Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- ^p preliminary

Note to readers

During the 1980s and 1990s, maintenance enforcement programs (MEPs) were created in each province and territory to assist recipients in the collection and enforcement of child and spousal support payments. This is the fourth release of information from the Maintenance Enforcement Survey (MES), which collects data on child and spousal support from the maintenance enforcement programs. Prince Edward Island, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta and British Columbia participate in the survey. These seven participating provinces represent about 90% of Canada's population.¹

Estimates indicate that less than one-half of all support cases are registered with a maintenance enforcement program (MEP).² Consequently, survey data are not representative of all support orders in Canada. In some provinces, including four that provide data to the MES, registration is voluntary.³

For this reason, MEPs in these provinces tend to handle the more difficult cases – ones coming into the program with arrears already in existence, or where there has been some difficulty in securing payments. Readers are therefore cautioned against using the survey data to evaluate specific enforcement programs or generalize the results to all support orders in Canada.

1. *This report presents fiscal year 1999/2000 through 2003/2004 child and spousal support data for Prince Edward Island, Saskatchewan and British Columbia. Some annual data for Quebec and Alberta are available as well. Monthly snapshot data for these same provinces plus New Brunswick and Ontario are also presented. Please consult Appendix A for a glossary of terms used throughout this report.*
2. *See "Canadian Facts", Survey of Parents' Views of the Federal Child Support Guidelines, 2000.*
3. *Registration is voluntary or "opt-in" in Prince Edward Island, Saskatchewan, Alberta and British Columbia. In New Brunswick, Quebec and Ontario, registration in a MEP is "opt-out" or mandatory.*

Highlights

- Survey data indicate that maintenance enforcement programs are operating primarily for the benefit of children. Of the cases registered with the programs in March 2004, the large majority included a support amount for children. This included 97% of the caseload in British Columbia, 96% in New Brunswick, 91% in Prince Edward Island, 90% in Saskatchewan, 79% in Alberta and 73% in Ontario.
- Maintenance enforcement program caseloads have been increasing in several jurisdictions. Compared with March 2003, the caseload in March 2004 was up 7% in Prince Edward Island, 4% in Quebec, and 2% in Ontario and Saskatchewan. In New Brunswick, there was a 3% increase in the number of cases enrolled from April 2003. In British Columbia, the caseload remained fairly stable, while in Alberta, enrolment declined by 3%.
- Among cases that have a regular monthly payment in each of the seven reporting provinces, a large proportion (46% to 68%) involve a payment of \$400 or less. Few cases (1% to 5%) require a monthly payment greater than \$1,000.
- For the month of March 2004, the most recent month of data available, the majority of cases were in compliance with their regular monthly payment due, ranging from 55% of cases in Prince Edward Island to 79% of cases in Quebec.⁴
- During 2003/2004, reporting provinces collected the majority of the money that was due in the form of regular monthly payments. Of the four provinces that provide these annual data, Prince Edward Island collected 66% of the approximately \$8 million due for that year, British Columbia collected 71% of the \$152 million due,⁵ Saskatchewan collected 78% of the \$30 million due and Quebec collected 92% of the \$432 million due.
- In March 2004, of those cases enrolled in the MEPs in Prince Edward Island, Quebec, Saskatchewan and British Columbia, about two-thirds of payors had first entered the program with arrears⁶. Of these, 41% had paid off their arrears and another 25% saw their arrears decrease. One-third (33%) saw their arrears increase. In about 1% of cases, arrears remained constant.
- During 2003/2004, MEPs utilized mainly administrative enforcement actions, as opposed to court actions, to secure payments. In British Columbia, trying to find the payor (“tracing”) was the most often performed administrative enforcement activity (35% of all administrative enforcement activities) whereas in Saskatchewan, this action ranked third (18%), after demand for information (35%) and jurisdictional garnishment and attachment (21%).

4. In certain cases, if the program is certain to recover the sum from the payor, Quebec legislation allows for the MEP to provide an advance to the recipient to help ensure regularity of payments. Advances are considered to be support payments and must be repaid by the payor.

5. British Columbia maintains a policy of allowing direct payments to be made and received by its clientele throughout the case duration, and since most of these direct payments are not reported until after the survey data are collected, a substantial number of payors are reported as not having paid, even though they actually have.

6. It should be noted that upon registration, some recipients are unable to reconstruct their payment history and so are unable to produce an affidavit establishing arrears. Other recipients may decide not to pursue past arrears. These cases have to be registered as not having any arrears, even though they are, in fact, non-compliant cases right from the start.

1.0 Introduction

1.1 Background

During the 1980s and 1990s, maintenance enforcement programs (MEPs) were created in each province and territory in Canada. At the recommendation of the federal-provincial-territorial Family Law Committee (FLC), these programs were implemented to assist recipients in the collection and enforcement of child and spousal support payments. Their role is to provide the necessary administrative support to payors and recipients and to improve compliance with support obligations.

The programs were given a number of administrative enforcement powers to secure payments before resorting to the courts for the more difficult cases. For example, the federal government set up the Family Law Assistance Services Section in the Department of Justice Canada to assist these programs by providing trace and locate information using federal databases.⁷ The interception or garnishment of federal funds (e.g. income tax refunds) and federal employee's salaries or pensions is also provided for through two federal statutes, the *Family Orders and Agreements Enforcement Assistance Act (1987)*, and the *Garnishment, Attachment and Pension Diversion Act (1983)*.

The 1990s saw considerable growth in the sophistication of MEP automated information systems and this greatly expanded their capabilities to process and report information, and to communicate with each other and with federal enforcement services.

At the same time, organized and standardized case information on separating or divorcing parents was seriously lacking even as family law policies and issues came to the forefront. Issues of concern for policy-makers included the changes in the value of court-ordered support amounts, consistency of methods used for determining award amounts, and the taxation of support.

In 1995, to address these issues, the Family Law Committee recommended the implementation of child support guidelines and changes to the tax treatment of child support. The federal government responded by enacting the Federal Child Support Guidelines for divorce cases and legislating

additional enforcement measures to assist the MEPs. Federal funding was also provided to implement child support guidelines in provincial/territorial legislation and to assist them with the workload that might be created in family courts as a result of these changes.

To address the information gap in family law, the Canadian Centre for Justice Statistics (CCJS) and various MEP representatives established national data requirements and a collection strategy. In 1995, a set of survey specifications for the Maintenance Enforcement Survey (MES) was approved and this became the blueprint for current data collection.

Results from the Maintenance Enforcement Survey show that MEPs generally continue to experience increases in their caseloads (see Section 4.1). However, a survey of separated and divorced parents confirms that not all support orders or written agreements in Canada are registered with a MEP. The survey estimated that MEPs handle 40-50% of all support orders and agreements in Canada, a proportion that varies greatly across provinces.⁸ Given that the primary purpose of the MEPs is to assist recipients in collecting their payments, it is expected that their cases often have issues related to securing payment or regularity of payment.

The MEPs across Canada differ in a number of important aspects because of different local needs and policies, and these have important implications for understanding the data collected by the Maintenance Enforcement Survey.⁹ These differences include client profile, enforcement powers in legislation, enforcement practices, the enrolment process, how payments are handled and registered, the responsibilities of clients, and how cases are closed (see Section 2 for more information on jurisdictional differences).

7. *Databases at the Canada Revenue Agency and Human Resources and Skills Development Canada (HRSDC) can be searched for a payor's address. HRSDC databases can also be searched for a payor's employer.*

9. *See Statistics Canada, Maintenance Enforcement Programs in Canada: Description of Operations 1999/2000 for more information on the operation of MEPs across Canada.*

1.2 Report overview

This report presents annual child and spousal support data for Prince Edward Island, Quebec, Saskatchewan, Alberta and British Columbia for 1999/2000 through 2003/2004. Monthly snapshot data for these same provinces plus New Brunswick and Ontario are also presented.

