À propos de l'Enquête sur la population active 38-39

COMMENTARY

There was little change in overall labour market conditions in June. The unemployment rate held at 7.0% for the fourth consecutive month while employment remained virtually unchanged (-13,000) in June. In the first half of 2001, employment growth was 0.2%, much slower than the 1.2% pace recorded in the last six months of 2000.

Part-time employment grows in 2001

Employment among men 25 and over rose by 19,000 in June whereas for adult women it was little changed. So far in 2001, employment has continued to increase among adults. However, all of the gains for adults have been in part-time jobs in contrast to the second half of 2000 when the employment gains were full-time.

In June, the average number of hours worked per week held steady at 33.9, down from 34.5 at the start of the year. The decline is consistent with the rise in part-time employment so far in 2001.

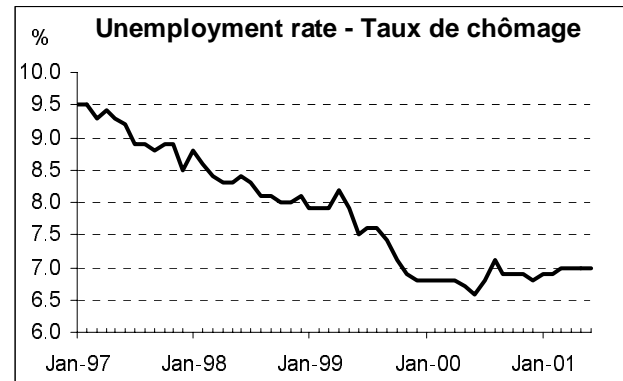

Employment among youths (15 to 24) fell by 26,000, mostly in part-time. Prior to the start of the year, employment among youths had shown an upward trend for about three years, mostly in full-time jobs. While youth employment has declined slightly so far in 2001, their employment level remains 46,000 above that of a year ago.

Summer job market for older students stronger than last year

From May to August, the Labour Force Survey identifies young people aged 15 to 24 who were attending school full-time in March and intended to return to school full-time in the fall. The published estimates are not seasonally adjusted, therefore comparisons can only be made on a year-over-year basis.

COMMENTAIRE

La situation du marché du travail a peu varié en juin. Le taux de chômage s'est maintenu à 7,0 % pour un quatrième mois consécutif alors que l'emploi est demeuré presque inchangé (-13 000) en juin. Dans la première moitié de 2001, la croissance de l'emploi était de 0,2 %, soit un rythme de croissance beaucoup plus lent que celui de 1,2 % observé au cours des six derniers mois de 2000.

L'emploi à temps partiel en hausse en 2001

L'emploi chez les hommes âgés de 25 ans et plus s'est accru de 19 000 en juin alors qu'il a peu varié chez les femmes adultes. Depuis le début de 2001, l'emploi a continué de s'accroître chez les adultes. Cependant, tous leurs gains ont été dans l'emploi à temps partiel contrairement à la seconde moitié de 2000 où leurs gains étaient dans l'emploi à temps plein.

En juin, le nombre moyen d'heures travaillées par semaine s'est maintenu à 33,9; il s'agit toutefois d'une baisse par rapport au début de l'année, le nombre d'heures s'établissant alors à 34,5. Cette diminution va de pair avec l'augmentation dans l'emploi à temps partiel jusqu'à maintenant cette année.

Chez les jeunes (de 15 à 24 ans), le nombre d'emplois a diminué de 26 000 et ce, surtout dans l'emploi à temps partiel. Avant le début de l'année, l'emploi chez les jeunes affichait une croissance à la hausse depuis environ trois ans et ce, principalement dans l'emploi à temps plein. Alors que l'emploi chez les jeunes a baissé légèrement jusqu'à maintenant en 2001, leur niveau d'emploi demeure en hausse de 46 000 par rapport à il y a un an.

Le marché des emplois d'été chez les étudiants plus âgés meilleur que l'an passé

De mai à août, l'Enquête sur la population active identifie les jeunes âgés de 15 à 24 ans qui allaient à l'école à plein temps en mars et qui ont l'intention de retourner aux études à plein temps à l'automne. Les estimations publiées ne sont pas désaisonnalisées, et les comparaisons ne peuvent donc être faites que d'une année à l'autre.

