claims paid by age and sex of the client in calendar year from 1996 to 1998 for each plan administered by their Pharmacare program. NHEX drug plan expenditures for British Columbia were converted to calendar year and then applied to the distribution of the appropriate data supplied by the province.

Northwest Territories Department of Health and Social Services supplied data by age and sex for prescription drug claims paid for Extended Health Benefits (EHB).

The provincial government drug estimate at the program level is allocated to a given age group based on the value of claims paid in that age group relative to total claims paid. In provinces with more than one program, the age-sex-distributed programs were combined to represent a total estimate for the province. Most data were collected in fiscal year and converted to calendar year (see Calculation Methods).

### ■ Other Professionals

Other professionals expenditure account for approximately 1% of total provincial/territorial expenditure in 1998. Provincial/territorial governments provide a variety of health services delivered by health professionals including primarily dentists, optometrists, chiropractors and physiotherapists. All provinces' provide various programs for seniors and children, as well as programs for income assistance recipients. However, the services provided vary considerably across Canada, for instance, Ontario, British Columbia, and Quebec provide physiotherapy services to residents, while other provinces do not. Chiropractic services are provided through provincial insurance plans from Ontario west to British Columbia, but nowhere else in Canada. Target populations, co-payments and deductibles also vary from provinces to province. CIHI requested from each province data for claims that were paid for by provincial/territorial governments in a given year, by age and sex, and type of service provided by other health care professionals. Details of data availability and estimation methods are described below.

Data was unavailable from Prince Edward Island, New Brunswick and the Yukon Territory. The remaining provinces and territories were able to supply data by age and sex for 75% or more of other professional services. When a province or territory was unable to supply 100% of services, CIHI estimated the age and sex distribution for these services by using programs from other provinces with programs that had similar coverage and eligibility levels.

The provincial government other professionals estimate at the program level is allocated to a given age group based on the value of claims paid in that age group relative to total claims paid. In provinces with more than one program the age-sex-distributed programs were combined to represent a total estimate for the provinces' other professionals expenditure. Age category 85-89 in the Data Tables E.4.1-.3 for Quebec represents individuals 85 years of age and older. Most data were collected in fiscal year and converted to calendar year (see Calculation Methods).

### ■ Total Provincial Government Health Expenditure by Age and Sex

To age-sex standardize total provincial government health expenditures it is necessary that all categories of expenditure be distributed by age and sex for each province.

Unfortunately age-sex distributions for all provincial/territorial government expenditures is currently not available in all provinces and territories. Consequently, CIHI estimated the missing data using the following methods. The age-sex distributions of drug subsidy programs for Newfoundland, Prince Edward Island and the Yukon Territory were estimated for 1996 to 1998 using the distributions of drug subsidy programs in other provinces with similar target populations and co-payment plans. Newfoundland and the Yukon age-sex distributions were based on New Brunswick's Seniors, Community and Social Services drug plans (plans A, E and F). In the case of the Yukon the New Brunswick Cystic Fibrosis drug plan (plan B) was also used to distribute the Yukon Children's Chronic Care drug plan. Prince Edward Island's age-sex distribution for drug expenditure was based on the Nova Scotia Seniors and Community Services drug plans

The age sex distributions of the other professionals' category in Prince Edward Island, New Brunswick and the Yukon Territory were estimated from 1996 to 1998. The age-sex distributions of these provinces were based on the distributions in other provinces of other health care provider programs that had similar beneficiaries and co-payment plans. Dental expenditure by age and sex in PEI was based on the NFLD Dental Health Plan clients from 3 to 16 years of age. Similarly, New Brunswick's dental expenditure for the youth income assistance plan was based on clients up to 17 years of age from the NFLD dental plan. New Brunswick's age and sex distribution for the income assistance optometry plan was based on Saskatchewan Health's Supplementary Health Optometry plan. Quebec's physiotherapy expenditure is distributed across a combined age-sex distribution of Ontario and British Columbia's fee-for-service physiotherapy plans. The age-sex distribution for the Yukon seniors' Extended Health Benefits (EHB) optometry and dental plans are based on Alberta's EHB optometry and dental plans. The children's optometry plan in the Yukon is based on clients up to the age of 18 from the Nova Scotia optometry plan. Similarly, the Yukon children's dental plan is based on the NFLD dental plan for clients up to the age of 18.

