Introduction

This document presents historical tables displaying Federal Government expenditures and personnel applied to activities in science and technology (S&T). S&T can be divided into research and development (R&D) and related scientific activities (RSA) expenditures. Expenditures and personnel for each fiscal year to 2002-03 are actual while the data for 2003-04 and 2004-05 are forecasts and estimates respectively.

As the data are designed primarily for use by those with some knowledge of the government's scientific activities, a minimum of explanatory material accompanies the statistics.

This report is organized into four main sections of statistical data. The first section presents combined data on the natural and social sciences, the second, data on the natural sciences alone, the third, data on the social sciences alone and the fourth, data on personnel. The note to readers contains definitions of the terms used to categorize science expenditures as well as some notes on the limitations of the data. **Readers are urged to read this latter section before drawing their own conclusions from the data.**

This working paper is a supplement to the service bulletin "Science Statistics", Vol. 28 No. 11, Catalogue 88-001-XIE and the annual publication "Federal Scientific Activities 2003-04", Catalogue No. 88-204-XIE.

Highlights

- The Federal Government planned to spend \$9.2 billion on scientific and technological activities for the estimate year 2004-05, an increase of 2.2% over forecasted expenditures on S&T for 2003-04.
- The central activity of S&T is scientific research and experimental development. In 2004-05, the Federal Government is expected to spend \$5.8 billion on R&D. This includes both intramural performance and extramural funding of R&D.
- Activities in the natural sciences and engineering (NSE) will receive the bulk of Federal Government funding (76% in 2004-05), most of which (74%) is for research and development.
- Most of the monies (70%) for the social sciences and humanities (SSH) will be spent on related scientific activities such as data collection, information services and special services and studies. Statistics Canada alone accounted for 38% of these expenditures.
- In 2004-05, 34,960 person-years were involved in federal S&T activities, a 1.3% increase from 2003-04. Fifty-nine percent, or 20,664 person-years, were engaged in RSA activities.

This report was prepared by **Yvonne Tremblay** under the direction of **Lloyd Lizotte**, Science, Innovation and Electronic Information Division.

Notes to readers

Scope and limitations of the data

The expenditure data for scientific activities controlled by federal departments and agencies provided in this document correspond to the budgetary expenditures by program presented in Main Estimates for the approval of Parliament.

Definitions

Federal departments and agencies in receipt of budgetary appropriations are requested to identify those resources reported in Main Estimates which are to be used in scientific and technological (S&T) activities in both natural and social sciences.

The definitions used in collecting the data for this report are essentially the same as those used by the OECD in its "Frascati Manual" and by UNESCO in its "Manual for Statistics on Scientific and Technological Activities".

Natural and social sciences

The term, natural sciences, embraces those disciplines of study concerned with understanding, exploring, developing or utilizing the natural world. It covers the physical sciences, the life sciences, including the medical and agricultural sciences and engineering.

The term, social sciences, is to be regarded as synonymous with social sciences and humanities. Thus it embraces all disciplines involved in the study of human actions and conditions and the social, economic and institutional mechanisms affecting humans. Included are such disciplines as anthropology, demography, economics, geography, history, languages, literature and linguistics, law, library science, philosophy, political science, psychology, religious studies, social work, sociology, and urban and regional studies.

In some situations it may be difficult to decide whether an activity falls in the domain of the natural or social sciences. Nevertheless, an assignment must be made, and respondents are asked to consider the dominant orientation of the work and the nature of the expertise of the work and of the personnel involved.

Scientific and technological activities

There are two main categories of scientific and technological activities;

- Scientific research and experimental development (R&D) is defined as creative work undertaken on a systematic basis in order to increase the stock of knowledge, including the knowledge of humans, their culture and society, and the use of this stock of knowledge to devise new applications.
- Related scientific activities (RSA) are defined as those activities which complement and extend R&D by contributing to the generation, dissemination and application of scientific and technological knowledge. Enumerated below are the sub-groupings of related scientific activities divided by field of science.