The report provides an analysis of the characteristics of cases that are registered with the maintenance enforcement programs in these seven provinces and highlights changes that have occurred over the five years that data are available.

Apart from this introduction, the report is organized into three additional sections:

Section 2 provides a brief description of terminology used by the MEPs, and main functions and processes, especially those that have a bearing on the interpretation of the data.

Section 3 presents an overview of the survey. It describes the survey methodology, coverage and limitations, as well as provisions surrounding confidentiality of the data.

Section 4 displays a range of key data tables collected by the survey. It includes an analysis of the data available from the seven participating provinces on caseload, case characteristics, financial flows and payment patterns, arrears, and finally, number and type of enforcement actions and case closures.

A glossary of standard definitions is provided in Appendix A.

2.0 A description of maintenance enforcement services

The task of processing and ensuring that child and spousal support is paid is essentially the same for all maintenance enforcement programs (MEPs) across Canada. Maintenance enforcement programs register cases, process payments, and monitor and enforce cases. Eventually, a case no longer needs to be in a program and is closed. Each jurisdiction has developed its own maintenance enforcement policies and procedures to address local needs. The following provides an overview of the jurisdictional differences that have an impact on data collection and interpretation.

2.1 Registration

All potential support recipients with an enforceable court order or agreement¹⁰ can avail themselves of the services of a maintenance enforcement program. However, not all cases of child and spousal support that exist in a province or territory are administered by maintenance enforcement programs. Recipients and payors may amicably deal with support payments and never use the services of a MEP.

About half of the jurisdictions have adopted an automatic or “opt-out” registration system. This includes Newfoundland and Labrador, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and the Northwest Territories. In these seven jurisdictions, maintenance orders are automatically filed with a maintenance enforcement program at the time of the order. To be removed from the caseload of a MEP, a recipient must ask to be withdrawn from the program.¹¹ In many jurisdictions, the payor has to agree to the withdrawal. This request can be denied if the recipient is collecting social assistance.¹²

Six jurisdictions have a voluntary “opt-in” program. This includes Prince Edward Island, Saskatchewan, Alberta, British Columbia, Yukon and Nunavut. Either or both the recipient and the payor can register with the MEP. The only exceptions are cases where the recipient is entitled to social assistance, in which case enrolment is mandatory.

MEPs in provinces or territories in which cases are automatically enrolled from court are more likely to include a higher proportion of “compliant” and “paid up” case accounts. This will have an impact on the proportion of MEP cases that are in compliance and the proportion that have arrears.

There are administrative requirements to be met in order for a case to be registered; personal information on both parties, employment, legal and financial information are required to set up the case and payment information. Letters are generated notifying clients of their responsibilities, and/or identifying that enforcement action may follow. Review of cases and the determination of appropriate enforcement measures are in addition to these activities, and may differ widely for each case. Tracing may be initiated if information as to the location of either the payor or recipient is missing, and to determine if the case must be sent elsewhere under interjurisdictional support orders legislation.

2.2 Payment processing

The payment of support is processed and handled by a variety of methods. MEPs may receive payments for cases from a number of sources, which may or may not be a result of enforcement actions on their part. Most MEPs offer a number of different methods of paying a support obligation: by cheque, post-dated or otherwise, money order, credit card, telephone or Internet banking, and most recently, by pre-authorized payment plans from bank accounts. Payments may also come directly from an attachment of wages, a garnishment and attachment of assets (e.g. bank account), or a federal interception of federal monies owed to the payor, such as an income tax refund.

Much of the visible activity of MEPs involves the processing of payments and disbursement of payments to recipients. There are two models in use in Canada. There is a “pay-to” system, where the payor makes his/her payment payable to the MEP, which functions as a clearinghouse for the payment before disbursing it to the recipient. Newfoundland and Labrador, Prince Edward Island, New Brunswick, Quebec, Ontario, Alberta, the Northwest Territories and Nunavut use this approach. Payments may be made by way of certified cheque, money order, cash, debit card, credit card and company cheques¹³. All monies received

10. Domestic contracts that meet jurisdictional requirements for enforcement include paternity agreements and separation agreements filed in court.

11. Data on the number of individuals who opt out of programs is not available.

12. Provinces and territories treat child support as income and deduct it in whole or in part from social assistance benefits received by recipients.

13. Payment options vary from one jurisdiction to another.

by the program are deposited into a trust account and the government sends the money to the recipient, usually through direct deposit or by cheque.

The second model is a combination of “pay-to” and “pay-through”. The “pay-through” approach refers to a system where payors make their payments via the MEP, which acts simply as the go-between for the parties involved. Once the payment is entered into the system by the MEP, the payment is forwarded to the recipient. Nova Scotia, Manitoba, Saskatchewan, British Columbia and Yukon use this combination model. This means that payments may be made payable to either the recipient or to the MEP.

2.3 Enforcement

The MEPs are required by their legislation to monitor and enforce cases registered with them. They must enforce the terms and amount of the order or agreement, and have no discretion to change the terms in any way. Should circumstances change, the parties are encouraged to pursue a variation in the order or agreement through the courts.

The MEPs resort to enforcement activities when they are unable to secure support payments. There are a number of enforcement mechanisms that can be used in helping to collect support payments. They can be seen as a graduated mechanism that intensifies with the complexity of the case. Overall, there are two distinct areas of enforcement: administrative and court enforcement. In general, most MEPs will first attempt to obtain payment through administrative means, as they usually produce more timely results than court enforcement. MEPs aim at securing regular and ongoing payments, and sufficient amounts to satisfy the obligations.

Administrative enforcement can range from telephoning the payor and trying to informally negotiate a payment, to a more formal enforcement process whereby the payor has the funds garnished from his or her wages. Court enforcement remedies range from a summons to appear, to a fine or jail.

The Family Law Assistance Services Section of the federal Department of Justice provides access to federal databases for searching for payors, allows for interception of federal funds¹⁴ and denial of federally administered licenses (*Family Orders and Agreements Enforcement Assistance Act*). Under GAPDA (*Garnishment, Attachment and Pension Diversion Act*), federal employee salaries and pensions are subject to garnishment.

Because MEPs operate under various provincial and territorial legislation, they differ in the nature and scope of their enforcement powers. Garnishments and attachments, for example, may be restricted by a provincial law that limits the percentage of a paycheque that can be attached. In some provinces, this is set at a 50% maximum, while in others it may be 40%. There may also be situations where a program is unable to enforce a support obligation at a certain time, for example, by court order staying or suspending enforcement. These types of provincial/territorial variations must be considered when assessing the information compiled in this report.¹⁵

2.4 Case closure

Withdrawal from a program varies by jurisdiction. Cases can be withdrawn by the recipient (opt-out) or by the program. Recipients can withdraw from the program for a variety of reasons including, for example, that they do not feel they need to have the order enforced. In many jurisdictions, the payor’s agreement is required in order for the recipient to withdraw from the program.

Rarely is the payor allowed to withdraw from the program, although this is allowed in Ontario (provided the recipient is in agreement), in British Columbia (if the payor was the one who registered the order and the recipient is in agreement) and in Saskatchewan, Alberta and the Northwest Territories if the payor was the one who registered the order.¹⁶ In Quebec, the payor and the recipient can jointly apply to the Court for an exemption from the MEP. In order for the Court to agree, the payor must provide the MEP with security (a sum of money, a letter of guarantee or a guarantee from a financial institution) covering payment of support for one month.

Generally, a case is closed or “terminated” if the terms of the order have expired, or either party dies. There may be situations where a MEP will close a case because it may be impractical to enforce. For example, if a recipient moves and cannot be located, the MEP might close the case.