While there has been some recent weakness in youth employment, the summer job market in 2001 seems better than a year earlier. The proportion of all summer students with a job in June was 48.4%, up 0.5 percentage points from June 2000. Over the same period, the unemployment rate edged up to 13.3% (+0.1 percentage points) as a result of an increase in labour force participation.

In June, most of the strength in the summer job market was among older students aged 20 to 24. Their employment rate jumped from 64.1% in June 2000 to 68.6% in June 2001. Over the same period, their unemployment rate dropped 3.6 percentage points to 8.3%.

While the summer job market improved considerably for students in their twenties, teenagers fared less well. The proportion of students aged 15 to 19 who were employed in June was 41.2%, down from 41.8% in June 2000. Over the same period, the teenage unemployment rate for summer students rose by 2.2 percentage points to 16.1%.

The number of employees declines

Despite a slight decline in June (-20,000), the number of employees is up 80,000 from the start of the year. The increase over this period has all been in the private sector (+105,000) while the public sector fell by 25,000.

Although the number of self-employed was little changed in June, it has been on a downward trend since early 2000.

Industry focus

Employment in construction edged up 8,000, bringing gains since last October (when recent strength began) to 52,000. The upward employment trend in construction is in line with this year's strength in the value of building permits.

Employment also edged up in professional, scientific and technical services (+10,000), partially offsetting the decline in May. Employment in this industry has been on an upward trend since 1994.

Employment in manufacturing edged down 11,000, continuing a downward trend that began at the start of 2001. So far this year, employment is down 53,000 (-2.3%). This contrasts sharply with the second half of 2000 when manufacturing employment grew by 55,000. In the first half of 2001, employment declines have been mostly in computer and electronic parts, transportation equipment, wood products and clothing.

Bien qu'il y ait eu une récente faiblesse dans l'emploi chez les jeunes, le marché du travail d'été en 2001 semble malgré tout meilleur qu'il y a un an. La proportion de l'ensemble des étudiants occupant un emploi en juin s'est établie à 48,4 %, en hausse de 0,5 point par rapport à juin 2000. Au cours de la même période, le taux de chômage a légèrement augmenté pour atteindre 13,3 % (+0,1 point) en raison d'une hausse de l'activité sur le marché du travail.

En juin, la vigueur du marché des emplois d'été a principalement profité aux étudiants âgés de 20 à 24 ans. Leur taux d'emploi est passé de 64,1 % en juin 2000 à 68,6 % en juin 2001. Pendant la même période, le taux de chômage de ce groupe d'étudiants a diminué de 3,6 points pour se fixer à 8,3 %.

Si la situation du marché des emplois d'été s'est considérablement améliorée pour les étudiants dans la vingtaine, les adolescents n'ont pas obtenu d'aussi bons résultats. La proportion des étudiants âgés de 15 à 19 ans qui occupaient un emploi en juin s'est établie à 41,2 %, en baisse par rapport à ce qu'elle était un an plus tôt (41,8 %). Au cours de cette période, le taux de chômage de ce groupe d'étudiants sur le marché des emplois d'été s'est accru de 2,2 points pour atteindre 16,1 %.

Diminution du nombre d'employés

Malgré une légère baisse (-20 000) en juin, le nombre d'employés demeure en hausse de 80 000 depuis le début de l'année. La croissance au cours de cette période s'est produite dans le secteur privé (+105 000), l'emploi dans le secteur public ayant fléchi de 25 000.

Bien que le niveau de travailleurs indépendants ait peu varié en juin, il suit une tendance à la baisse amorcée au début de 2000.

Branche d'activité

L'emploi dans la construction a légèrement augmenté (+ 8 000), ce qui porte à 52 000 la croissance du nombre d'emplois depuis octobre dernier (moment où la recrudescence de l'emploi avait commencé). La tendance à la hausse de l'emploi dans la construction va de pair avec la vigueur de la valeur des permis de bâtir cette année.

L'emploi a également légèrement progressé dans les services professionnels, scientifiques et techniques (+10 000), ce qui neutralise partiellement le recul accusé en mai. L'emploi dans cette branche d'activité affiche une tendance à la hausse depuis 1994.

