Introduction

This document presents historical tables displaying Federal Government expenditures and personnel applied to activities in science and technology (S&T). S&T can be divided into research and development (R&D) and related scientific activities (RSA) expenditures. Expenditures and personnel for each fiscal year to 2000-2001 are actual while the data for 2001-2002 and 2002-2003 are forecasts and estimates respectively.

As the data are designed primarily for use by those with some knowledge of the government's scientific activities, a minimum of explanatory material accompanies the statistics.

This report is organized into four main sections of statistical data. The first section presents combined data on the natural and social sciences, the second, data on the natural sciences alone, the third, data on the social sciences alone and the fourth, data on personnel. The note to readers contains definitions of the terms used to categorize science expenditures as well as some notes on the limitations of the data. **Readers are urged to read this latter section before drawing their own conclusions from the data.**

This working paper is a supplement to the service bulletin "Science Statistics", Vol. 26 No. 5, Catalogue 88-001-XIB and the annual publication "Federal Scientific Activities 2002-2003", Catalogue No. 88-204-XIE.

Highlights

- The Federal Government planned to spend \$7.7 billion on scientific and technological activities for the estimate year 2002-2003, an increase of 3.0% over forecasted expenditures on S&T for 2001-2002.
- The central activity of S&T is scientific research and experimental development. In 2002-2003, the Federal Government is expected to spend \$5.1 billion on R&D. This includes both intramural performance and extramural funding of R&D.
- Activities in the natural sciences and engineering (NSE) will receive the bulk of Federal Government funding (78% in 2002-2003), most of which (79%) is for research and development.
- Most of the monies (80%) for the social sciences and humanities (SSH) will be spent on related scientific activities such as data collection, information services and special services and studies. Statistics Canada alone accounted for 37% of these expenditures.
- In 2002-2003, 32,335 person-years were involved in federal S&T activities, a 1.1% decrease from 2001-2002. Fifty-three percent, or 17,048 person-years, were engaged in RSA activities.

This report was prepared by Bev Watier under the direction of Lloyd Lizotte, Subject Matter Manager, Governments Sector, Science and Innovation Survey Section, Science, Innovation and Electronic Information Division.

NOTES TO READERS

SCOPE AND LIMITATIONS OF THE DATA

The expenditure data for scientific activities controlled by federal departments and agencies provided in this document correspond to the budgetary expenditures by program presented in Main Estimates for the approval of Parliament. As a consequence, the following types of costs or expenditures are not included:

- Expenditures by federal agencies which do not receive budgetary appropriations, e.g., Petrocan, Canadian National Railways, Air Canada.
- Non-budgetary expenditures for advances, loans, etc.

DEFINITIONS

Federal departments and agencies in receipt of budgetary appropriations are requested to identify those resources reported in Main Estimates which are to be used in scientific and technological (S&T) activities in both natural and social sciences.

The definitions used in collecting the data for this report are essentially the same as those used by the OECD in its "Frascati Manual" and by UNESCO in its "Manual for Statistics on Scientific and Technological Activities".

NATURAL AND SOCIAL SCIENCES

The term, natural sciences, embraces those disciplines of study concerned with understanding, exploring, developing or utilizing the natural world. It covers the physical sciences, the life sciences, including the medical and agricultural sciences and engineering.

The term, social sciences, is to be regarded as synonymous with social sciences and humanities. Thus it embraces all disciplines involved in the study of human actions and conditions and the social, economic and institutional mechanisms affecting humans. Included are such disciplines as anthropology, demography, economics, geography, history, languages, literature and linguistics, law, library science, philosophy, political science, psychology, religious studies, social work, sociology, and urban and regional studies.

In some situations it may be difficult to decide whether an activity falls in the domain of the natural or social sciences. Nevertheless, an assignment must be made, and respondents are asked to consider the dominant orientation of the work and the nature of the expertise of the work and of the personnel involved.

SCIENTIFIC AND TECHNOLOGICAL ACTIVITIES

There are two main categories of scientific and technological activities;

- Scientific research and experimental development (R&D) is defined as creative work undertaken on a systematic basis in order to increase the stock of knowledge, including the knowledge of humans, their culture and society, and the use of this stock of knowledge to devise new applications.
- Related scientific activities (RSA) are defined as those activities which complement and extend R&D by contributing to the generation, dissemination and application of scientific and technological knowledge. Enumerated below are the sub-groupings of related scientific activities divided by field of science.

Natural Sciences

Scientific data collection
Information services
Special services and studies
Education support

Social Sciences

General purpose data collection
Information services
Special services and studies
Education support

INTRAMURAL AND EXTRAMURAL PERFORMANCE

Intramural S&T is defined as those activities carried out primarily by the federal government. Considered to be intramural are those activities or services provided by outside agencies but directly controlled and managed by in-house personnel. Examples include computer services, provision of ship and plane services, construction of laboratory, test or prototype equipment. Intramural also includes those activities performed by one federal government department or agency on behalf of another on a cost recovery basis.

An activity is considered to be extramurally performed if the management as well as the performance is entrusted to a non-federal organization. The six extramural performing sectors are: Canadian business enterprises, Higher education, Canadian non-profit institutions, Canadian provincial and municipal governments, Foreign performers, and Other performers.

