Aircraft Movement Statistics December 2003 (Preliminary)

Airports with NAV CANADA Air Traffic Control Towers

The data in this bulletin represent preliminary monthly statistics for airports with NAV CANADA air traffic control towers.

In December, the 42 Canadian airports with NAV CANADA air traffic control towers reported 297,297 take-offs and landings, a decrease of 1.3% compared to December 2002 (301,364). This marks the ninth consecutive decline in year-over-year comparisons of monthly movements. Twenty-one airports showed year-over-year decreases in aircraft movements for December compared to 26 airports in November 2003. Six airports showed decreases greater than 20% this month, the same number of airports as recorded in November.

Itinerant movements (flights from one airport to another) rose by 1.2% (up 2,646 movements) in December 2003 compared to December 2002. This represents the first increase since March 2003. Local movements (flights that remain in the vicinity of the airport) dropped by 7.7% (down 6,713 movements) in December 2003 marking the ninth consecutive month.

The top ten airports in terms of volumes of itinerant movements in December showed year-over-year variations ranging from 18.0% (982 movements) at Victoria Intl to -13.3% (-828 movements) at Edmonton City Centre. Five of the top ten airports recorded decreases in itinerant movements compared to December 2002, compared to six airports in November 2003.

The top ten airports in terms of local movements showed year-over-year variations ranging from 79.8% (2,188 movements) at Toronto/Buttonville Municipal to -25.3% (-1,154 movements) at Langley. Five of the top ten airports recorded decreases in local movements compared to December 2002.

More detailed statistics for airports with NAV CANADA air traffic control towers and flight service stations will be released in the Aircraft Movement Statistics monthly report (TP141 - Volume 1). Statistics for airports without air traffic control towers will appear in TP 141 - Volume 2. Upon release, the TP141 reports are available (free) on-line at <http://www.tc.gc.ca/pol/en/Report/tp141e/tp141.htm>

For further information concerning this bulletin, please contact Aviation Statistics Centre, Statistics Canada (1-866-500-8400).

Note of Appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses and governments. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Data Source and Methodology

Aircraft Movement Statistics are accumulated from data originating with air traffic control tower units. Because staff in these units are highly trained in factual observation and actual reporting, the entries into the data base are of a very high quality. To maintain uniformity in the reporting of source data, the Aviation Statistics Centre (ASC) issues air traffic control units with an "Air Traffic Designators" handbook (TP-143) showing the official Transport Canada aircraft type designators and the designators of various domestic and international air carriers. Data errors caused during transcription and transmission on the NAV CANADA Aircraft Movement Statistics (NCAMS) network are identified as part of the built-in editing procedures. Furthermore, extensive editing cycles are part of the computer processing programs. All identified errors are manually corrected by ASC editing staff.

Collection

The records are completed daily, based on a twenty-four hour clock running from zero hour to 23:59. The times recorded are Greenwich Mean Time (GMT); however, published statistics are shown in local times. The records are transmitted electronically to the Aviation Statistics Centre (ASC). The Aviation Statistics Centre maintains a data bank of current information on all registered aircraft. The storage of this information allows for a reduction in the reporting burden of the survey respondents and limits the element of human error associated with the preparation of source documents. The data in the bank include registered aircraft identifications and their corresponding aircraft types, gross take-off weights, types of power plant (piston, jet or turboprop); whether the aircraft are fixed wing, helicopters or gliders. The data also provide a basis for identifying type of flights (commercial, private and government) and the geographical area in which the flights take place. The data bank also includes an Airport Environmental file against which the airport category is checked; the reported runway is validated and the time difference between GMT and local is allocated.