L'emploi dans la fabrication a fléchi de 11 000, poursuivant ainsi une tendance à la baisse amorcée au début de 2001. Le nombre d'emplois a diminué de 53 000 (-2,3 %) depuis le début de l'année. Ces résultats tranchent nettement avec ceux des six derniers mois de 2000, la fabrication ayant enregistré une croissance de 55 000 emplois au cours de cette période. Au premier semestre de 2001, les pertes d'emplois se sont surtout produites dans la fabrication de produits informatiques et électroniques, de matériel de transport, de produits en bois et de vêtements.

In June, employment fell by 6,000 in natural resources, offsetting the increase in May. However, employment in natural resources remains up 11,000 (+4.0%) in the first six months of 2001, mostly in mining, oil and gas extraction.

Provincial focus

In Alberta, employment rose by 8,000 bringing total gains over the first half of 2001 to 28,000 (+1.7%). In June, the unemployment rate edged up 0.1 percentage points to 4.6% as more people were participating in the labour force.

In British Columbia, the estimated level of employment fell by 16,000 following an increase of 13,000 in May. Job losses in June were all part-time. Since the start of the year, employment in the province is down slightly (-15,000 or 0.8%).

In Quebec, an increase in part-time employment (+18,000) offset the decline in full-time. Over the first six months of 2001, overall employment in the province has changed little. Despite no change in employment in June, the unemployment rate edged down 0.2 percentage points to 8.8% as the result of a slight decline in labour force participation.

In Ontario, employment was little changed in June (-8,000). This leaves overall gains in the first half of 2001 at only 16,000, well below the employment increase of 109,000 in the last six months of 2000. In June, the unemployment rate edged up 0.1 percentage points to 6.0%.

Although employment in June was little changed in Newfoundland, gains so far in 2001 total 12,000 (+5.7%). This strong employment growth in the first six months of the year pushed the unemployment rate to 15.2% in June, down 2.5 percentage points from the start of the year.

In Saskatchewan, a decline in labour force participation pushed the unemployment rate down in June to 5.6% (-0.7 percentage points). Although employment was little changed in June, it has declined by 9,000 since the start of the year, continuing a downward trend that began in March 2000.

There was little change in the other provinces in June.

En juin, l'emploi dans le secteur des ressources naturelles s'est contracté de 6 000, neutralisant du coup la hausse enregistrée le mois précédent. Cependant, au cours des six premiers mois de 2001, l'emploi dans les ressources naturelles affiche une progression de 11 000 (+4,0 %), essentiellement dans l'extraction minière et l'extraction de pétrole et de gaz.

Résumé provincial

En Alberta, l'emploi s'est accru de 8 000, hausse qui porte à 28 000 (+1,7 %) la croissance totale de l'emploi au premier semestre de 2001. En juin, le taux de chômage a légèrement augmenté (+0,1 point) pour atteindre 4,6 %, en raison de la croissance de la population active.

En Colombie-Britannique, le niveau estimé de l'emploi a diminué de 16 000 à la suite de l'augmentation de 13 000 relevée en mai. Les pertes observées en juin se sont toutes produites dans l'emploi à temps partiel. L'emploi dans la province est en légère baisse par rapport au début de l'année (-15 000 ou 0,8 %).

Au Québec, l'augmentation de l'emploi à temps partiel (+18 000) a compensé le recul de l'emploi à temps plein. Au cours des six premiers mois de 2001, l'emploi a peu varié dans l'ensemble. Bien que l'emploi soit resté à peu près inchangé en juin, le taux de chômage a baissé de 0,2 point pour se fixer à 8,8 %, en raison d'une légère diminution de l'activité sur le marché du travail.

En Ontario, l'emploi a peu varié en juin (-8 000). Ceci laisse l'emploi en hausse de seulement 16 000 depuis le début de l'année, bien en deçà de l'augmentation de 109 000 obtenu au cours du dernier semestre de 2000. En juin, le taux de chômage a légèrement augmenté de 0,1 point pour s'établir à 6,0 %.

À Terre-Neuve, bien que l'emploi soit resté à peu près inchangé en juin, il a enregistré, depuis le début de l'année, une hausse de 12 000 (+5,7 %). Cette forte croissance de l'emploi au premier semestre de 2001 a fait passer le taux de chômage à 15,2 % en juin, soit une baisse de 2,5 points comparativement au taux obtenu au début de l'année.