Capital expenditure was estimated for all provinces and territories by using the general provincial/territorial populations by age and sex. This method was used based on two criteria: (i) capital investments in health care institutions typically last for decades and those who do not use institutional services in a given year may use them in the future; (ii) given the uncertainty of illness the availability of facilities has a value for all who potentially would use them if the need arises.

The category of other health spending was also estimated using the general provincial/territorial populations by age and sex based on the following rationale. Public health and health research benefit the entire population and it would be difficult to attribute them in different proportions to specific age and sex groups. Prepayment administration expenditures are accounted for mainly by the universal hospital and physicians services plans. The rationale for distributing them according to the general population rather than utilization lies in the fact that prepayment administration expenses are made up largely of the costs of registration systems for eligible residents, which cover the total population, and claims processing costs. The convention of allocating ambulance expenditure by population distributions is not believed to result in significant error of the total provincial expenditure distributions due to its small share of the other health spending category.

### ■ **Age-Sex Standardization of Provincial Government Expenditures**

For the purpose of age-sex standardization CIHI used a direct method. Standardized expenditures by category were calculated by multiplying the male and female population of Canada in each of 20 age groups by the expenditure per capita for each age group and sex by province and territory. Male and female standardized expenditure was aggregated and then divided by the total Canada population in 1998 to generate the standardized per capita spending for a particular category by province and territory.

## HISTORICAL DATA REVISIONS

In the process of compiling the National Health Expenditure series new information becomes available, methods are refined, and data sources are improved. The data are revised to incorporate these enhancements.

Capital Expenditures in the sector of provincial and municipal governments and in the private sector were revised in all provinces/territories from 1991 to 1997 as Statistics Canada changed its industry classification system to the North American Industry Classification System (NAICS). Not all jurisdictions or sectors were affected in all years.

### ■ Provincial Government Sector

CIHI's 1998/1999 estimates of provincial government health expenditure were submitted to provincial departments of health for review. Most of the revisions in this section are based on comments from that process. A summary of the changes is presented below, with the exception of the revisions to capital expenditures.

Newfoundland—An expenditure of \$5 million on personal care homes was reclassified from public health to other institutions in 1997.

Prince Edward Island—Estimates in 1996 and 1997 were revised for hospitals, other institutions and other health spending due to a methodology refinement. This resulted in the addition of \$5.4 million to the 1996 estimate and \$1.3 million to 1997.

Nova Scotia— The hospital category in 1997 was revised upward due to the inclusion of \$156.4 million paid in 1998/1999 by the Nova Scotia Department of Finance to cover deficits incurred by Regional Health Boards in 1997/1998 and earlier years. The Nova Scotia Department of Health recommended that the entire amount, \$156.4 million, be included in 1997/1998. Expenditure estimates for hospitals were adjusted from 1994 to 1997 to avoid a double count. These revisions reduced estimates by \$6.3 million in 1994, \$10.4 million in 1995, \$12.8 million in 1996, and increased them by \$93.6 million in 1997.

New Brunswick—Extra-Mural Program expenditures from 1981 to 1997 were reclassified from hospitals to home care under "other health spending". Expenditure estimates for hospitals were adjusted to avoid a double count: this resulted in a reduction of \$0.6 million in 1991, \$0.5 million in 1992, \$1.2 million in 1993, \$1.7 million in 1994 and \$0.4 million in 1995.

Quebec—Hospital expenditures from 1995 to 1997 and expenditures on physicians in 1996 and 1997 were revised to incorporate new information, primarily related to a one-time expenditure paid by the province in 1998/1999 to cover deficits incurred by hospitals in these years. Expenditure estimates for "other institutions" and "other health spending" also were revised for the fiscal year 1997/1998, based on new information. These revisions resulted in a total expenditure increase of \$64.2 million in 1995, \$46.1 million in 1996 and \$732.6 million in 1997.

Manitoba—A reduction of \$0.2 million was made for expenditures on hospitals and physicians, based on new information. From 1993 to 1997 a minor reclassification of spending occurred in some categories as a result of new information.

Saskatchewan—Public health and occupational health expenditures were revised based on new information, by less than \$1 million in each year from 1990 to 1992. The estimate for 1997 increased slightly, by \$0.2 million due to revisions in the following categories: hospitals, public health and hearing aids.