14. Federal funds that can be intercepted include income tax refunds, employment insurance benefits, old age security, Canada Pension Plan benefits, interest on regular Canada Savings Bonds, and selected Agriculture programs.

15. See Statistics Canada, *Maintenance Enforcement Programs in Canada: Description of Operations 1999/2000 for more information on the operation of MEPs across Canada*.

16. It is considered advantageous by some payors to be registered, since the program handles all the payments to the recipient, and there is less contact between parties. Some payors prefer to have the program administer and independently monitor the payments made.

3.0 Overview of the Maintenance Enforcement Survey

3.1 Survey methodology

The Maintenance Enforcement Survey (MES) is an administrative survey that collects data from the case management information systems maintained by provincial and territorial maintenance enforcement programs (MEPs). The information systems were initially built to address an operational purpose, which is to assist the MEPs in monitoring and enforcing their registered caseload. As a result, some of the data may not fully comply with survey specifications.

Data are extracted from each MEP's automated information system according to the survey specifications. Computer interfaces map survey concepts to local system information and the data are then electronically compiled from the system and transmitted to the Canadian Centre for Justice Statistics.

The MES is an aggregate survey, meaning that there is no information on individual cases, and data are collected and reported for pre-defined categories. As a result, opportunities for further manipulation of the data to produce or derive new measures are quite limited. The data collection tables used by the survey were constructed during the identification of information needs and survey specifications in 1995.

3.2 Coverage

Currently, the MES has been implemented in seven provinces, which together account for about 90% of Canada's population. The survey is intended to be implemented nationally, and will eventually cover all cases for which the MEPs have responsibility to monitor and enforce. The provinces currently reporting data to the survey are not representative of the non-reporting provinces and territories. Moreover, it is estimated that MEPs handle less than one-half (40-50%) of all support orders and agreements in Canada.¹⁷ Many individuals prefer to remain outside of a MEP, perhaps because the support payments are being paid on time and in full and there is no need for the services of a maintenance enforcement program, or they may not have a written agreement in place. The MES survey data are not representative of support arrangements that exist outside the provincial/territorial MEPs.

3.3 Units of count

"Cases" registered with the MEPs are the unit of count for the survey. People associated with those cases (i.e., a payor, a recipient, the children), as well as court orders and domestic contracts giving rise to support obligations, are all components of cases registered.

The survey also collects dollar amounts of money that are due and paid. Dollar figures according to type of payment or arrears are included in some of the tables.

3.4 Content

The survey gathers information on maintenance enforcement cases, and on some of the key characteristics associated with those cases. Case flow and changes in the volume of cases can be measured over time. In addition, survey data provide information on financial matters, the processing of payments, and the tracing and enforcement actions taken by MEPs.

The types of information collected by the survey are listed below¹⁸.

- Caseload information: includes the number of cases of various categories, the sex and median age of payors and recipients, the number and median age of children receiving support, length of enrolment and the legislation under which the order for support was made;
- Information on financial matters: includes support amounts, compliance rates, information on arrears, frequency and amount of payments;
- Enforcement/case closure information: describes the types of actions that the programs initiate in order to enforce cases, and the closing of cases.

17. See Canadian Facts, Survey of Parents' Views of the Federal Child Support Guidelines, 2000.

18. Some of these informations are not collected by every jurisdiction.

3.5 Reported timeframes

Data are collected from the MEPs on both a monthly and yearly basis.

- **Annual tables:** Fiscal year tables cover the period April 1 to March 31 and provide data that summarize the nature and extent of work done throughout the year. Information such as median age of payors and recipients and median child support obligation is not prone to monthly fluctuations and is collected on a yearly basis. Other information measured on an annual basis includes dollar amounts processed and the number of enforcement actions taken.
- **Monthly tables:** As support payments are often paid monthly, the MES collects data on monthly payments due and received. Different times of the year may show different payment behaviour and with more data, seasonal or other patterns may begin to emerge which can be monitored and analysed.

Many of the data tables in the survey are “snapshot” tables, which means they provide counts of the various data measures at the end of the month or the end of the fiscal year. This measure is a reflection of the database at that point in time. Information that corrects or adjusts cases past month-end or year-end are not reflected in these end-of-period data counts. This means that the survey collects the best information available at the time of the snapshot. It will not capture new information coming to light, such as the payor having made a direct payment to the recipient, or a cheque-based payment being returned for non-sufficient funds.

3.6 Provincial/territorial differences

Section 2 described the operational differences that exist among maintenance enforcement programs, from how cases are enrolled and closed, to how they are enforced. In addition, because the survey data are obtained from operational information systems, there will be some deviations from survey specifications. The following paragraphs outline where these effects are known.

Prince Edward Island

In Prince Edward Island, no data are available for the authority of the order (*Divorce Act*, Provincial order, etc.), reason for case termination or withdrawal, and only partial data are available for payment history. Total payment amounts due exclude scheduled arrears.

Quebec

Quebec’s program requires that the payor set up a payment method at the outset, either through payroll deductions or a payment order. If by payment order, payors must remit

support payments directly to the Maintenance Enforcement Program and provide a security sufficient to guarantee one month of support payments. In certain cases, if the program is certain to recover the sum from the payor, the legislation allows for the MEP to provide an advance to the recipient to help ensure regularity of payments. Advances are considered to be support payments and must be repaid by the payor. As well, the legislation requires that payments go to the recipients on the 1st and 16th of every month. Quebec does not distinguish between types of recipients,¹⁹ and therefore could not report this information to the survey.

In Quebec, direct payment cases are included in the annual tables, but not the monthly tables.²⁰ Therefore, case counts for the annual tables will be greater.

Saskatchewan

Saskatchewan is unable to provide an accurate median age of children for whom there are support payments. Instead, this jurisdiction includes the ages of all children a couple has, regardless of whether or not they are covered by the support agreement.

Alberta

Alberta does not place initial enforcement action until 35 days following the completion of registration or the payment due date. Therefore, there will never be any cases less than 35 days old reported as in default.

British Columbia

In British Columbia, one practice that affects the survey data is the acceptance of direct payments of support. When a payor pays the recipient directly, the MEP does not record the payment until it receives notification, and as such, the case will be categorized as “in default” because it has no record of payment. As a result, the compliance rate will appear to be lower than it actually is. Another practice that may indirectly influence survey results is the fact that British Columbia legislation requires that all outstanding accounts be charged interest. No other jurisdiction has such a requirement. Although the dollars due and received for interest are not collected by the MES, this practice could influence payment behaviour.

National definitions do enable some comparisons between jurisdictions but always within the context of local administration. With greater participation in the survey and with

19. *Type of recipient refers to orders for children only, spouses only or for both the children and spouse. Please consult the Glossary for further details.*

20. *Direct payments are defined as payments made by the payor to the recipient which do not involve the Maintenance Enforcement Program.*

more MEPs supplying data, a more complete picture of the national context will emerge. Ongoing data collection will provide an opportunity to look at trends over time.

3.7 Confidentiality

Maintenance Enforcement Survey data have been subjected to a confidentiality procedure known as “random rounding” to prevent the possibility of associating the data with any identifiable individual. The technique of random rounding provides strong protection against disclosure, but does not

add significant distortion to the data. In this report, all MES data involving counts of individuals or cases are randomly rounded either up or down to the nearest multiple of 3. Thus, a case count of 32 would become either 30 or 33 when rounded.

It should be noted that totals are calculated from their randomly rounded components, rather than being rounded independently. Thus some small differences can be expected in corresponding values among various MES tables.