En Saskatchewan, la diminution de l'activité sur le marché du travail a fait baisser le taux de chômage à 5,6 % (-0,7 point). Bien qu'il ait peu bougé en juin, l'emploi a baissé de 9 000 depuis le début de l'année poursuivant une tendance à la baisse qui a commencé en mars 2000.

Il y a eu peu de variation dans les autres provinces en juin.

Notes to readers

1. The 2000 Labour force historical review on CD-ROM

This annual product is a comprehensive database of Labour Force Survey estimates, containing thousands of cross-classified data series and spanning more than two decades from 1976 to 2000. Monthly and annual average series are available on a wide range of subjects, including labour force status by demographic, education and family characteristics, trends in the labour markets of metropolitan areas, economic regions, industry and occupation estimates and much more.

The 2000 *Labour force historical review* (71F0004XCB, \$195) is available. LAN and bulk prices are available on request. For more information, contact Marc Lévesque (613-951-2793), or refer to Statistics Canada's Web site www.statcan.ca/english/ads/71F0004XCB/index.htm. To order this edition, contact your nearest Statistics Canada Regional Reference Centre or e-mail to order@statcan.ca.

2. Occupational coding

Harmonization with Census occupation concepts has affected the comparability of current LFS occupation data through time. The change was phased in January 1999 to June 1999. The management group was most affected, with a portion of those formerly classified as managers now most likely coded to business, finance and administrative and sales and service occupations.

3. Labour Force Survey Products and Services, 2000-2001

Labour Force Survey Products and Services, 2000-2001 is a catalogue which describes all Labour Force Survey products and services offered on a monthly, annual and occasional basis. For a paper or electronic copy, please contact Jacques Ouellet at (613) 951-4168; e-mail jacques.ouellet@statcan.ca or by fax at (613) 951-2869.

4. Access information from the Internet

Commentary and key Labour Force Survey estimates are available at 7 a.m. on the Internet. Check us out at www.statcan.ca, select "Daily News".

This full publication is also available in electronic format on the Statistics Canada website. It is accessible by 7 a.m. the day of release. The catalogue number is

Notes aux lecteurs

1. Le CD-ROM 2000 de la Revue chronologique de la population active

Ce produit annuel constitue une base de données détaillée contenant les estimations de l'Enquête sur la population active, offrant des milliers de séries croisées portant sur plus de deux décennies (1976 à 2000). Les séries mensuelles et annuelles portent sur un éventail de sujets, incluant l'activité sur le marché du travail selon les caractéristiques démographiques, le niveau de scolarité et les caractéristiques familiales, les tendances sur le marché du travail des régions métropolitaines et des régions économiques, des estimations selon les industries et les professions et encore davantage.

Le CD-ROM de la *Revue chronologique de la population active, 2000* (71F0004XCB, 195 \$) est en vente. Des prix de réseau et de gros sont disponibles sur demande. Pour plus de renseignements, communiquez avec Marc Lévesque au (613) 951-2793 ou consultez le site Web de Statistique Canada : www.statcan.ca/francais/ads/71F0004XCB/index_f.htm. Pour commander cette nouvelle édition, communiquez avec votre centre de consultation régional de Statistique Canada ou commandez simplement par courrier électronique (order@statcan.ca).

2. Codification des professions

L'harmonisation aux concepts des professions du Recensement a affecté la comparabilité dans le temps des données courantes selon la profession de l'EPA. Ce changement a été implanté de janvier 1999 à juin 1999. Le groupe de la «gestion» a été le plus touché, alors qu'une portion des travailleurs auparavant classés dans la gestion sont maintenant codés le plus vraisemblablement dans les catégories «affaires, finance et administration» et «ventes et services».

3. Produits et services de l'Enquête sur la population active, 2000-2001

«Produits et services de l'Enquête sur la population active, 2000-2001» est un catalogue qui décrit brièvement les produits de l'Enquête sur la population active offerts une fois par mois, une fois par année ou à l'occasion. Pour une copie papier ou électronique, communiquer avec Jacques Ouellet au (613) 951-4168; courriel jacques.ouellet@statcan.ca ou par télécopieur au (613) 951-2869.

4. Ayez accès à l'information sur l'Internet

Le commentaire et les estimations clés de l'enquête sur la population active sont disponibles à 7 h sur Internet. Venez nous visiter à l'adresse www.statcan.ca sous la rubrique «Nouvelles du Quotidien».