Alberta—Public health expenditure estimates were revised to exclude Community Based Individual Services, which is not considered health care services. This revision resulted in a decrease of \$58.1 million in 1995, \$79.7 million in 1996 and \$73.1 million in 1997. An amount of \$1.9 million in 1996 and \$2.7 million in 1997 was reclassified, primarily from drug expenditures to expenditures on health appliances.

British Columbia—The Ministry of Health expenditure estimates were revised for all seven categories from 1992 to 1997, based on the Ministry's Financial Management Reports. Exceptions are physicians from 1992 to 1995; other professionals from 1993 to 1995 and drugs in 1995 and 1996. Total revisions accounted for decreases of \$8.6 million in 1992, \$106.6 million in 1993, \$59.6 million in 1996, \$19.6 million in 1997, and increases of \$141.8 million in 1994 and \$57.3 million in 1995.

Northwest Territories—Drug spending for Non-Insured Health Benefits was removed from the Territories' spending estimates from 1993 to 1997. Ambulance expenditures were revised as per new information provided by the Territories for the same period. Total estimates for the Territories decreased by \$1.5 million in 1993, \$2.7 million in 1994, \$2.1 million in 1995, \$4.0 million in 1996 and \$5.0 million in 1997.

The differences between the revised and original figures in the provincial government sector for the provinces and territories, including revisions to the estimates of capital expenditures, are summarized below (Table 11).

**Table 11—Differences from Previously Reported Provincial Government Sector Data by Province/Territory and Canada, 1990 to 1997 (\$ millions)**

| Year | Nfld. | P.E.I. | N.S. | N.B.  | Que.  | Ont.  | Man. | Sask. | Alta. | B.C.   | Y.T. | N.W.T. | Nun. | Canada |

## ■ Private Sector

Hospital expenditures in all provinces and territories except Nova Scotia were revised for 1996 and/or 1997, based on new information available from the most recent Annual Hospital Survey.

Spending on “other institutions” was revised for all jurisdictions in various years between 1993 and 1997 due to new information from Statistics Canada’s Residential Care Facilities Survey for 1996/1997 and 1997/1998.

Spending estimates on non-prescribed drugs, composed of over-the-counter drugs and personal health supplies, were revised from 1992 to 1997 for the Atlantic Provinces, Manitoba, Saskatchewan and the territories. Estimates of expenditures on personal health supplies also were revised for Alberta and British Columbia for the same period. The revisions are the result of changes in sales tax and an update of population estimates from Statistics Canada.

Other minor revisions were made for prepayment administration and health research expenditures in the Maritime Provinces in 1993, 1994 and/or 1997. All categories in Ontario were revised from 1988 to 1997, due to an adjustment in the calculation of private insurance spending.

Total differences from 1988 to 1997 between the revised and original estimates for expenditures in the private sector for the provinces and territories are listed below (Table 12).

**Table 12—Differences from Previously Reported Private Sector Data  
by Province/Territory and Canada, 1988 to 1997  
(\$ millions)**

| Year | Nfld. | P.E.I. | N.S. | N.B.  | Que.  | Ont.   | Man. | Sask. | Alta. | B.C. | Y.T. | N.W.T. | Nun. | Canada |

## ■ Federal Direct Sector

Since 1999, provincial level data in the federal direct sector have been collected directly from federal departments and are augmented with information from the National Public Accounts. This year, the data were reviewed further and prescribed drugs and three components of other health spending, including health research, occupational health and unspecified expenditures were revised back to 1988. Health research expenditures in 1997 were increased by \$270 million to reflect a one-time cash injection by the federal government to health research organizations. Expenditure estimates for hospitals, physicians, other professionals, capital and some other components under "other health spending" were revised by relatively small amounts in more recent years. The differences between the revised and original figures are summarized below (Table 13).

**Table 13—Differences from Previously Reported Federal Direct Sector Data by Province/Territory and Canada, 1988 to 1997 (\$ millions)**

| Year | Nfld. | P.E.I. | N.S. | N.B. | Que. | Ont.  | Man. | Sask. | Alta. | B.C. | Y.T. | N.W.T. | Nun. | Canada |

