Government of Canada Core Subject Thesaurus

1. Introduction

The Government of Canada (GoC) Core Subject Thesaurus has been developed to help Content managers, Librarians and Metadata developers in federal departments and agencies to select controlled subject terms for metadata requirements under TBITS 39.1 & 2. The GoC Core Subject Thesaurus (CST) is to be used as a source of standardized terminology for the indexing and retrieval of GoC information resources in various formats. Its main function is to standardize the external form and meaning of index terms, thus ensuring that a particular concept or subject will always be represented in the same way in GoC metadata resources.

2. Background

The CST is derived from the Depository Services Program (DSP) Subject Thesaurus. The DSP thesaurus was developed over a number of years as a source of subject descriptors to be applied to bibliographic records in the Government of Canada Publications Database. It was developed in accordance with the Guidelines for the establishment and development of monolingual thesauri (ISO 2788-1986) and the Guidelines for the establishment and development of multilingual thesauri (ISO 5964-1985). It is thus fully compatible with other thesauri that adhere to ISO standards.

3. Coverage

The CST has been developed on the basis of a number of indexing projects that extracted broad, high-level terminology used in GoC publications. Therefore, it represents the language generally used in information resources across government. By design, it does not include specialized terminology used in specific and limited disciplines. All fields of knowledge are represented, but to varying degrees in specific subject areas. The English version of this thesaurus contains 3806 terms (2098 descriptors and 1708 lead-in terms). A French equivalent is provided for each descriptor.

4. Official Languages

The English and French versions of the CST were developed and are maintained simultaneously and neither language is to be considered the dominant or source language in this vocabulary. Neither language is a translation of the other; they are each in a relationship of equivalence. The English thesaurus (CST) and the French thesaurus (TSB) are identical in their coverage but their respective relational structures are not identical due to the natural conceptual and terminological differences between the two languages.

5. Audience

The intended users of this thesaurus consist primarily of those who have the responsibility for building, enhancing or revising Web sites within the Government of Canada. This includes Web developers, librarians, content providers, indexers, Web technologists and communications personnel. It is anticipated that indexers will use this thesaurus as an authoritative source of controlled vocabulary.

6. Basic Thesaurus Characteristics

A thesaurus is a controlled vocabulary arranged in a known order (not necessarily alphabetic) in which equivalence (USE; USE FOR), homographic (variant spellings), hierarchical (Broader Term; Narrower Term) and associative (Related Term) relationships among terms are clearly displayed and identified by standardized relationship indicators. A thesaurus also contains synonyms, or “lead-in” terms that may be used as the conceptual point of entry by searchers or indexers, instead of the designated indexing terms. As such, they “lead” users to the “preferred” term that is consistently used in indexing information resources that contain the subject or concept that the user is looking for.

7. Thesaurus Display

Subject Descriptors

In the CST, subject descriptors (also known as “indexing” or “preferred” terms) are displayed so as to make their associative, equivalence, and hierarchical relationships obvious at a glance. Subject descriptors are terms that are authorized for use in indexing and may be used for searching indexed information resources. In the alphabetical display of subject terms, descriptors appear in bold face.

Lead-in Terms

Lead-in terms (also known as “non-preferred” terms) are not used in indexing. They are synonyms or alternate forms of subject descriptors that point to or “lead-in” to a single “preferred” descriptor. In the alphabetical display of subject terms, lead-in terms appear in regular typeface and in italics. Lead-in terms are followed by a reference to the authorized descriptor for the concept.

Form of Terms

In this thesaurus and by convention, English descriptors representing concrete objects or entities (things can be counted) normally appear in the plural form (e.g., “Colleges”, “Persons with disabilities”). Descriptors representing abstract concepts or collections of things (i.e., abstract or collective nouns) appear in the singular form (e.g., “Air quality”, “Energy”). In contrast, and again by linguistic convention, terms in the French thesaurus generally appear in the singular form. All terms appear in direct rather than inverted order as they would in natural speech (e.g., “Elementary education”, not “Education, elementary”)

Form of Display

The following example shows the form of display of an individual preferred term record.

Libraries

- FRE: Bibliothèque
- UF: Documentation services
Library collections
- BT: Cultural institutions
- NT: Digital libraries
Government libraries
National libraries
Public libraries
Special libraries
- RT: Bibliographic data interchange
Cataloguing
Interlibrary loans
Reference services
- SN: A collection of books and other materials
maintained for reading, consultation,
study and research and organized to
provide access to a specific clientele,
with a staff trained to provide services to
meet the needs of its users.
- SC: IN Information and Communications

Display Elements

Libraries

The subject descriptor of record (“Libraries”)

FRENCH (FRE):

The French equivalent appears in regular typeface immediately below the descriptor heading. In the French thesaurus (TSB), the French descriptor is shown with its own set of relations to other terms in that thesaurus.

Used for (UF):

Under the category “Used for” are terms that are synonymous with the authorized indexing term. Synonyms are included in the thesaurus to lead indexers to the authorized indexing term; hence, they are known as “lead-in” terms. Do not select “Used for” terms as indexing terms; use only the authorized indexing terms (also known as “preferred terms”).

Lead-in term records are displayed as follows:

Documentation services
USE: Libraries
SC: IN Information and Communications

Note the instruction to use “Libraries” instead of “Documentation services”

Broader Terms (BT):

Broader terms are subject descriptors that are more general than the descriptor of record. In this example, “Cultural institutions” are broader than “Libraries”. Generally, broader and narrower terms are in a relationship of either a “genus / species” or “whole / part” relationship to the descriptor of record.

Narrower Terms (NT):

Narrower terms are more restricted in meaning than the descriptor of record.