Cette publication est maintenant disponible en format électronique sur le site web de Statistique Canada. Elle est accessible à 7 h le jour même de la diffusion. Le numéro de catalogue est

71-001-PIB and can be retrieved from www.statcan.ca, select "Products and Services, Downloadable Publications (\$)", and then "Labour".

Note de reconnaissance

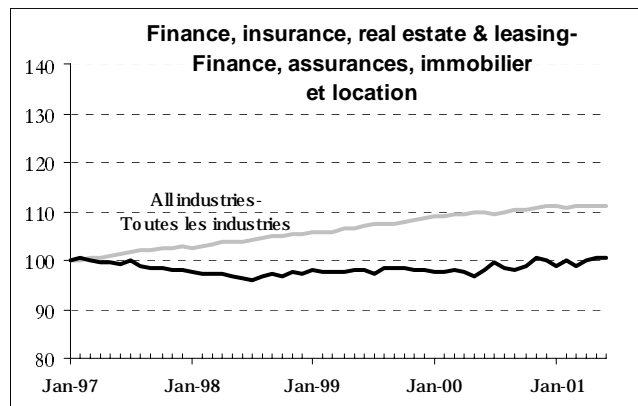

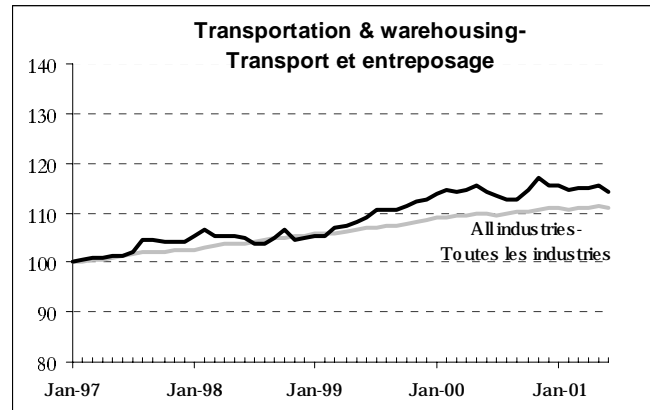

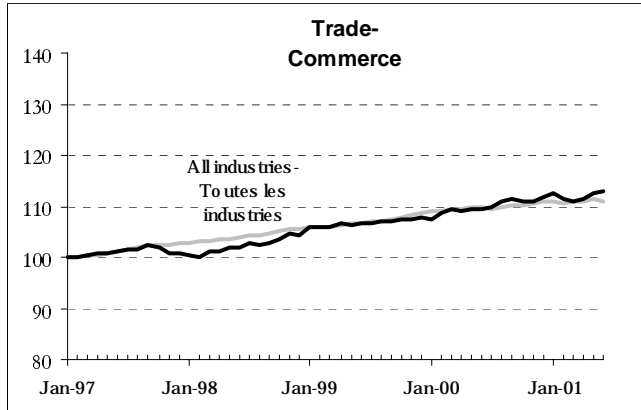

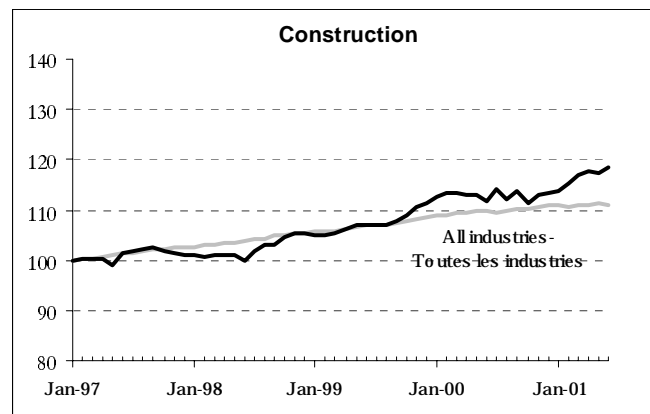

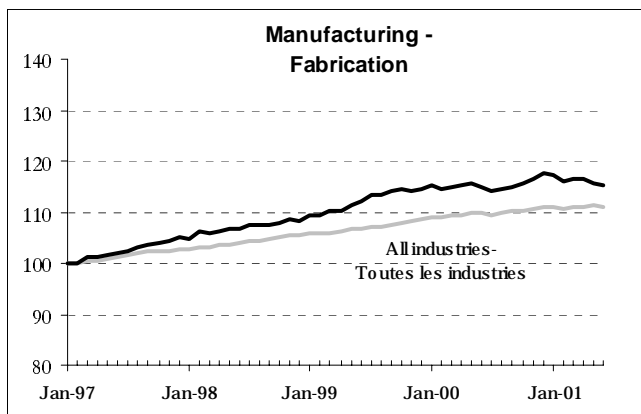

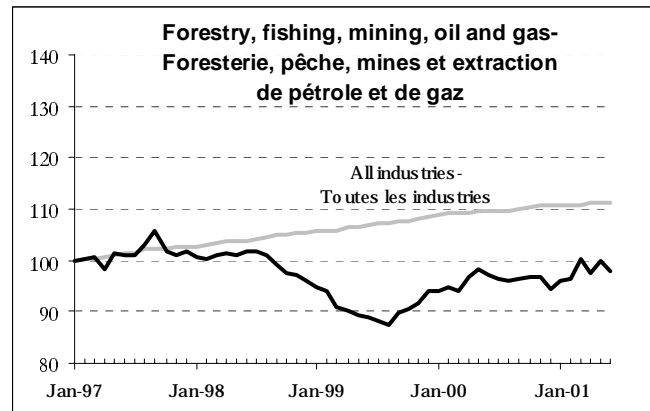

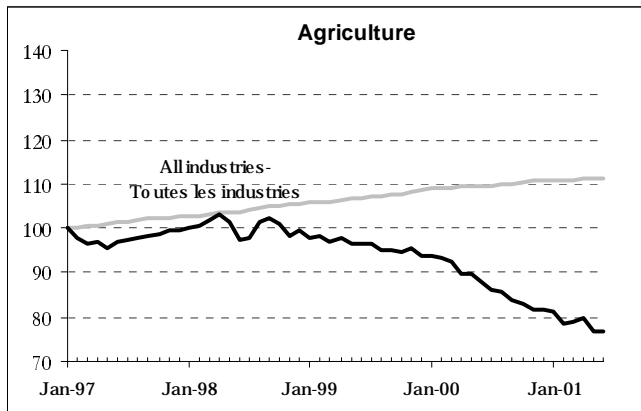

Le succès du système statistique du Canada repose sur un partenariat bien établi entre Statistique Canada et la population, les entreprises, les administrations canadiennes et les autres organismes. Sans cette collaboration et cette bonne volonté, il serait impossible de produire des statistiques précises et actuelles.

| 29. St. Catharines | 6.5 | | |
| 30. London | 6.3 | | |

¹ These unemployment rates have been determined using a transition formula prescribed in the EIR regulations. For further information, see: <http://www.hrdc-dhc.gc.ca/common/news/insur/00-61s.html> for Bas-Saint-Laurent/Côte-Nord or ".../00-62.s.html" for Madawaska-Charlotte.