4.0 Survey results

This section presents fiscal year child and spousal support data for Prince Edward Island, Quebec, Saskatchewan, Alberta and British Columbia. Monthly snapshot data for these same provinces plus New Brunswick and Ontario are also presented.²¹ A number of selected tables derived from those data tables collected by the survey are provided at the end of the section. Some of the tables present the 5 years of annual data or the 48 months of monthly data that are now available.

The survey results are presented in three parts:

1. Case characteristics, including number of cases, interjurisdictional support order status, length of enrolment, and characteristics of recipients;
2. Financial management of cases, examining amounts due, compliance on those amounts, timeliness of payments, and level of arrears; and
3. Enforcement actions and case closure, looking at actions taken by maintenance enforcement programs (MEPs), and the closing of cases.

The reader should note that as a result of the rounding methodology, some small differences can be expected in corresponding values among various Maintenance Enforcement Survey (MES) tables.²²

4.1 Caseloads and their characteristics

Cases, consisting of payors, recipients, and court-ordered or voluntarily agreed support obligations are managed by MEPs. The MES counts a case if it is registered and there is a support obligation on the part of the payor that the MEP is monitoring and enforcing.

Interjurisdictional support order status

An important distinction in terms of workload for MEPs is whether a case exists within the confines of their borders or whether it crosses jurisdictional boundaries. The term that describes this situation is referred to as interjurisdictional support order status (ISO status). ISO status distinguishes three types of cases:

- Non-ISO cases. These are typically cases where the payor and recipient live in the same jurisdiction where the case is registered.
- ISO-in cases. These are cases that the MEP has been asked to enforce by another jurisdiction because the payor is known to reside or have assets in its jurisdiction.
- ISO-out cases. These are cases that have been sent to another jurisdiction for enforcement because the payor lives or has assets there.

The legislation that governs the enforcement of interjurisdictional support orders is called the *Interjurisdictional Support Orders Act*.²³ The purpose of this legislation is to allow one or both of the parties to obtain a support order under provincial legislation, to have an existing order recognized or varied, or to have an order enforced when in different jurisdictions.

The day-to-day caseload of a MEP consists of monitoring non-ISO and ISO-in cases and taking enforcement action when payments are not forthcoming. ISO-out cases are cases that have been sent to another jurisdiction for monitoring and enforcement because the payor lives and/or has assets there. Apart from two tables (Table 1 and Table 19), these ISO-out cases are excluded from the majority of case counts in the survey to avoid double counting – one MEP's ISO-out case may be another MEP's ISO-in case.

21. All fiscal year data for New Brunswick and Ontario and some fiscal year data for Quebec and Alberta are unavailable. See Section 3.5 for more information on reported timeframes.

22. Tables with corresponding values for the number of maintenance enforcement cases enrolled (excluding ISO-out cases) are: Tables 2, 3, 4, 5, 7, 8, 9, 14 and 15. Tables with corresponding values for the number of maintenance enforcement cases with arrears are: Tables 15, 16 and 17.

23. The ISO legislation has replaced REMO/RESO legislation that was put in place several decades ago. Older cases registered in MEPs still fall under REMO/RESO legislation but are included in the ISO case counts. With the exception of Quebec and Yukon, the ISO legislation was proclaimed in 2003 and 2004 in all provinces or territories. See Statistics Canada, Child and Spousal Support: Maintenance Enforcement Survey Statistics, 2001/2002 for more information on this legislation.

Maintenance enforcement cases by ISO status, for the five provinces that report these annual data, are presented in Table 1. In 2003/2004, MEP cases entailing day-to-day enforcement responsibilities (non-ISO and ISO-in cases) comprised the majority of cases, accounting for 99% of cases in Quebec, 96% in Prince Edward Island, 91% in Alberta, 86% in British Columbia and 81% in Saskatchewan. The three western provinces providing data reported larger proportions of interjurisdictional support order cases (ISO-in and ISO-out cases), with proportions of 23% in British Columbia, 25% in Alberta and 32% in Saskatchewan. This finding is fairly consistent for all years of data.

MEP caseload

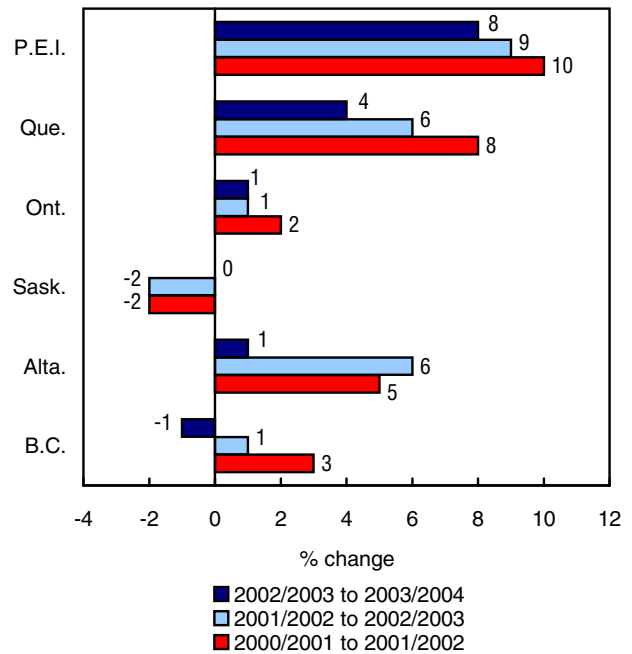

The caseload of maintenance enforcement programs increased in most provinces, based on changes in the number of cases enrolled (excluding ISO-out cases) at the end of the fiscal year (Table 2). Compared with March 2003, the caseload in March 2004 was: 2,500 in Prince Edward Island, up 7%; 102,300 in Quebec, up 4%; 176,700 in Ontario, up 2%; and 7,800 in Saskatchewan, up 2%. The caseload was fairly stable in British Columbia at 39,800 cases as of March 2004. In Alberta, on the other hand, there were 47,000 cases, down 3% from March 2003. In New Brunswick, 13,500 cases were enrolled, a 3% increase from April 2003, the first month for which data are available.

Because the number of cases enrolled in a maintenance enforcement program varies from one month to the next, comparing year-over-year changes in cases enrolled for March may mask a general trend in enrolment. Thus, another way of looking at caseload fluctuations over time is by calculating an average monthly count of cases enrolled during the fiscal year and examining how this figure changes over time. Results of this analysis confirm that enrolment in maintenance enforcement programs is increasing in 4 out of 6 provinces (Figure 1). For example, based on data from Table 2, the average monthly caseload for Ontario was 175,230 in 2003/2004 up about 1% from a figure of 173,960 in 2002/2003. Similarly in the other provinces, increases in average caseload were 1% in Alberta, 4% in Quebec and 8% in Prince Edward Island, increases that were smaller in 2003/2004 than in the previous years. Saskatchewan saw its average caseload stabilize, after two consecutive fiscal years of decrease. In British Columbia, the average number of cases enrolled declined by 1%.

Length of enrolment

Caseloads fluctuate over time as a result of new cases being enrolled and others being terminated. A single case may be enrolled and withdrawn a number of times over the life of a support order. For MEPs and policy makers, the length of time a case resides in a program is important for operational, budget and resource planning.

Figure 1
Percentage change in the average number of maintenance enforcement cases enrolled, 2000/2001 to 2003/2004¹

Notes:

1. ISO-out cases are excluded. Average annual enrolment is calculated by using monthly enrolment figures. This average is then used to measure the percentage change in caseload from one fiscal year to the next. The average for Quebec for 2000/2001 and for Prince Edward Island for 2000/2001 and 2002/2003 is based on 11 months of data.

Source: Statistics Canada, Maintenance Enforcement Survey.