| 1992 | ---   | ---    | 0.1  | 0.1  | 1.6  | 2.9   | 0.1  | ---   | 0.9   | 1.7  | ---  | ---    | ---  | 7.2    |
| 1993 | ---   | ---    | -0.1 | 0.1  | 2.2  | 3.5   | ---  | ---   | 1.4   | 2.3  | ---  | ---    | ---  | 9.4    |
| 1994 | 0.1   | ---    | ---  | 0.2  | 4.2  | 7.5   | 0.7  | 0.6   | 2.5   | 3.8  | 0.1  | 0.2    | ---  | 19.8   |
| 1995 | 0.6   | ---    | 5.1  | 1.7  | 8.6  | 23.2  | 2.1  | 0.6   | 5.3   | 7.3  | 0.1  | 0.2    | ---  | 54.8   |
| 1996 | 0.4   | ---    | 4.7  | 1.2  | 9.2  | 22.4  | 0.2  | -0.3  | 0.7   | 10.8 | ---  | ---    | ---  | 49.4   |
| 1997 | 0.2   | -0.1   | 3.0  | 0.4  | 63.2 | 137.2 | 4.6  | 0.9   | 27.1  | 33.9 | -0.1 | -0.3   | ---  | 270.0  |

## ■ Municipal Government Sector

Hospital expenditures in the municipal government sector were revised downward substantially for the entire series, primarily to exclude own-source revenue reported in hospitals. The affected provinces are Prince Edward Island in 1996 and 1997, Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta from 1975 to 1997 and British Columbia from 1984 to 1997. Dental and public health expenditures, which have the same data source as hospital information, were revised from the beginning of the 1990s to 1997. Dental expenditure estimates were revised for Manitoba and British Columbia, while public health expenditure was revised in all jurisdictions with the exception of Prince Edward Island and Nova Scotia. The total amount of the revisions, including revisions on capital, are listed below (Table 14).

**Table 14—Differences from Previously Reported Municipal Government Sector Data by Province/Territory and Canada, 1975 to 1997 (\$ millions)**

| Year | Nfld. | P.E.I. | N.S.  | N.B. | Que. | Ont.   | Man. | Sask. | Alta.  | B.C. | Y.T. | N.W.T. | Nun. | Canada |

■ **Social Security Fund (previously Workers' Compensation Board) Sector**

Historical data in this sector were reviewed during preparation of this year's report. Estimated expenditures for "other professionals" and some components of "other health spending" in Newfoundland, such as ambulances, hearing aids and unspecified health services, were revised in 1997. All the categories in Prince Edward Island were revised from 1992 to 1997 based on new data provided by the Prince Edward Island Workers' Compensation Board. In Nova Scotia, additional drug and unspecified expenditures in 1996 and 1997 were included based on new information. Drug expenditures in Quebec in 1997 were revised to include the Quebec Drug Insurance Fund. Manitoba's spending on physicians and physiotherapists was revised in 1997 due to calculation adjustments. Expenditure estimates in British Columbia increased in 1997, because two new items were added to "physicians" and "unspecified services". Finally, occupational health expenditures were revised for Quebec from 1979 to 1997, Ontario from 1990 to 1997, Saskatchewan from 1987 to 1997, and the Northwest Territories in 1995 and 1996, based on new information. The revisions are summarized below (Table 15).

**Table 15—Differences from Previously Reported Social Security Fund Data  
by Province/Territory and Canada, 1979 to 1997  
(\$ millions)**

| Year | Nfld. | P.E.I. | N.S. | N.B. | Que.  | Ont. | Man. | Sask. | Alta. | B.C. | Y.T. | N.W.T. | Nun. | Canada |

■ **Age and Sex Expenditure Data**

Changes to the age-sex distributions from the 1999 publication occurred due to methodology revisions and new information from data sources. For more detailed information please contact the NHEX section by telephone, (613) 241-7860 or by email [nhex@cihi.ca](mailto:nhex@cihi.ca).

■ **Economic and Demographic Data**

Statistics Canada recently revised their population estimates. The estimates in this report are now based on the latest released data of October 2000. Statistics Canada also revised estimates of Provincial Government Programs Spending; Provincial and National Gross Domestic Product; and the Implicit Price Index for Government Current Expenditure used in this report.

## SOURCES OF DATA

National Health Expenditure estimates are compiled based on information from the following sources.

