Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

National balance sheet accounts - highlights

First quarter 2006

Growth in national net worth slows

National net worth reached \$4.6 trillion by the end of the first quarter, or \$141,000 per person. The gain in net worth resulted from an increase in national wealth (economy-wide non-financial assets) in addition to a decrease in net foreign debt. Growth in national net worth slowed to 1.4% in the first quarter, less than the average of 1.7% for the previous ten quarters. National saving edged down with a reduction in the national saving rate. Saving grew in the personal sector while slowing for government and corporations.

Growth in national wealth decelerated (+0.9%) in the first quarter. While reduced, the increase in residential real estate continued to be the major contributor to this growth. It accounted for more than half of the increase in national wealth in the quarter. Increases in other non-financial assets including machinery and equipment contributed further to the gain in overall wealth.

Growth in national net worth slows

% change, not seasonally adjusted

Note to readers

The national balance sheet accounts are statements of the balance sheets of all of the various sectors of the economy. They consist of the non-financial assets owned in the various sectors of the economy and of financial claims outstanding. National wealth is the sum of non-financial assets - produced assets, land surrounding structures and agricultural land - in all sectors of the economy. National net worth is national wealth less net foreign liabilities (i.e., what is owed to non-residents less what non-residents owe to Canadians). Alternatively, it is the sum of the net worth of persons, corporations and governments.

National saving is the sum of saving of persons, corporations and governments. National saving and investment contribute to change in national net worth. The revaluation of assets and liabilities is also responsible for changes in national net worth. The causes of revaluation include changes in share prices, interest rates, exchange rates and loan allowances. For more information on national saving and the relationship between saving in the different sectors of the economy, see the publication *Trends in Saving and Net Lending in the National Accounts*, no. 49 (13-604-MIE, free).

Quarterly series run from the first quarter of 1990. Market value estimates have been available since June 2004. For more information, consult [Balance sheet estimates at market value](#).

Users should note that revisions to the National Balance Sheet Accounts extend beyond the typical 4-year revision period, in some cases back to 1990. The principal reason for this is that the market value estimates (that currently run from first quarter 1990) will be extended back to 1970 at the time of the second quarter. This has necessitated a limited amount of historical revision to book value estimates of stocks and bonds, in order to ensure consistency between the book value data and the forthcoming market value series. There are a few other changes that run beyond the 4-year revision period. In particular, there are revisions to deposits and loans, largely reflecting the incorporation of the foreign chartered bank branches. The Canada Pension Plan data have also been revised back to 2000, reflecting improved data and detail.

Canadians' net indebtedness to non-residents (the amounts owing to non-residents less the foreign assets held by Canadians) decreased in the first quarter. Growth in Canadian assets abroad, particularly portfolio investments, exceeded the growth in Canadian liabilities to non-residents. Canadian liabilities to non-residents increased, largely due to the increased value of their holdings of Canadian equities.

Household net worth gains continue to be driven by equities and real estate

Gains in the market value of equities were the largest contributor to the change in household net worth. With stock market indexes at record levels, advances in the price of equities helped boost the value of personal sector share and investment fund holdings and pension assets. Increases in the value of residential real estate made a significant contribution to the change in household net worth, incorporating the effects of a long sustained housing boom. The personal saving rate increased to 1.9%, exceeding the annual rate for 2005 of 1.2%, which helped also contribute to a healthy increase in net worth.

Increases in household assets, however, were partially offset by expanded liabilities. Households' appetite for debt grew as demand for consumer credit and mortgage funds edged up from the previous quarter. However, the increase in personal disposal income more than offset the increase in household debt, resulting in a debt to income ratio of 108.2 percent in the first quarter, down marginally from the fourth quarter. Canadian households carry about \$1.08 in debt, for every dollar of their disposable income. Given the strong growth in household net worth, the ratio of household debt to net worth fell to 17.7% in the quarter.

Household leverage eases

As a % of net worth, not seasonally adjusted data

Corporations' debt advances

An increased reliance on borrowed funds in the first quarter was reflected in the levelling off of the non-financial private corporation debt-to-equity (at book value) ratio. Corporations had about 59 cents of debt for every dollar of equity at the end of the first quarter. Corporate leverage has been on a downward trend since 1991.

Government debt-to-GDP at twenty year low

Government net debt (total liabilities less total financial assets) edged down as the government sector registered another surplus in the first quarter, albeit a smaller surplus than the previous quarter. Net government debt as a percentage of GDP declined further to 47.2%, extending a trend of lows last seen twenty year ago when net debt represented roughly half of GDP.

Concepts, methodology, data quality

The following information should be used to ensure a clear understanding of the basic concepts that define the data provided in this product, of the underlying methodology, and of aspects of data quality. This information will provide users with a better understanding of the strengths and limitations of the data, and how they can be effectively used and analysed.