During the 2003/2004 fiscal year, more than half of the cases enrolled in Prince Edward Island and Saskatchewan had been registered in the MEP for more than 5 years (Table 3). With figures of 56% and 59% respectively, these two jurisdictions have the oldest caseloads. In British Columbia, an equal proportion of cases had been enrolled in the MEP for 5 years or less versus more than 5 years. In Quebec, a smaller proportion of cases (34%) had been registered for more than 5 years.

These figures, in part, are a reflection of the length of time that the maintenance enforcement programs have been established in each province. The program in Saskatchewan has been in place since 1986, while in Prince Edward Island and British Columbia the date is 1988. Quebec's caseload, on the other hand, is much younger. On November 1, 1996, the information

system of the maintenance enforcement program was implemented, which resulted in a loss of information on date of enrolment for previously enrolled cases. Therefore, all cases have an enrolment date of November 1996 or later, thus explaining why the proportions are different from the other reporting provinces.

The proportion of older MEP cases has grown since 1999/2000. In 2003/2004, cases enrolled for more than 10 years accounted for 16% of enrolled cases in Saskatchewan (up from 5% in 1999/2000), 18% in British Columbia (up from 8%) and 19% in Prince Edward Island (up from 8%).

Source of orders and type of recipient

Maintenance enforcement programs enforce both court-ordered support of divorcing or separating parents and support obligations arising from domestic contracts such as separation and paternity agreements. Orders for maintenance or support can result from federal legislation divorce proceedings (*Divorce Act*) or through provincial/territorial legislation that may ultimately become part of a divorce proceeding.

Most obligations are the result of federal or provincial orders.²⁴ On March 31, 2004, 48% of support orders in Saskatchewan were under the federal *Divorce Act* and 39% were under provincial orders (Table 4). In British Columbia, on the other hand, 26% of cases were under the federal *Divorce Act*, while a considerably larger proportion of cases (68%) were under a provincial order.

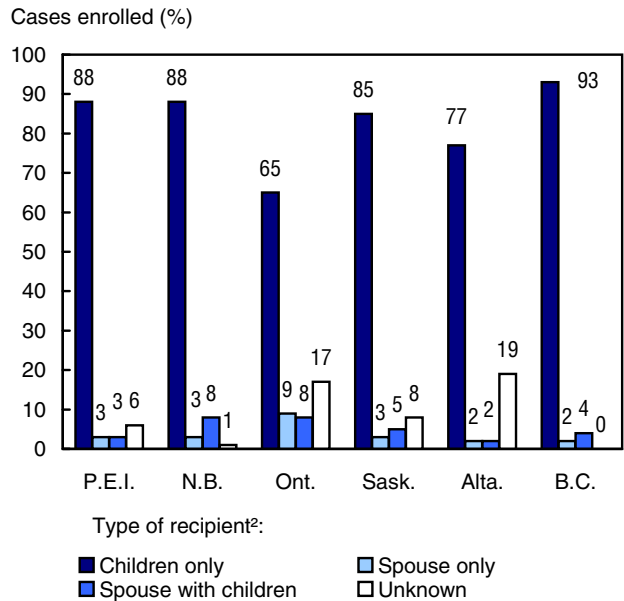

The results vary depending on who is receiving the support payments. Cases where the spouse alone or the spouse and children are receiving support are more apt to be under the authority of the *Divorce Act*. In Saskatchewan, for example, 77% of spouse with children cases and 76% of spouse only cases were under the *Divorce Act* compared with a figure of 45% for cases where the recipients were children only.

Characteristics of recipients, payors and children

Survey data indicate that MEPs operate primarily for the benefit of children. Of the cases registered with the reporting provinces on March 31, 2004, the large majority included a support amount for children. This included 97% of the caseload for British Columbia, 96% for New Brunswick, 91% for Prince Edward Island, 90% for Saskatchewan, 79% for Alberta and 73% for Ontario. A more detailed breakdown of these numbers in Figure 2 shows that the proportion of cases involving support solely for children ranged from 65% in Ontario to 93% in British Columbia. Spouse with children cases ranged from 2% of cases in Alberta to 8% in

Ontario and New Brunswick, and spouse only support cases accounted for 2% of cases in Alberta and British Columbia, the proportion rising to 9% in Ontario. These proportions remained almost unchanged from the previous year.

Figure 2
Maintenance enforcement cases enrolled, by type of recipient, at March 31, 2004¹

Notes:

- Figures may not total 100% due to rounding.
- 1. ISO-out cases are excluded. Data by type of recipient are not available in Quebec.
- 2. The "Unknown" type of recipient category includes a very small proportion of "Other" type of recipient cases.

Source: Statistics Canada, Maintenance Enforcement Survey.

The term "recipient" is also used to refer to the person who is living with, and has parental responsibility for, the children. In other words, the recipient is the person receiving the money, whether the money is destined for the children only, the recipient and the children, or the recipient only. The recipient is often but not always the mother. There are instances where the recipient is the father, a grandparent or an extended family member.

24. Couples may separate and decide to formalize their arrangement in a separation agreement. Other couples may obtain a provincial/territorial order for support. In either situation, where a couple pursues a divorce, these arrangements may be incorporated into the final Divorce order, or they may be revisited. If couples do not pursue a divorce, their arrangements as set out in the separation agreement or provincial/territorial order will continue. Parents may have paternity agreements setting out child support obligations that are also enforced.

Survey results indicate that in the large majority of cases, the recipient is a female and the payor is a male. On March 31, 2004, this was true for 95% or more of the cases in the three reporting provinces (Prince Edward Island, Saskatchewan and British Columbia) (Table 5). This finding is consistent with previous years.

The median²⁵ age of payors, recipients and children is very consistent for all three provinces. On March 31, 2004, the median age for recipients was 39 years in the three reporting provinces (Table 6). For payors, the median age was 41 years in Prince Edward Island and Saskatchewan and 42 years in British Columbia. The median age for children was 13 or 14 years in each of these jurisdictions. Median ages appear to be up slightly from their level in March 2000. This is not unexpected given that the length of case enrolment is increasing.

Social assistance

The social assistance status of a recipient is an important aspect of maintenance enforcement. All provinces and territories treat child support as income and deduct it in whole or in part from social assistance benefits received by recipients. If a parent is entitled to receive child support and makes an application for social assistance, the social benefits agency will require the parent to seek child support payments. The MES "assignment status" variable refers to those cases where some or all of the payment goes to the government rather than the recipient. This occurs when the government is providing financial support to the recipient, or has done so in the past, and therefore the support coming from the payor is used to defray these costs. It is to be noted that not all persons receiving social assistance need to assign their cases.

The proportion of assigned MEP cases varies from province to province (Table 7). As of March 31, 2004, 24% of cases were assigned in New Brunswick, 22% in Quebec, 16% in British Columbia and 14% in Prince Edward Island. The other reporting provinces show smaller proportions, with 10% or less of their cases being assigned. With the exception of New Brunswick, for which only one year of data is available, the proportion of assigned cases has decreased in all reporting jurisdictions from their level in March 2000 or 2001. This can be explained by a general decrease in the proportion of the population on social assistance that was observed in all the Canadian provinces between 1993 and 2003 (Roy, 2004).

4.2 Financial aspects of MEP caseload

The entire process of monitoring and enforcing by the MEPs stems from an order or agreement stipulating the payment of support. To register or enrol in a maintenance

enforcement program, a recipient or payor must have an order or agreement that has been court-ordered or filed officially with the court. The order or agreement will have a stated support amount and the frequency with which it is to be paid. These amounts are called "amounts regularly due".

An order may contain other amounts that are also enforceable by the MEP. These are usually called "event-driven amounts" or sometimes "lump-sum payments". They can be characterized as payments that must be paid when they come due, perhaps when a receipt or an invoice is produced. Examples would be payment for visits to the dentist or for yearly sports enrolment fees. Other payments that may be due in a month include scheduled arrears, fees, costs and penalties. For the purposes of the survey, these payments, plus payment amounts regularly due, are called "total payments due".