Intramural performance includes:

- scientific activities carried out by personnel of units assigned to the program;
- the acquisition of land, buildings, machinery and equipment for scientific activities;
- the administration of scientific activities by program employees;
- the purchase of support services such as EDP and travel.

The intramural expenditures reported for scientific activities are those direct costs associated with scientific programs. These costs include that portion of a program's contribution to employee benefit plans (e.g., superannuation) which is applicable to the scientific manpower within the program. Non-program ("indirect") costs, such as the value of services provided by other departments without charge and accommodation provided by the reporting program are included.

Extramural performers include:

Canadian business enterprises - business and government enterprises including public utilities and government-owned firms. Incorporated consultants who provide scientific and engineering services are also included. Industrial research institutes located at Canadian universities are considered to be in the university sector.

Higher education - including affiliated institutes owned, administered or staffed by universities.

Canadian non-profit institutions - charitable foundations, voluntary health organizations, scientific and professional societies, and other organizations not established to earn profits. Non-profit institutions primarily serving or controlled by another sector are included in that sector (e.g. The Pulp and Paper Research Institute is considered to be part of the Canadian Business Enterprises sector).

Canadian provincial and municipal governments - departments and agencies of provincial and municipal governments. However, provincial utilities are included in the Canadian Business Enterprises sector.

Foreign performers - all foreign governments, foreign companies (including foreign subsidiaries of Canadian firms), international organizations, non-resident foreign nationals and Canadians studying or teaching abroad.

Other performers - individuals or organizations not belonging to any of the above sectors. This includes provincial research councils and organizations.

CONTRACTS, GRANTS AND CONTRIBUTIONS

The federal government uses three methods of funding extramurally-performed S&T activities:

A contract is a legal agreement between two or more parties which will usually specify the nature and general objective of the S&T activity to be performed and the provision of the service according to an agreed schedule and cost

A grant is an unconditional payment for which service is not necessarily expected (information, goods, etc.). It is to be noted, however, that prospective recipients may have to satisfy certain eligibility requirements.

A contribution is an agreement between the recipient which specifies the terms and conditions under which funds will be paid. The payments are conditional upon performance or achievement and the recipients use of the funds is subject to audit.

In this report the term "grants" encompasses both grants and contributions. Data subdivided by type of funding are collected only for R&D activities.

PERSONNEL

Federal Employees: "permanent", temporary and casual staff of all departments and agencies of the Federal Government, as well as the Canadian Nuclear Safety Commission, Atomic Energy of Canada Limited, Canada Mortgage and Housing Corporation, Canadian Broadcasting Corporation, the Canadian Human Rights Commission, the Canadian International Development Agency, the Commissioner of Official Languages, the International Development Research Centre, the International Joint Commission, the Law Reform Commission of Canada, the Medical Research Council of Canada, the National Capital Commission, the National Energy Board, the National Film Board, the National Library of Canada, the National Museums of Canada, the National Research Council Canada, the Natural Sciences and Engineering Research Council of Canada, the Privy Council Office, the National Archives of Canada, the Public Service Commission of Canada, the Royal Canadian Mounted Police, and the Social Sciences and Humanities Research Council of Canada.

Person-years: a measure of the time actually devoted to the conduct of scientific activities. An employee who is engaged in scientific activities for about four months (e.g. a summer term employee), or one who works about a third of the time on scientific activities, would have a person-year equivalence of 0.3.

Scientific and Professional: groups engaged in the application of a comprehensive body of knowledge acquired through university graduation or groups in which membership in Canada is generally controlled by legal licensing bodies.

Administrative and Foreign Service: groups engaged in the planning, execution, conduct and control of programs serving the public interest, relations between Canada and other countries and the requirements of internal management in the Public Service of Canada.

Technical: groups engaged in the conduct of analytical, experimental and investigative duties in all the sciences and the performance of similar technical duties in which the requisite knowledge and skills are normally acquired through completion of secondary school education and specialized training.

Administrative Support: groups such as clerical and regulatory; communications; data processing; office equipment operation; secretarial, stenographic, typing, and telephone operation.

Operational: groups engaged in the performance of a craft or of unskilled work. It refers to groups such as correctional, general services, postal operations, and printing operations.

From 1996-97 data on personnel resources have been compressed from seven to three principal categories. Scientific and Professional includes Executive; Technical; and Administrative Support includes Administrative and Foreign Service, Operational and Military.

Footnotes:

¹ Formerly known as Federal Office of Regional Development – Québec (FORD).

² The Government reorganization transferred the Canadian Parks Services to the Department of Canadian Heritage in 1994-95. Parks Canada was established as a agency of the federal government by an Act of Parliament in December 1998.

³ Figures for Industry Canada, 1993-94 reflect the reorganization of Industry, Science and Technology Canada and program components of Communications, Consumer and Corporate Affairs and Investment Canada.

⁴ The Government reorganization in 1994-95 amalgamated the departments of Energy, Mines and Resources and Forestry to create the Department of Natural Resources.

⁵ Census year.