Natural sciences

Scientific data collection
Information services
Special services and studies
Education support

Social sciences

General purpose data collection
Information services
Special services and studies
Education support

Intramural and extramural performance

Intramural S&T is defined as those activities carried out primarily by the federal government. Considered to be intramural are those activities or services provided by outside agencies but directly controlled and managed by in-house personnel. Examples include computer services, provision of ship and plane services, construction of laboratory, test or prototype equipment. Intramural also includes those activities performed by one federal government department or agency on behalf of another on a cost recovery basis.

An activity is considered to be extramurally performed if the management as well as the performance is entrusted to a non-federal organization. The six extramural performing sectors are: Canadian business enterprises, Higher education, Canadian non-profit institutions, Canadian provincial and municipal governments, Foreign performers, and Other performers.

Intramural performance includes:

- scientific activities carried out by personnel of units assigned to the program;
- the acquisition of land, buildings, machinery and equipment for scientific activities;
- the administration of scientific activities by program employees;
- the purchase of support services such as EDP and travel.

The intramural expenditures reported for scientific activities are those direct costs associated with scientific programs. These costs include that portion of a program's contribution to employee benefit plans (e.g., superannuation) which is applicable to the scientific manpower within the program. Non-program ("indirect") costs, such as the value of services provided by other departments without charge and accommodation provided by the reporting program are included.

Extramural performers include:

Canadian business enterprises - business and government enterprises including public utilities and government-owned firms. Incorporated consultants who provide scientific and engineering services are also included. Industrial research institutes located at Canadian universities are considered to be in the university sector.

Higher education - including affiliated institutes owned, administered or staffed by universities.

Canadian non-profit institutions - charitable foundations, voluntary health organizations, scientific and professional societies, and other organizations not established to earn profits. Non-profit institutions primarily serving or controlled by another sector are included in that sector (e.g. The Pulp and Paper Research Institute is considered to be part of the Canadian Business Enterprises sector).

Canadian provincial and municipal governments - departments and agencies of provincial and municipal governments. However, provincial utilities are included in the Canadian Business Enterprises sector.

Foreign performers - all foreign governments, foreign companies (including foreign subsidiaries of Canadian firms), international organizations, non-resident foreign nationals and Canadians studying or teaching abroad.

Other performers - individuals or organizations not belonging to any of the above sectors. This includes provincial research councils and organizations.

Contracts, grants and contributions

The federal government uses three methods of funding extramurally-performed S&T activities:

A contract is a legal agreement between two or more parties which will usually specify the nature and general objective of the S&T activity to be performed and the provision of the service according to an agreed schedule and cost.

A grant is an unconditional payment for which service is not necessarily expected (information, goods, etc.). It is to be noted, however, that prospective recipients may have to satisfy certain eligibility requirements.

A contribution is an agreement between the recipient which specifies the terms and conditions under which funds will be paid. The payments are conditional upon performance or achievement and the recipients use of the funds is subject to audit.

In this report the term "grants" encompasses both grants and contributions. Data subdivided by type of funding are collected only for R&D activities.

Personnel

Federal employees: "permanent", temporary and casual staff of all departments and agencies of the Federal Government, as well as the Canadian Nuclear Safety Commission, Atomic Energy of Canada Limited, Canada Mortgage and Housing Corporation, Canadian Broadcasting Corporation, the Canadian Human Rights Commission, the Canadian International Development Agency, the Commissioner of Official Languages, the International Development Research Centre, the International Joint Commission, the Law Reform Commission of Canada, the Canadian Institutes of Health Research, the National Capital Commission, the National Energy Board, the National Film Board, the National Library of Canada, the National Museums of Canada, the National Research Council Canada, the Natural Sciences and Engineering Research Council of Canada, the Privy Council Office, the National Archives of Canada, the Public Service Commission of Canada, the Royal Canadian Mounted Police, and the Social Sciences and Humanities Research Council of Canada.

Person-years: a measure of the time actually devoted to the conduct of scientific activities. An employee who is engaged in scientific activities for about four months (e.g. a summer term employee), or one who works about a third of the time on scientific activities, would have a person-year equivalence of 0.3.