### ■ Provincial Government Sector

- Provincial Public Accounts and Main Estimates
- Provincial Departments of Health Annual Reports and Statistical Supplements where available
- Annual Reports of various foundations, agencies and commissions
- Special tabulations and specific information from various provincial departments reporting health expenditures.
- Federal Transfers are part of Provincial Government
  - EPF, CHST—Federal-Provincial Relations Division, Federal Department of Finance
  - CAP—Cost Shared Programs Division, Human Resources and Development Canada
  - Contributions to the Governments of the Northwest and Yukon Territories—Public Accounts of Canada, Department of Indian Affairs and Northern Development
  - Health Resource Fund—Health Canada

### ■ Federal Direct Sector

- Public Accounts of Canada
- Special tabulations/information from:
  - Health Canada
  - Department of Veterans Affairs
  - Department of National Defense
  - Solicitor General of Canada

### ■ Social Security Funds Sector

- Special tabulations on medical aid spending provided by the provincial/territorial Workers' Compensation Boards
- Annual Reports of provincial/territorial Workers' Compensation Boards
- Annual Report of the Régie de l'assurance-maladie du Québec

### ■ Municipal Government Sector

- Special tabulation purchased from the Public Institutions Division of Statistics Canada.
- Special tabulations from the Residential Care Facilities survey administered by the Health Statistics Division of Statistics Canada.

## ■ Private Sector

- Private Insurance Component
  - The *not-for-profit* portion is captured from special tabulations provided by the not-for-profit insurance companies.
  - The *commercial* portion is captured by a special tabulation provided by the Canadian Life and Health Insurance Association (CLHIA).
- Out-of-pocket Component
  - Survey of Household Spending, Statistics Canada (formerly the Family Expenditures Survey (FAMEX)), except for the following categories
  - **Hospitals**—(adjusted income from *patient services*) Annual Return of Health Care Facilities, fielded by Statistics Canada to 1994/1995, and the Annual Hospital Survey fielded by CIHI from 1995/1996 to 1997/1998
  - **Other Institutions**—Residential Care Facilities Survey fielded by Statistics Canada
  - **Over-the-Counter Drugs and Personal Health Supplies**—Market Review of Selected Drug Categories at Retail, a special tabulation purchased from AC Nielsen Canada
- Non-consumption Component
  - **Hospitals**—(adjusted income from *non-patient services*) Annual Return of Health Care Facilities, Part 2 fielded by Statistics Canada to 1994/1995 and the Annual Hospital Survey fielded by CIHI from 1995/1996 to 1997/1998
  - **Capital Expenditures**—special tabulation purchased from the Investment and Capital Stock Division of Statistics Canada
  - **Health Research**—The Association of Canadian Medical Colleges, *Canadian Medical Education Statistics*, Expenditure for Biomedical and Health Care Research of Canadian Faculties of Medicine by Source of Funds.

## ■ Age and Sex Data

- CIHI's Discharge Abstract Database (DAD) and Hospital Morbidity Database (HMDB)
- CIHI's National Physician Database (NPDB)
- Special tabulations provided by provincial/territorial government departments responsible for administering drug and other health benefit programs
- Statistic Canada's Residential Care Facility Survey (RCF)

## ■ Economic and Demographic Data

- Gross Domestic Product
  - 1975–1999—purchased from National Accounts and Environment Division, Statistics Canada
  - 2000 purchased from Conference Board of Canada (GDP growth rates)
- Population: from the Demography Division, Statistics Canada
- Price Indices: Income and Expenditure Accounts Division and Prices Division, Statistics Canada

# Data Tables

---

This section provides the detailed health expenditure data. These data tables are organized as follows:

## Series

A—Summary Data, Canada

B—Total Health Expenditure, by Source of Finance, by Province/Territory and Canada

C—Health Expenditure, by Use of Funds, by Source of Finance, Canada

D—Health Expenditure, by Use of Funds, Source of Finance, by Province/Territory

E—Provincial Government Health Expenditure, by Selected Uses of Funds, by Age and Sex, by Province/Territory and Canada

Each series generally follows the order below except as indicated. In addition, tables in A.3, Series D and Series E are not available in constant dollar values.

## *Current dollars*

- in millions of dollars
- percentage distribution (Use of Funds only)
- per capita
- sector as a proportion of:
  - GDP (B.1 only)
  - total health expenditure (B.2 to B.8 series only)

## *Constant dollars*

- in millions of 1992 dollars (A and B series only)
- in 1992 dollars per capita (A and B series only)

Most sub-series also includes a table of annual percentage changes.

In all tables, forecasts are denoted with the letter “f” and the symbol “---” denotes data that is either unavailable or not applicable.

**Series A**  
**Summary Data, Canada**

NATIONAL HEALTH EXPENDITURE TRENDS DATA TABLES