Related Terms (RT):

Related terms have a semantic, contextual or usage association with the descriptor of record that is exclusive of a “genus / species” or “whole / part” relationship.

Scope Note (SN):

A Scope Note indicates the limited sense in which the term is to be used for indexing purposes, thus excluding other meanings. It may take the form of a definition or it may prohibit or restrict specific uses.

Subject Category (SC):

Subject Categories are not to be used as indexing terms. A Subject Category is a broad, general topic to which a term has been assigned. Terms may be assigned to more than one category. In the CST, 19 Subject Categories have been established. Both preferred and non-preferred terms have at least one Subject Category applied to them.

CST Subject Categories

AA Arts, Music, Literature	LN Language and Linguistics
AG Agriculture	LW Law
EC Economics and Industry	MI Military
ET Education and Training	NE Nature and Environment
FM Form descriptors	PE Persons
GV Government and Politics	PR Processes
HE Health and Safety	SO Society and Culture
HI History and Archaeology	ST Science and Technology
IN Information and communications	TR Transport
LB Labour	

Indexing Guidelines

Introduction

The CST is designed to be a broad, high-level post-coordinated thesaurus. Post-coordination means that most concepts are represented by single words; compound terms are used only when there is no alternative or when that phrase is commonly used to represent that concept. Subjects to be identified and indexed are represented by one or more terms as appropriate.

For example, “Reports” can be combined with any other appropriate term ‘X’ in order to represent a report on subject ‘X’. Post co-ordination restricts the size of the vocabulary thereby facilitating maintenance and use. Boolean searching by either the searcher or the search engine will combine (“post-coordinate”) terms at the time of search.

Under TBITS 39.2 (http://www.cio-dpi.gc.ca/its-nit/standards/tbits39/crit392_e.asp), the Government of Canada Core Subject Thesaurus is the default controlled vocabulary for federal departments. “Default” means that if an alternate, authorized vocabulary is not available, then the Core Subject Thesaurus (CST) must be used as a source of indexing terms.

In any case, it is highly recommended that one or more terms from the CST be applied to <dc.subject>. The reason for this is that the CST has been developed on the basis of a number of indexing projects that extracted broad, high-level terminology used in GOC publications. Therefore, it represents the language generally used in information resources across government. By design, it does not include specialized terminology used in specific and limited disciplines.

Basic rules

Users of the GoC Core Subject Thesaurus should apply the following basic rules to ensure consistency of resource content representation within and across organizations.

1. Use the Thesaurus Relational Structure to Find Descriptors

Browse through the alphabetical display of “lead-in” terms (labelled USE: in the full term display) and indexing terms. Then consult Broader terms (BT:), Narrower terms (NT), and Related terms (RT) attached to each descriptor (indexing term) that appear to exactly or closely represent the concept to be represented in indexing or metadata. These relationships define the meaning of a descriptor, and they suggest other index terms that may be relevant. In addition, the full record for

indexing terms (descriptors) may include Scope notes (SN:) that further elucidate or restrict the meaning of the term for indexing purposes.

2. Choose the Most Specific Descriptor Available

Using “Libraries” as an example, suppose that descriptors (indexing terms) were required for a document dealing with the activities of the National Library of Canada (such as an annual report). In that case, the narrower term “National libraries” is more specific than “Libraries” and should be used instead of “Libraries”.

Note that proper names such as “National Library of Canada” are not included in the thesaurus and may not be used to populate <dc.subject>.

If the document was “about” national museums, libraries, art galleries and the like, then the Broader term “Cultural institutions” might be a better choice. Whichever term is chosen, the full term record for that term should be consulted to ensure that Broader, Narrower or Related terms within those records are not more appropriate.

It is important to bear in mind that a given term record only refers to one level up or down. A given term record does not display the narrower terms of its narrower terms.

3. Choose as Many Descriptors as Needed

Use as many authorized descriptors as needed to fully describe the contents of an information resource. Subject descriptors are not mutually exclusive. More than one subject descriptor will be needed to describe most resources. For example, to index an information resource concerned with the transportation by rail or by truck of toxic waste and other dangerous products will be represented by the following set of descriptors:

- Dangerous products
- Hazardous waste
- Rail transport
- Road transport

4. Entering Descriptors

Enter the authorized descriptor exactly as it appears in the Core Subject Thesaurus. Generally, this means that only the first letter of the first word is capitalized. In English, concrete (countable) nouns are presented in the plural form (e.g. Airports), while collective or abstract nouns are displayed in the singular form. In French, most nouns are presented in the singular form (e.g.

Aéroport). These accepted thesaurus conventions and must be followed to ensure consistent use of terms.

In GOC metadata, separate descriptors with a semi-colon (a semi-colon is used as a separator rather than a comma because a controlled subject term may include other punctuation marks within it). For more information on GOC metadata standards, consult TBS and the Metadata Implementation Guide [LINK required]

One may index using either the English thesaurus (CST) or the French thesaurus (TSB). However, English terms must be applied to English language documents, French terms to French language documents and both English and French terms to bilingual documents. In some cases, there is more than one equivalent term in the other language. For example, the English term "Education" has two equivalents in French, "Éducation" and "Enseignement" which are displayed in the term record separated by a slash ("/") as follows:

Education

FRENCH:

Éducation / Enseignement

The indexer must be careful to select the correct and appropriate term for the French document.

Telemedicine

SN: The use of information and communications technologies to enable health care and health information services activities.

Telehealth is a general, inclusive term referring to a variety of electronic-based health service activities such as actual physician-patient interactions via telemedicine; the provision of education and information services designed to increase awareness of diagnoses, medical conditions, treatments, and good health practices; or clinical decision and diagnostic interactions between health professionals.