Scientific and professional: groups engaged in the application of a comprehensive body of knowledge acquired through university graduation or groups in which membership in Canada is generally controlled by legal licensing bodies.

Administrative and foreign service: groups engaged in the planning, execution, conduct and control of programs serving the public interest, relations between Canada and other countries and the requirements of internal management in the Public Service of Canada.

Technical: groups engaged in the conduct of analytical, experimental and investigative duties in all the sciences and the performance of similar technical duties in which the requisite knowledge and skills are normally acquired through completion of secondary school education and specialized training.

Administrative support: groups such as clerical and regulatory; communications; data processing; office equipment operation; secretarial, stenographic, typing, and telephone operation.

Operational: groups engaged in the performance of a craft or of unskilled work. It refers to groups such as correctional, general services, postal operations, and printing operations.

From 1996-97 data on personnel resources have been compressed from seven to three principal categories. Scientific and Professional includes Executive; Technical; and Administrative Support includes Administrative and Foreign Service, Operational and Military.

Footnotes:

1. Environment Canada resources include large one-time grants and contributions to initiatives outside of the department which did not result in increases in departmental expenditures (\$60M for Climate and Atmospheric Sciences in 1999/2000, \$50M for the Sustainable Development Technology Fund in 2001/02, \$50M for the Canadian Foundation for Climate and Atmospheric Sciences and \$125M for the Sustainable Development Technology Fund in 2003/04 and \$100M forecasted for the Sustainable Development Technology Fund in 2004/05).
2. New program structures combined with stricter interpretation of the definitions of R&D and RSA, have led to a significant change in NRCan's reporting of resources as compared to previous years (effective as of 2001-2002).
3. Census year.

Footnotes:

1. Environment Canada resources include large one-time grants and contributions to initiatives outside of the department which did not result in increases in departmental expenditures (\$60M for Climate and Atmospheric Sciences in 1999/2000, \$50M for the Sustainable Development Technology Fund in 2001/02, \$50M for the Canadian Foundation for Climate and Atmospheric Sciences and \$125M for the Sustainable Development Technology Fund in 2003/04 and \$100M forecasted for the Sustainable Development Technology Fund in 2004/05).
2. New program structures combined with stricter interpretation of the definitions of R&D and RSA, have led to a significant change in NRCan's reporting of resources as compared to previous years (effective as of 2001-2002).

Catalogued publications

Statistical Publications

- 88-202-XIE** Industrial Research and Development, 2004 Intentions (with 2003 preliminary estimates and 2002 actual expenditures)
(annual)
- 88-204-XIE** Federal Scientific Activities, 2003-2004 (annual)
- 88-001-XIE** Science Statistics (monthly)

Volume 28

- No. 1 Estimation of research and development expenditures in the higher education sector, 2001-2002 HERD (January 2004)
- No. 2 Total spending on research and development in Canada, 1990 to 2003 and provinces, 1990 to 2001 GERD (January 2004)
- No. 3 Distribution of federal expenditures on science and technology, by province and Territories, 2001-2002 (February 2004)
- No. 4 Research and Development (R&D) expenditures of Private non-profit (PNP) organizations, 2002 (April 2004)
- No. 5 The provincial research organizations, 2001 (May 2004)
- No. 6 Scientific and technological (S&T) activities of provincial governments, 1994-95 to 2002-03 (June 2004)
- No. 7 Biotechnology scientific activities in selected federal government departments and agencies, 2002-2003 (July 2004)
- No. 8 Estimates of total spending on research and development in the health field in Canada, 1988 to 2003. (July 2004)
- No. 9 Industrial Research and Development, 2000 to 2004. (August 2004)
- No. 10 Estimation of research and development expenditures in the higher education sector, 2002-2003. (November 2004)
- No. 11 Federal government expenditures on scientific activities, 2004-2005^P, (November 2004)
- No. 12 Total spending on research and development in Canada, 1990 to 2004^P, and provinces, 1990 to 2002 (December 2004)