¹ Ces taux de chômage ont été déterminés en utilisant une formule de transition prescrite dans les Règlements sur l'Assurance-emploi. Pour plus d'information, voir : <http://www.hrdc-dhc.gc.ca/common/news/insur/00-61s.html> pour Bas-Saint-Laurent/Côte-Nord ou ".../00-62.s.html" pour Madawaska-Charlotte.

² Since the Labour Force Survey is not conducted in the Yukon, Northwest Territories and Nunavut, the rate for regions 56, 57 and 58 is provided by Human Resources Development Canada and not by Statistics Canada.

² L'enquête n'étant pas menée au Yukon, dans les Territoires du Nord-Ouest et au Nunavut, le taux pour les régions 56, 57 et 58 est fourni par Développement des ressources humaines Canada et non par Statistique Canada.

Note: For geographic descriptions and maps of Employment Insurance Regions, see the Human Resources Development Canada website: http://www.hrdc-dhc.gc.ca/ae-ei/reg-econ/5_1.es.html.

Nota: Pour les cartes des Régions du régime d'assurance-emploi, voir le site web de Développement des ressources humaines Canada : http://www.hrdc-dhc.gc.ca/ae-ei/reg-econ/5_1.f.s.html.

 Les autres personnes sont les jeunes de 15 à 24 ans qui ne sont pas inclus dans la population étudiante.

