Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in this Statistics Canada publication:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- ^p preliminary
- ^r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution (The coefficient of variation of the estimate is between 16.6% and 33.3%.)
- F use with great caution (The coefficient of variation of the estimate is 33.4% or over.)

Introduction

This report presents an overview of the first release from the 2001 Participation and Activity Limitation Survey (PALS). For a detailed analysis, please see A Profile of Disability in Canada (Catalogue no. 89-577-XIE).

The 2001 PALS was a national survey about persons with disabilities whose everyday activities are limited because of a physical or mental condition or health problem. It also collected data on the type and severity of activity limitations, need for specialized equipment or aids, and barriers to employment, education, accommodation, transportation and leisure.

The population covered by the survey was persons residing in private and some collective households in the ten provinces. Persons living in the Yukon, Northwest Territories and Nunavut, as well as persons living in institutions and on First Nations reserves were excluded. Data was collected from September 2001 to January, 2002. For more information on methods and data quality, please refer to the section at the end of this report.

Questions or comments pertaining to this report should be addressed to:

Methods

The 2001 Participation and Activity Limitation Survey (PALS) was a post-censal survey which collected information about persons with disabilities whose everyday activities are limited because of a health-related condition or problem. The survey took place between September 2001 and January 2002. PALS was funded by Human Resources Development Canada (HRDC).

PALS is a post-censal survey because it used the 2001 Census as a sampling frame to identify its population. The 2001 Census questionnaire included two general questions on activity limitations. The PALS respondents were selected through the use of the census information on age, geography and the responses to these two general questions.

After the 2001 Census, a sample of individuals who answered YES to the activity limitation questions on the census form was selected. The PALS sample was 43,000, consisting of approximately 35,000 adults and 8,000 children. The interviews were conducted by telephone with the interviewers completing a paper and pencil questionnaire. Two questionnaires were used, one for adults aged 15 and over and one for children under 15. The interviews for the children's questionnaire were conducted with the parent or guardian of the child. The overall response rate was 82.5%.

The population covered by the survey was persons residing in private and some collective households in the ten provinces. Persons living in the Yukon, Northwest Territories and Nunavut, as well as persons living in institutions and on First Nations reserves were excluded from the survey.

PALS followed the groundwork laid by the Health and Activity Limitation Survey (HALS), which was conducted by Statistics Canada about persons with disabilities in 1986 and 1991. However, the data from the HALS and PALS cannot be compared because of significant differences in the census questions on activity limitations used in 1991 and 2001, their sampling plans, the operational definition of their target population and the content of their questionnaires. For more information about the differences between HALS and PALS, please see the report, "*A New Approach to Disability Data: Changes between the 1991 Health and Activity Limitation Survey (HALS) and the 2001 Participation and Activity Limitation Survey (PALS)*", published in December 2002 (Catalogue no. 89-578-XIE).

Data Limitations

Since the estimates were obtained from a sample as opposed to a census, the estimates will vary from one sample to another (sampling error). In order to provide estimates of sampling error for the statistics, the bootstrap method was used.

All other types of errors, such as coverage, response, processing and non-response, are non-sampling errors. Measures were taken to minimize such errors. These actions included a pilot test of all of the survey process, from the questionnaire to data processing, follow-up of refusals and the application of a detailed set of edit rules to identify and correct any inconsistent responses.

Definitions

Disability:

The Participation and Activity Limitation Survey uses the World Health Organization's (WHO) framework of disability provided by the International Classification of Functioning (ICF). This framework defines disability as the relationship between body structures and functions, daily activities and social participation, while recognizing the role of environmental factors.

For the purpose of PALS, persons with disabilities are those who reported difficulties with daily living activities, or who indicated that a physical, mental condition or health problem reduced the kind or amount of activities they could do.

The respondents' answers to the disability questions represent their perception of the situation and are therefore subjective.

Disability rate:

Refers to the total number of persons who reported activity limitations expressed as a percentage of the population. For example, the calculation of the disability rate for the population aged 15 to 64 in Ontario is as follows: (Number of persons with disabilities aged 15-64 in Ontario/Total population aged 15-64 in Ontario)*100

Severity of disability:

An index measuring the severity of the disability was constructed based on the answers to the survey questions. Points were given according to the intensity and the frequency of the activity limitations reported by the respondent. A single score was computed for each type of disability. Each score was then standardized in order to have a value between 0 and 1. The final score is the average of the scores for each type of disability.