If an expected amount is received within the calendar month in which it became due, the case is considered by the survey to be in compliance. If the payment has not been made, or if the amount paid is insufficient to meet the full amount, the case is considered to be in default.

Arrears refer to money owing from earlier missed payments. As a result of either a court order or voluntary payment arrangement, an amount of arrears may end up being subject to a schedule. As long as the payment schedule is being adhered to, it is likely no additional enforcement action can be taken. Any non-scheduled arrears are those arrears that are owed from an earlier time, and for which there is no payment schedule established. The full amount is due and enforceable.

It is possible for a case to have arrears and be in compliance with total expected payments at the same time. This would be the situation if the payor were making all the current payments due, including the scheduled arrears payment.

Amounts regularly due

Table 8 presents the distribution of cases by regular monthly payments due for March each year. In the seven reporting provinces, a large proportion of cases (46% to 68%) involved a regular monthly payment of \$1 to \$400. Generally, the distribution was similar for cases involving a payment of \$1 to \$200 and those involving a payment of \$201 to \$400. There were two exceptions; a larger percentage of cases were found in the first category for New Brunswick, whereas the opposite trend was observed in Quebec. The proportion

25. The median is the middle point of the age distribution, where if the ages are arranged in increasing or decreasing order, one-half of the group is above the middle-point and one-half below it.

of cases across the provinces involving a monthly payment amount above \$1,000 ranged from 1% to 5%. This pattern is consistent over the four years of available data.

The distribution of MEP cases by total payments due (rather than regular payments) was found to be quite similar. Most cases had total monthly payments of \$400 or less.

Another view of amounts regularly due is presented in Table 9. It shows the median regular monthly payment due by type of recipient and number of children. On March 31, 2004, the median monthly amount due for cases having one child was \$200 in each of the two reporting provinces. This amount increased gradually as the number of children covered in the support order increased. In particular, the median for cases having 2 children was \$300 in Saskatchewan and \$350 in British Columbia. For cases with 3 or more children, the median amount due monthly was \$395 in Saskatchewan and \$414 in British Columbia. This pattern is consistent when case includes spouse and children. Finally, the median amount due for spouse only cases was \$300 and \$500 in Saskatchewan and British Columbia respectively.

Compliance

There are many ways of examining compliance, and consequently many definitions in use. However, timeliness and sufficiency of payment are the two key components of compliance. For the survey, compliance is measured on a monthly basis in relation to the amount of money expected to be paid in a given month. It is measured as of the last day of the month. This means that cases having an amount due earlier in the month, for example the 15th, can pay late, but still be considered by the survey to be in compliance if the money is received by the last day of the month. Conversely, if a payment is due on the 30th of the month and is received one day past month-end, the case is considered in default for that month.

Compliance is also based on full payment. A partial payment, no matter how close to the amount due (e.g., 90%), would not satisfy the obligation, and so for the purposes of the survey would not be considered to be in compliance. Thus, the monthly figures are based on the number of cases in full compliance – having made the full payment of the amount due by month-end.

Compliance can be measured in terms of both regular and total monthly payments due. As shown in Table 10, the majority of cases were in compliance with their regular monthly payments for March of 2004. The figures ranged from 55% of cases in Prince Edward Island to 79% of cases in Quebec²⁶.

Compliance varies somewhat by the amount of regular payment due. In the previous years, higher levels of compliance were generally found in the “middle” payment categories, while lower levels were seen at the two extremes. In March 2004, no such pattern could be observed, the trends being different from one province to another. However, what was similar between reporting jurisdictions were compliance difficulties in the \$1 to \$200 category. With the exception of Prince Edward Island and New Brunswick, the lowest compliance rate of each province was found in this payment category, with figures ranging from 42% in Ontario to 68% in Quebec. One possible explanation could be that higher support amounts generally indicate greater income and employment stability, thus an increased likelihood that the paying parent is able to deal with unforeseen situations (disruption in employment, unanticipated major expenses, etc.) while maintaining child support payments.

A similar distribution was observed for MEP cases in compliance with total payments, which include regular payments due plus event-driven payments, scheduled arrears, and fees, costs and penalties. However, compliance with total payments tends to be slightly lower than compliance with regular amounts due.

Table 11 provides an additional element, presenting compliance with regular payments due by type of recipient. It shows that there is variation in compliance by type of recipient. In each reporting province, compliance is highest for spouse only recipients, ranging from 66% in New Brunswick to 91% in Ontario.

Another view of compliance shows the amount of dollars that were paid as a proportion of the amounts due. During 2003/2004, MEPs in the four provinces reporting these annual data were successful in collecting most of the regular dollars due (Table 12). Quebec collected 92% of the approximately \$432 million due for that year, Saskatchewan collected 78% of the approximately \$30 million due, British Columbia collected 71% of the approximately \$152 million due, and Prince Edward Island collected 66% of the approximately \$8 million due.²⁷ These figures are based on cases administered, that is all cases that were enrolled at some point during the year.

26. In certain cases if the program is certain to recover the sum from the payor, Quebec legislation allows for the MEP to provide an advance to the recipient to help ensure regularity of payments. Advances are considered to be support payments and must be repaid by the payor.

27. British Columbia maintains a policy of allowing direct payments to be made and received by its clientele throughout the case duration, and since most of these direct payments are not reported until after the survey data are collected, a substantial number of payors are reported as not having paid, even though they actually have.

Compliance can vary from one month to the next. The 48-month view of compliance presented in Table 13 provides some sense of this. In individual provinces compliance increases or decreases by as much as 7 percentage points in a given month. Even changes such as these, or in fact no net change in compliance rates, can mean that many individual cases are falling in and out of compliance regularly. These observations are consistent with findings from the National Longitudinal Survey of Children and Youth. Survey results indicated that approximately 45% of children in their mother's custody had moved from one "compliance" category (regular on time, regular at times late, irregular, and not for at least six months) to another within a 2-year period (Juby, Le Bourdais, and Marcil-Gratton, 2003). This has implications for MEPs in that compliance or non-compliance is never a given. It may vary greatly over the life course of a single case, thus requiring constant monitoring of their caseloads by the MEPs.

The monthly snapshot data give MES information users an indication of possible changes in payment behaviour over time due, for example, to policy changes, enforcement measures, and public awareness campaigns. This kind of information will help address questions concerning improvements in enforcement measures, and monthly payment patterns. Information as to how people are keeping up with what they owe, in relation to the size of the order or the number or type of dependants, will also help with future program and policy development efforts.

Arrears history and level

Arrears refer to money owing from earlier missed payments. Maintenance enforcement programs can register cases with arrears already accumulated.²⁸ Arrears can also accrue during the time the MEP has management of the case, should payments not be made and enforcement fail to secure sufficient payment. Arrears are sometimes subject to court-ordered or negotiated scheduled payment plans. When these occur, the amount of arrears may be gradually repaid over a period of time. As long as the payment schedule is being adhered to, it is likely no additional enforcement action can be taken.

Table 14 provides a view of the arrears history of MEP cases in four provinces, Prince Edward Island, Quebec, Saskatchewan and British Columbia. Data available from these provinces indicate that over one-half of cases had a history of payment problems prior to entering a maintenance enforcement program. Of the cases enrolled on March 31, 2004, 60% of those in Saskatchewan, 66% of those in Quebec and 69% of those in British Columbia entered the program with arrears.²⁹ The figure for Prince Edward Island is not comparable as the arrears status at entry was not known for 31% of cases.