About the Labour Force Survey

The statistics contained in this report are based on information obtained through a sample survey of 52,000 representative households across the country. The Labour Force Survey, started in November 1945, was taken at quarterly intervals until November 1952. It has been carried out monthly since then. The information generated by the survey has expanded considerably over the years with a major redesign of the survey content in 1976 and again in 1997, and provides a rich and detailed picture of the Canadian labour market. Details of these changes are available on request from the Labour Force Survey Program, Statistics Canada, Ottawa, K1A 0T6.

The sample used in the Labour Force Survey has been designed to represent all persons in the population 15 years of age and over residing in the provinces of Canada, with the exception of the following: persons living on Indian reserves, full-time members of the armed forces and people living in institutions (for example, inmates of penal institutions and patients in hospitals or nursing homes who have resided in the institution for more than 6 months). Monthly estimates of employment, unemployment and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

For detailed information on the LFS data collection, methodology and content see the document *Guide to the Labour Force Survey* (Catalogue no. 71-543-GIE) on the Statistics Canada web site at www.statcan.ca/english/concepts/labour/index.htm.

Definitions and Explanations

The **labour force** is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed persons are those who, during the reference week:

- a) did any work at all
- b) had a job but were not at work

A person is considered to be **full-time** if his/her usual hours at the main job are greater than 29 hours per week. When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be **part-time**.

Unemployed persons are those who, during the reference week:

- a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work;
- b) had not actively looked for work in the past four weeks but were on temporary layoff and were available for work;
- c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed are classified as **not in the labour force**.

À propos de l'Enquête sur la population active

Les statistiques publiées ici sont fondées sur une enquête mensuelle menée auprès d'environ 52 000 ménages représentatifs d'un bout à l'autre du Canada. L'enquête sur la population active, lancée en novembre 1945, a eu lieu tous les trois mois jusqu'à novembre 1952. Depuis lors, elle a lieu tous les mois. L'information générée par l'enquête s'est considérablement accrue au cours des années grâce à un remaniement majeur de l'enquête en 1976, suivi d'un autre en 1997, et fournit une image riche et détaillée du marché du travail canadien. On peut obtenir des détails sur ces changements en s'adressant au Programme de l'enquête sur la population active, Statistique Canada, Ottawa, K1A 0T6.

L'échantillon retenu aux fins de l'enquête sur la population active représente toutes les personnes de 15 ans et plus résidant dans les provinces du Canada, à l'exception des personnes vivant dans des réserves indiennes, des membres à plein temps des Forces armées et des pensionnaires d'institutions (par exemple les détenus de prison et les malades séjournant à l'hôpital ou dans une maison de repos pour plus de 6 mois). Les estimations mensuelles de l'emploi, du chômage et des inactifs se rapportent à une semaine bien précise chaque mois, soit normalement celle où tombe le quinzième jour du mois.

Des renseignements détaillés sur la collecte de données, la méthodologie et le contenu de l'EPA sont contenus dans le document *Guide de l'Enquête sur la population active* (n° 71-534-GIF au catalogue) dans le site web de Statistique Canada www.statcan.ca/francais/concepts/labour/index_f.htm.

Définitions et explications

La **population active** comprend les membres de la population civile hors institution âgés de 15 ans et plus qui avaient un emploi (personnes occupées) ou étaient en chômage pendant la semaine de référence.

Les **personnes occupées** sont celles qui, au cours de la semaine de référence:

- a) ont fait un travail quelconque
- b) avaient un emploi mais n'étaient pas au travail

Une personne est considérée à **temps plein** si elle travaille habituellement plus de 29 heures par semaine à son emploi principal. Une personne est considérée à **temps partiel** si elle travaille habituellement moins de 30 heures par semaine à son emploi principal.

Les chômeurs sont les personnes qui, au cours de la semaine de référence:

- a) étaient sans emploi, avaient activement cherché du travail au cours des quatre dernières semaines (y compris la semaine de référence) et étaient prêtes à travailler;
- b) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais étaient temporairement mises à pied et étaient prêtes à travailler;
- c) n'avaient pas activement cherché de travail au cours des quatre dernières semaines, mais devaient commencer un nouvel emploi dans quatre semaines ou moins à compter de la semaine de référence, et étaient prêtes à travailler.

La partie de la population civile hors institution âgée de 15 ans et plus qui était ni occupée ni en chômage pendant la semaine de référence est classée comme **inactive**.