Working papers – 2004

- ST-04-01E Starting the new century: technological change in the Canadian private sector, 2000-2002, (January 2004)
- ST-04-02E Estimation of research and development expenditures in the higher education sector, 2001-2002 (January 2004)
- ST-04-03E Estimates of Canadian research and development expenditures (GERD), Canada, 1992 to 2003^P, and by province, 1992 to 2001 (January 2004)
- ST-04-04E The Many Guises of Innovation: What we have learnt and where we are heading (January 2004)
- ST-04-05E Provincial distribution of federal expenditures and personnel on science and technology, 1995-1996 to 2001-2002 (February 2004)
- ST-04-06E Biotechnology Use and development Survey: methodology, issues and responses (February 2004)
- ST-04-07E An historical comparison of technological change, 1998-2000 and 2000-2002, in the private and public sectors (March 2004)
- ST-04-08E Technological change in the public sector, 2000-2002 (March 2004)
- ST-04-09E Regional disparities of research and development in the business services sector (April 2004)
- ST-04-10-E Innovative firms: A look at small firms (May 2004)
- ST-04-11-E Scientific and technological activities of provincial governments, 1994/95 to 2002/03 (June 2004)
- ST-04-12-E Federal government payments to industry, 1997-1998 to 2001-2002 (July 2004)
- ST-04-13-E Community innovation: Industrial specialization in Canadian cities, (July 2004)
- ST-04-14-E Estimates of total expenditures on research and development in the health field in Canada, 1988 to 2003, (July 2004)
- ST-04-15-E Community innovation: innovation performance of manufacturing firms in Canadian communities, (September 2004)
- ST-04-16-E List of papers published by Kluwer Academic Publishers, in the Economics of Science, Technology and Innovation Series, (October 2004)
- ST-04-17-E Trends in Canadian biotechnology activity: 1997 to 2001, (October 2004)
- ST-04-18-E Public sector technology transfer in Canada, 2003, (November 2004)
- ST-04-19-E Estimation of research and development expenditures in the higher education sector, 2002-2003, (November 2004)
- ST-04-20-E Estimates of Canadian research and development expenditures (GERD), Canada, 1993 to 2004^P, and by province 1993 to 2002 (December 2004)
- ST-04-21-E Characteristics of firms that grow from small to medium size: growth factors--interviews and measurability, 1999 (December 2004)
- ST-04-22-E Characteristics of firms that grow from small to medium size: innovation and growth in small manufacturing firms, 1997 to 1999 (December 2004)

Research papers

- No. 1 The state of science and technology indicators in the OECD countries, by Benoit Godin, (August 1996)
- No. 2 Knowledge as a capacity for action, by Nico Stehr, (June 1996)

- No. 3 Linking outcomes for workers to changes in workplace practices: an experimental Canadian workplace and employee survey, by Garnett Picot and Ted Wannell, (June 1996)
- No. 4 Are the costs and benefits of health research measurable? by M.B. Wilk, (February 1997)
- No. 5 Technology and economic growth: a survey, by Peter Hanel and Jorge Niosi, (April 1998)
- No. 6 Diffusion of biotechnologies in Canada, by Anthony Arundel, (February 1999)
- No. 7 Barriers to innovation in services industries in Canada, by Pierre Mohnen and Julio Rosa, (November 1999)
- No. 8 Explaining rapid growth in Canadian biotechnology firms, by Jorge Niosi, (August 2000)
- No. 9 Internationally comparable indicators on biotechnology: a stocktaking, a proposal for work and supporting material, by W. Pattinson, B. Van Beuzekom and A. Wyckoff, (January 2001)
- No. 10 Analysis of the survey on innovation, advanced technologies and practices in the construction and related industries, 1999, by George Seaden, Michael Guolla, Jérôme Doutriaux and John Nash, (January 2001)
- No. 11 Capacity to innovate, innovation and impact: the Canadian engineering services industry, by Daood Hamdani, (March 2001)
- No. 12 Patterns of advanced manufacturing technology (AMT) use in Canadian manufacturing: 1998 AMT survey results, by Anthony Arundel and Viki Sonntag, (November 2001)