Since the survey questions differ depending on the age of the respondent, a different scale was constructed for adults (15 years and over), for children under 5 and for children aged 5 to 14. Each scale was then divided into different severity levels. The scale for adults and for children aged 5 to 14 was divided into four groups (*that is, mild, moderate, severe and very severe*), while the scale for children under 5 was divided into two groups (*that is, mild to moderate and severe to very severe*).

Type of disability among adults:

The PALS survey questions allow the identification of the following types of disabilities among adults aged 15 and over:

Hearing: Difficulty hearing what is being said in a conversation with one other person, in a conversation with three or more persons or in a telephone conversation.

Seeing: Difficulty seeing ordinary newsprint or clearly seeing the face of someone from 4 metres (12 feet).

Speech: Difficulty speaking and/or being understood.

Mobility: Difficulty walking half a kilometre or up and down a flight of stairs, about 12 steps without resting, moving from one room to another, carrying an object of 5 kg (10 pounds) for 10 metres (30 feet) or standing for long periods.

Agility: Difficulty bending, dressing or undressing oneself, getting into and out of bed, cutting own toenails, using fingers to grasp or handling objects, reaching in any direction (for example, above one's head) or cutting own food.

Pain: Limited in the amount or kind of activities that one can do because of a long-term pain that is constant or reoccurs from time to time, for example, recurrent back pain.

Learning: Difficulty learning because of a condition, such as attention problems, hyperactivity or dyslexia, whether or not the condition was diagnosed by a teacher, doctor or other health professional.

Memory: Limited in the amount or kind of activities that one can do due to frequent periods of confusion or difficulty remembering things. These difficulties may be associated with Alzheimer's disease, brain injuries or other similar conditions.

Developmental: Cognitive limitations due to the presence of a developmental disability or disorder, such as Down syndrome, autism or mental impairment caused by a lack of oxygen at birth.

Psychological: Limited in the amount or kind of activities that one can do due to the presence of an emotional, psychological or psychiatric condition, such as phobias, depression, schizophrenia, drinking or drug problems.

Unknown: The type of disability is unknown if the respondent answered YES to the general questions on activity limitations, but did not provide any YES to the questions about type of disability that followed.

Type of disability among children:

The PALS survey questions allow the identification of the following types of disabilities among children under 15:

Hearing*: Difficulty hearing.

Seeing*: Difficulty seeing.

Speech:** Difficulty speaking and/or being understood.

Mobility:** Difficulty walking. This means walking on a flat firm surface, such as a sidewalk or floor.

Dexterity:** Difficulty using hands or fingers to grasp or hold small objects, such as a pencil or scissors.

Learning:** Difficulty learning due to the presence of a condition, such as attention problems, hyperactivity or dyslexia, whether or not the condition was diagnosed by a teacher, doctor or other health professional.

Developmental delay*:** Child has a delay in his/her development, either a physical, intellectual or another type of delay.

Developmental disability or disorder:** Cognitive limitations due to the presence of a developmental disability or disorder, such as Down syndrome, autism or mental impairment caused by a lack of oxygen at birth.

Psychological:** Limited in the amount or kind of activities that one can do due to the presence of an emotional, psychological or behavioural condition.

Chronic condition*: Limited in the amount or kind of activities that one can do due to the presence of one or more chronic health conditions that have lasted or are expected to last six months or more and that have been diagnosed by a health professional. Examples of chronic conditions are asthma or severe allergies, heart condition or disease, kidney condition or disease, cancer, epilepsy, cerebral palsy, Spina Bifida, Cystic Fibrosis, Muscular Dystrophy, Fetal Alcohol Syndrome, etc.

Unknown*: The type of disability is unknown if the respondent answered YES to the general questions on activity limitations, but did not provide any YES to the questions about type of disability that followed.

* Applicable to all children under 15.

** Applicable to children aged 5 to 14.

*** Applicable to children under 5.