The **unemployment rate** represents the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

The **participation rate** represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, etc.) is the labour force in that group expressed as a percentage of the population for that group.

The **employment rate (formerly the employment/population ratio)** represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, etc.) is the number employed in that group expressed as a percentage of the population for that group.

The **part-time rate** represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. The seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

Sampling Error

Estimates in this publication are based on the Labour Force Survey, a monthly survey of 52,000 households across Canada. Because they are based on a sample survey, the estimates are subject to sampling error. Changes in the level of any estimates between two months can be the result of a true change or sampling variability. In most tables in this publication an indicator of the sampling error is provided. Two thirds of the time, a change greater than the sampling error indicates a real change. Movements in estimates that are smaller than the sampling error are less likely to reflect a real change and more likely to be due to sampling variability. While the above is true for monthly movements, one can have more confidence in a series of consecutive movements in the same direction, even though some of the monthly movements may be smaller than the sampling error.

For comprehensive information on Labour Force Survey methodology, see the publication *Methodology of the Canadian Labour Force Survey*, catalogue no. 71-526-XPB.

Le **taux de chômage** représente le nombre de chômeurs exprimé en pourcentage de la population active. Le taux de chômage d'un groupe particulier (âge, sexe, etc.) est le nombre de chômeurs dans ce groupe, exprimé en pourcentage de la population active dans le même groupe.

Le **taux d'activité** représente la population active exprimée en pourcentage de la population de 15 ans et plus. Le taux d'activité d'un groupe particulier (âge, sexe, etc.) est la population active dans ce groupe exprimée en pourcentage de la population dans le même groupe.

Le **taux d'emploi (antérieurement nommé rapport emploi-population)** représente le nombre de personnes occupées exprimé en pourcentage de la population de 15 ans et plus. Le taux d'emploi d'un groupe particulier (âge, sexe, etc.) est le nombre de personnes occupées dans ce groupe, exprimé en pourcentage de la population dans le même groupe.

Le **taux de temps partiel** représente le nombre de personnes occupées à temps partiel exprimé en pourcentage du nombre de personnes occupées. Le taux de temps partiel d'un groupe particulier (âge, sexe, etc.) est le nombre de personnes occupées à temps partiel dans ce groupe, exprimé en pourcentage du nombre de personnes occupées dans le même groupe.

Désaisonnalisation

Les fluctuations des séries chronologiques économiques sont causées par des mouvements saisonniers, cycliques et irréguliers. Une série désaisonnalisée est une série dont on a éliminé les effets des mouvements saisonniers. Ces derniers sont causés par des événements annuels réguliers comme les changements de température, les vacances, les cycles agricoles, de productions et de ventes au détail durant la période de Noël et de Pâques. La série désaisonnalisée contient à la fois des fluctuations irrégulières et des fluctuations cycliques à long terme.

Les données désaisonnalisées sont révisées chaque année afin de tenir compte des données courantes et produire des coefficients d'extrapolation prospective pour les 12 prochains mois. Les données d'extrapolation prospective seront l'objet de légères révisions dans les éditions ultérieures de la présente publication.

Erreur d'échantillonnage

Les estimations contenues dans cette publication sont basées sur l'Enquête sur la population active, une enquête mensuelle de 52 000 ménages à travers le Canada. Étant donné qu'elles reposent sur une enquête par échantillon, ces estimations sont sujettes à des erreurs d'échantillonnage. Le changement dans le niveau d'une estimation entre deux mois peut donc être le résultat d'un changement réel ou d'une variation d'échantillonnage. Un indicateur de l'erreur d'échantillonnage est inclus dans la plupart des tableaux de cette publication. Deux fois sur trois, un changement plus grand que l'erreur d'échantillonnage indique un changement réel. Des variations moins élevées que l'erreur d'échantillonnage sont moins susceptibles de montrer des changements réels que des variations dues à l'échantillonnage. On peut avoir davantage confiance dans un ensemble de mouvements consécutifs dans la même direction, même si certains de ces mouvements sont plus petits que l'erreur d'échantillonnage.

Pour des renseignements plus complets sur la méthodologie de l'Enquête sur la Population Active, voir la publication *Méthodologie de l'enquête sur la population active*, n° 71-526-XPB au catalogue.
