Note: In British-Columbia, Alberta, Ontario, Quebec, only half (samples collected during the first 15 days of each month) of S. Typhimurium isolates were forwarded during the year. Some phagetype / AMR pattern combinations could have been undetected. Swine samples are from abattoir surveillance from September 2002 to December 2003. Those phagetype - AMR pattern only observed in 2002 are highlighted by an asterisk.
