Canada Mortgage and Housing Corporation

Another High Construction Year

Ontario has moved into its third year of a sustained strong home construction plateau, with the quarterly Seasonally Adjusted Annualized Rate (SAAR) of home starts zig-zagging near a 15 year record. Third quarter home starts edged down from an exceptionally strong second quarter showing. Detached home starts were lower, while condominium apartment construction made noticeable gains. Annual starts for 2004 have a high likelihood of coming close to last year's, or slightly surpassing them and setting a 15 year record.

Of Ontario's Census Metropolitan

Areas (CMAs), Hamilton (+ 37%), Sudbury (+ 27%) and St. Catharines (+ 26%) had the highest September year-to-date percentage increases in home starts over the same period last year. Kingston (- 22%), Oshawa (-14%) and Kitchener (- 5%) registered the largest declines. In Toronto, where home construction has been running flat out for a number of years, year-to-date starts pulled back by five per cent.

Strong housing demand is boosting new home prices. Seven of the eight Ontario centres for which Statistics

HOME TO CANADIANS
Canada

Canada produces New House Price Indexes (NHPI) show new home prices outpacing inflation. September NHPI data had the largest increases in St. Catharines-Niagara (8.1 %), Ottawa-Gatineau (7.4 %), Toronto (6.1 %) and Hamilton (5.6 %). New home prices in these centres rose more than triple September's 1.8 per cent inflation rate.

Existing Home Market: Record Sales

Strong home buyer demand will lead to an all-time record number of transactions through the Multiple Listings Services (MLS) in 2004. Last year was a record sales year and sales for the first nine months of 2004 were almost nine per cent higher than over the same period in 2003.

Prices of home sold through the MLS

have also shot up. Ontario's average MLS price, adjusted for inflation using the Consumer Price Index, has been fluctuating around its highest level since December of 1989. The average price of homes sold year-to-date is 8.4 per cent higher than over the same period last year — a growth of more than four times the inflation rate.

With home prices high, more and more people are willing to put their homes on the resale market to cash-in on equity gains. The supply of new listings has been growing steadily since the turn of this millennium and they are currently running near their highest levels since early 1992. Consequently, the sales to new listings ratio, which is a leading indicator of home prices, has edged down in September, but to a level which suggests above inflation home price growth will continue.

Economy: Average Growth

On the economic front the province's indicators are mixed. Ontario's retail sales are high. Automobile purchases have waned suggesting saturation in demand for big ticket items.

Housing demand is being supported by respectable job growth and very low by historic standards mortgage rates. A Canadian economy operating near production capacity is prompting the Bank of Canada to nudge interest rates up. On October 19 the Bank of Canada announced its second consecutive quarter percentage point increase in its target for the overnight lending rate and further increases are predicted.

Population growth is a major factor boosting housing demand. Birth rates are low making migration the dominant contributor to population growth. The 2004 net migration story for Ontario is one of very high immigration, partially offset by much lower and growing inter-provincial and non-permanent resident outflows. An analysis of Ontario migration data for the first two quarters of the year suggests levels this year were consistent with an annual net immigration in the high 80 thousands or low 90 thousands — below 101,198 net arrivals last year.

Definitions

- Starts:** refers to units where construction has advanced to a stage where full (100%) footings are in place. For multiple dwellings (semi-detached, row housing and apartments) the definition of a start applies to the structure or block of row units rather than to the project as a whole.
- Under Construction:** those units which have been started but which are not complete.
- Completions - Single-detached/semi-detached units:** this generally is the stage at which all proposed construction work is complete. A unit may be completed at the 90% stage where the remaining work is largely cosmetic. **Row housing/ Apartment:** completions means that 90% or more of the dwelling units within a block of row units or an apartment structure are completed and ready for occupancy
- Completed and Not Absorbed:** all completed units of new construction (excluding model homes not available for sale) which have never been sold or leased.
- Absorptions:** the number of completed units (excluding model homes) that have been sold or leased.
- Seasonally Adjusted (SA):** Actual monthly (or quarterly) figures adjusted to remove normal seasonal variation.
- Seasonally Adjust Annual Rates (SAAR):** Seasonally adjusted monthly figures multiplied by 12 (or quarterly figures multiplied by 4) to reflect annualized levels of activity.
- Definitions for **CMA**, **NHPI**, **CPI**, and **Inflation Rate** can be found in the Statistics Canada website - <http://www.statcan.ca>