Concepts and variables measured

The **National Balance Sheet Accounts** (NBSA) are statements of the non-financial assets owned/used in the sectors of the economy and of the financial claims outstanding among the economic units in the sectors in the economy. They consist of the **National Balance Sheet** for the nation as a whole, as well as the underlying sector balance sheets.

At the core of the NBSA are assets and liabilities and the concept of wealth, or net worth. In nominal terms, wealth accumulates as the result of: economic and financial activity in the **Income and Expenditure Accounts** and **Financial Flow Accounts**, respectively; and, changes in the prices of assets and liabilities.

Sector Balance Sheets

The NBSA is an integrated set of balance sheets -- non-financial assets, financial assets, liabilities and net worth -- for the sectors of the economy. This comprises four major sectors of the economy: persons and unincorporated businesses, corporations, governments and non-residents. The non-resident sector is the detail on Canada's International Investment position. The corporate sector is broken down into a number of sub-sectors with the bulk of this detail comprising the balance sheets of the financial institutions, reflecting the importance of the financial system. The government sector assets and liabilities are available by level of government. In total, there are 30 unique sectors in the NBSA. Financial instruments covered include deposits, bonds, shares, short-term paper, trade accounts, consumer credit, mortgages etc. Users can access credit market debt of the sectors, gross and net debt of government sectors, the structure of household net worth, the composition of the assets of the large institutional investors to name some uses.

National wealth; National net worth

Sector balance sheets excluding the non-resident sector can be aggregated to produce the **National Balance Sheet** (NBS). **National Wealth** is defined as the sum of the non-financial assets in the economy. The standard measure is comprised of produced assets (residential structures, non-residential structures, machinery and equipment, consumer durable goods, inventories) and land. A broader measure of wealth is produced annually which includes the value of natural resources -- specifically, timber and major deposits of subsoil assets.

National economies are either net creditor or net debtors, with respect to their financial position vis-à-vis the rest of the world. **National Wealth** adjusted for the net international investment position yields **National Net Worth**, and this measure is equivalent to net worth on the NBS.

Coverage

All traditional assets and liabilities are in scope. Major natural resources are measured, but for certain others (e.g., diamonds, fish stocks) estimates are yet to be developed. NBSA currently excludes certain intangible assets, such as research and development. Human capital is currently out of scope.

Valuation

Data are measured in current dollars, though constant dollar estimates of certain components of **National Wealth** will soon be available.

There are two sets of current dollar NBSA data which are published -- a set at book values (published at the detailed sector level) and a set at market values (published at the 4 sector level with the corporate sector split between non-financial and financial corporations). Non-financial assets are at current values, in both sets. In the market value NBSA, only tradable securities (assets and liabilities) are estimated at market values.

Data sources and methodology

The NBSA measure financial positions on a quarterly basis and relies heavily on a wealth of information from various areas of Statistics Canada.

Sources

A very large amount of information from various survey divisions within the bureau, along with other data, are compiled, integrated and analysed as part of the process of producing balance sheet estimates for the Canadian economy.

Major suppliers of data within Statistics Canada include Agriculture Division, Investment and Capital Stock Division, Income Statistics Division, Balance of Payments Division, Industrial Organization and Finance Division, Public Institutions Division. There are also a number of external and administrative sources of data used.

General methodology

Assets and liabilities, by detailed categories, are compiled for the major sectors of the economy. Data are analysed for time series consistency, links to current economic events, issues arising from the source data, and finally with respect to coherence. Estimates are reconciled with data in the *Income and Expenditure Accounts* and *Financial Flow Accounts*.

For further details on definitions, concepts, sources and methods, please refer to [Financial Flow and National Balance Sheet Accounts – Concepts, Definitions, Sources and Methods](#), catalogue no. 13-563E.

Seasonal adjustment

Quarterly NBSA data series are largely unadjusted for seasonal variation. However, selected quarterly aggregate data series are available on a seasonally-adjusted basis.

Revisions

Statistical revisions are carried out in order to incorporate the most recent information from quarterly and annual surveys, taxation statistics, public accounts, censuses, etc.

Estimates for each quarter are revised when those for subsequent quarters of the same year are published and when those for the first quarter of each of the next four years are published. They are not normally revised again except when historical revisions are carried out, usually once per decade. However, the conversion of the NBSA to quarterly frequency (2003) and incorporation of market value estimates (2004) have resulted in the accounts being open back to 1990 at the time of the first quarter in June of 2003 and 2004.

Reference period

Data are released approximately 75 days after the reference period.

Data quality (accuracy)

No direct measures of the margin of error in the estimates can be calculated. The quality of the estimates can be inferred from analysis of revisions and from a subjective assessment of the data sources and methodology used in the preparation of the estimates.

Comparability of data and related sources

It is not possible to produce an equivalent to the National Wealth or National Net worth; nor is it possible to construct a balance sheet for the household sector, except periodically from household surveys. However, certain sub-sectors of the NBSA are largely comparable to estimates produced by source data divisions (e.g., pension funds, levels of government).