Of these cases that were enrolled with arrears, 75% of the cases in Quebec, 55% in Saskatchewan and 45% in British Columbia had improved their arrears status by March 2004. That is, their arrears either decreased or were paid off. Arrears remained constant in roughly 1% of cases in the three provinces.

The remaining cases (31% in Quebec and British Columbia, as well as 40% in Saskatchewan) entered the MEP without arrears. Of these cases, about 53% in Saskatchewan, 55% in British Columbia and 81% in Quebec remained arrears free. The remainder saw an increase in their arrears.

Table 15 presents MEP case counts with arrears, as well as the dollars associated with those arrears. Readers are cautioned against calculating an average per case amount of arrears since there can be a great range of arrears amounts due on cases. As some cases may account for tens or hundreds of thousands of dollars in arrears, and others will have very modest amounts due, any such calculation is inappropriate.

With the exception of New Brunswick, for which only one year of data is available, the proportion of cases with arrears has remained stable over the years for most reporting provinces. The two exceptions were Quebec and Alberta, where there has been a decline in the proportion of cases with arrears from their level in March 2000 or 2001. Furthermore, most provinces reported an increase in the dollar amount of arrears, but this is not surprising since the number of cases with arrears has generally increased as well.

Proportion and timeliness of payments

When looking at the distribution of cases with arrears by the percentage received of the regular monthly amount due, survey data indicate that cases tend to fall within two extremes. In March 2004, most cases that had arrears either made the regular monthly payment in full (ranging from 41% in Prince Edward Island to 55% in Quebec) or they made no payment (ranging from 30% in Quebec to 47% in Prince Edward Island) (Table 16). Over the five years that data are available, this pattern has remained consistent for each reporting province.

There can be many reasons why a payor may not have paid within the past month, or be up-to-date in making expected

28. In some cases, the recorded arrears will be lower if information is received by the MEP that direct payments have been made between the parties. In other cases, the arrears may be higher but the recipient is unable to provide an affidavit establishing arrears.

29. It should be noted that upon registration, some recipients are unable to reconstruct their payment history and so are unable to produce an affidavit establishing arrears. Other recipients may decide not to pursue past arrears. These cases have to be registered as not having any arrears, even though they are, in fact, non-compliant cases right from the start.

payments. For example, there are stays of enforcement that occur on some cases, or other impediments to enforcement such as prolonged periods of social assistance, unemployment, disability, or incarceration. These often unpredictable situations can leave the recipient without support payments for periods ranging from a few weeks up to 12 months or more.

The distribution of cases with arrears according to the elapsed time since the last payment was received is shown in Table 17. In all seven reporting provinces, as of March 2004, one-third to one-half of the cases with arrears had made a payment within one month. In Quebec, Ontario, Alberta and British Columbia, these proportions were higher than they were in March 2000 or 2001. Within three months, the proportion of cases having made a payment ranged from 44% in Ontario to 69% in Quebec. However, there are more difficult cases, those where a payment has not been made in over a year and those where no payment has ever been made. These cases, which accounted for 18% to 47% of the arrears cases, might signal the loss of contact with the payor and therefore indicate that trace and locate activities have not been successful. These cases may also involve situations where there are limitations put on the possible enforcement actions, such as stays of enforcement or laws that limit the attachment and garnishment of wages (see Section 2.3).

This information on the length of time elapsed since payment on cases with arrears is an important measure in terms of workload of MEPs. Cases that rarely or never make payments require more and stronger enforcement strategies. Unfortunately, the survey is unable to link any enforcement activity with a specific payment received, and there will be many cases that have had considerable attention, but the actions have not yet resulted in payment being made.

4.3 Enforcement/Case closure

Enforcement actions

Maintenance enforcement programs can undertake a variety of actions to enforce current payments or existing arrears. There are two main categories of enforcement actions: administrative enforcement and court enforcement. Administrative enforcement by the MEP includes jurisdictional garnishment and attachment (of money owed to the payor) and MEP traces (attempts to find the payor using jurisdictional information banks). Court enforcement occurs before a judge and can include default and committal hearings.

Enforcement actions increase in intensity in response to more difficult cases and complex situations. As a matter of practice, administrative enforcement measures are

exhausted early in the process, with the provincial/territorial avenues being taken first. In most jurisdictions, federal enforcement assistance, in the form of federal tracing, federal garnishment and federal license denial, are taken after most provincial/territorial avenues have been exhausted. If those mechanisms should fail to generate payment, MEPs then have court enforcement activities as an option, and these are generally taken as a last resort.

As Table 18 shows, in 2003/2004, the three reporting provinces enforced MEP cases using different types of enforcement actions. In British Columbia, trying to find the payor or “tracing” was the most often performed administrative enforcement activity (35% of all administrative enforcement activities) whereas in Saskatchewan, this type of action ranked third (18%), after demand for information (35%) and jurisdictional garnishment and attachment (21%). Even though jurisdictional garnishments and attachments are not as widely used in British Columbia, their use has been increasing over the years; from 6% in 1999/2000, this type of action made up 12% of all enforcement activities in 2003/2004. The MEP in Prince Edward Island, on the other hand, frequently used actions under the “other” category. This category includes an action often used in this province called “notice of default hearing”, meaning that defaulters are sent a notice of default hearing and are given the option of discussing their situation with the MEP director and the legal counsel for the MEP prior to appearing before a judge.

Another category of administrative actions falls under federal legislation. The available enforcement actions are federal trace (attempt to find the payor using federal information banks), interception of federal funds (for example an income tax refund), federal license suspension (for example a passport or transport license) and federal garnishment of salaries and pensions. In all three reporting provinces, interception of federal funds was the most widely used administrative action under federal legislation. In British Columbia, suspension of federal licenses was also occasionally performed.

Data from the three reporting provinces indicate that very few court-based enforcement activities were undertaken. Court enforcement activities made up approximately 1% of all reported enforcement activities during 2003/2004 for Saskatchewan, 2% for British Columbia and about 4% for Prince Edward Island. Of the various kinds of court enforcement activities, default hearings were the most widely used in Prince Edward Island and Saskatchewan. Activities that fell under the “other” category, which include issuing a warrant for arrest, appointing a trustee in bankruptcy, and issuing writs for seizure and sale, were most widely used in British Columbia.

Overall, the distribution of enforcement activities remained consistent with what was reported in the previous years.

Case closure

As indicated in Section 4.1, MEP cases can be enrolled in the program for a short period of time or for many years. Eventually though, a case will be closed or terminated. There can be a number of reasons for the termination of a case within a maintenance enforcement program.³⁰ As shown in Table 19, there are provincial variations in these reasons. In 2003/2004, expiration of the support

order accounted for 78% of case terminations in Quebec while in Alberta, withdrawal by either the recipient or payor was the most frequent reason for termination (55%). In British Columbia, withdrawal by the program, withdrawal by either the recipient or payor, and expiration of the support order each accounted for about one-third of terminated cases.

30. *The Maintenance Enforcement Survey does not count the activity of opting in or out of maintenance enforcement programs. Terminations are only counted when they are the last event in the fiscal year. See Section 2.5 for a description of jurisdictional MEP withdrawal policy.*

4.4 Data Tables

Table 1
Maintenance enforcement cases enrolled, by ISO (interjurisdictional support order) status, by fiscal year¹

		Cases enrolled		Non-ISO	ISO-in	ISO-out

^r revised.

1. ISO refers to interjurisdictional support orders. The provinces and territories have enacted legislation to ensure that orders/agreements can be enforced beyond their borders. Non-ISO cases are typically cases where both parties live in the same province/territory. ISO-in cases are cases that the province/territory has been asked by another jurisdiction to enforce because the payor lives and/or has assets inside their borders. ISO-out cases are cases that the province/territory has sent to another jurisdiction for enforcement because the payor lives and/or has assets outside their borders. ISO was formerly referred to as Reciprocal Enforcement of Maintenance Orders (REMO) status. These annual data are not available for New Brunswick and Ontario.
2. In Quebec and Alberta, cases enrolled include direct payment cases. Direct payments are defined as payments made by the payor to the recipient which do not involve the maintenance enforcement program.

Notes:

Percentages may not total 100% due to rounding.

.. not available for a specific reference period.

... not applicable.

1. ISO-out cases are excluded. These annual data are not available for New Brunswick, Ontario and Alberta.

2. In Quebec, length of time enrolled for MEP cases will not exceed 8 years because the MEP information system was implemented by the Ministère du Revenu du Québec in November 1996, thus setting date of enrolment at this date for previously enrolled cases. In 2001/2002, length of enrolment did not exceed 6 years; this explains why the percentage of cases in the >5 to 7 years category doubled in 2002/2003. Cases enrolled include direct payment cases.

3. In Saskatchewan, an increase in staff, judges, and the 1997 Child Support Guidelines may have increased the number of cases processed in that year. In 1999/2000, this corresponds with cases of 3 to 5 years duration with the maintenance enforcement program and, in 2003/2004, it corresponds with cases of 7 to 10 years duration.

	2003	39,948		7,782	19
	2004	39,774		6,435	16

Notes:

.. not available for a specific reference period.

1. ISO-out cases are excluded.

2. Assignment status indicates that the recipient is receiving social assistance and has assigned their entitlement to receive support payments to the government.

3. In March 2002, a verification study between the Alberta MEP and Human Resources and Employment found that a large number of cases that the MEP had classified as assigned, were actually no longer assigned. Subsequent data reconciliation accounts for the observed decrease in assigned cases between 2001 and 2002.

4. The drop in the number of assigned cases in British Columbia between 2002 and 2003 is a result of policy changes within government to change criteria for the granting of income assistance, resulting in fewer parents on income assistance.

Notes:

.. not available for a specific reference period.

- ISO-out cases are excluded. Regular payments are the ongoing amount ordered or agreed to. Compliance in this instance indicates that the regular amount expected in the month was received. The figure for compliance on total cases includes cases where no monthly payment is due. As cases with no payment in a month are coded as 100% compliant, the compliance for total cases may be higher than it would be if based solely on the numbers for the different payment categories shown in this table.
- Prince Edward Island has a small number of cases. Consequently, a small change in the number of cases in compliance can result in a large change in the percentage of cases in compliance. This helps explain the large shift in compliance between 2002 and 2003 for the \$1,001-2,000 payment category.
- In certain cases if the program is certain to recover the sum from the payor, Quebec legislation allows for the MEP to provide an advance to the recipient to help ensure regularity of payments. Advances are considered to be support payments and must be repaid by the payor.
- Ontario may have some cases that paid beyond month end that are included as having made a payment in the month.
- British Columbia maintains a policy of allowing direct payments to be made and received by its clientele throughout the case duration, and since most of these direct payments are not reported until after the survey data are collected, a substantial number of payors are reported as not having paid, even though they actually have.

Notes:

.. not available for a specific reference period.

1. ISO-out cases are excluded. Cases administered include cases registered for at least part of the year, i.e. cases enrolled and cases terminated. The amount due represents the regular monthly amount due for the entire year. These annual data are not available for New Brunswick, Ontario and Alberta.
2. Excludes those cases that only have other types of payments due (scheduled arrears, event-driven payments, and fees, costs and penalties).
3. In certain cases if the program is certain to recover the sum from the payor, Quebec legislation allows for the MEP to provide an advance to the recipient to help ensure regularity of payments. Advances are considered to be support payments and must be repaid by the payor.
4. British Columbia maintains a policy of allowing direct payments to be made and received by its clientele throughout the case duration, and since most of these direct payments are not reported until after the survey data are collected, a substantial number of payors are reported as not having paid, even though they actually have.

Notes:

.. not available for a specific reference period.

1. ISO-out cases are excluded. Regular payments are the ongoing amount ordered or agreed to. Compliance in this instance indicates that the regular amount expected in a month was received by the end of the month.
2. Due to a problem with their information system, financial data are not available for the month of September 2003 in New Brunswick and for the month of February 2004 in Ontario.
3. In certain cases if the program is certain to recover the sum from the payor, Quebec legislation allows for the MEP to provide an advance to the recipient to help ensure regularity of payments. Advances are considered to be support payments and must be repaid by the payor.
4. Ontario may have some cases that paid beyond month end that are included as having made a payment for the month.
5. British Columbia maintains a policy of allowing direct payments to be made and received by its clientele throughout the case duration, and since most of these direct payments are not reported until after the survey data are collected, a substantial number of payors are reported as not having paid, even though they actually have.

	Arrears have been paid off	261	11	37,623	31	1,506	19	6,756	17
Unknown		762	31	3,717	3	0	0	0	0
Total		2,466	100	120,000	100	7,842	100	39,780	100

Notes:

Percentages may not total 100% due to rounding.

1. ISO-out cases are excluded. At entry into a maintenance enforcement program, arrears status may be unknown until an accurate balance is produced. Therefore, some payors can actually be in arrears but be recorded as having no arrears. These annual data are not available for New Brunswick, Ontario and Alberta.
2. Prince Edward Island has a high number of unknowns because of a change in its information system.
3. On November 1, 1996, the Ministère du Revenu implemented the information system of the maintenance enforcement program. When that happened, Quebec knew the amount of arrears due at the time, but could not establish the arrears status at entry for the cases registered before that date. These "unknown" cases account for approximately 3% of Quebec's caseload.

	2004	39,774	26,421	66	269.9

Notes:

.. not available for a specific reference period.

1. ISO-out cases are excluded. Readers are cautioned against calculating an average per case amount of arrears. Some cases have tens or hundred of thousands of dollars of arrears, while others have a very small amount. The average will be influenced by these cases at either end of the range.
2. In British Columbia, dollars due and received for interest have not been included. British Columbia maintains a policy of allowing direct payments to be made and received by its clientele throughout the case duration, and since most of these direct payments are not reported until after the survey data are collected, a substantial number of payors are reported as not having paid, even though they actually have.

.. not available for a specific reference period.

... not applicable.

1. ISO-out cases are excluded. Includes cases with arrears that are still enrolled.

2. In certain cases if the program is certain to recover the sum from the payor, Quebec legislation allows for the MEP to provide an advance to the recipient to help ensure regularity of payments. Advances are considered to be support payments and must be repaid by the payor.

3. Saskatchewan's data for March 2000 counted cases that paid on the last day of the month as unknown, rather than being attributed to the 1-30 day elapsed time category. Subsequent data reporting has corrected this anomaly.

4. Alberta policy allows 35 days following the completion of registration for the payor to make the first payment. Therefore, there will never be any cases less than 35 days old reported as in default.

5. British Columbia maintains a policy of allowing direct payments to be made and received by its clientele throughout the case duration, and since most of these direct payments are not reported until after the survey data are collected, a substantial number of payors are reported as not having paid, even though they actually have.

Total Court Enforcement Actions	558	100	105	100	3,294	100

Notes:

Percentages may not total 100% due to rounding.

1. ISO-out cases are excluded. Cases administered includes all cases registered for at least part of the year, i.e., cases enrolled and cases terminated. More than one action may be associated with the same case. These annual data are not available for New Brunswick, Quebec, Ontario and Alberta.
2. In Prince Edward Island, other administrative enforcement actions are quite high because this category includes "notice of default hearing". This action is frequently used in this province and means defaulters are sent a notice of default hearing and are given the option of discussing their situation with the MEP director and the legal counsel for the MEP prior to appearing before a judge.
3. FOAEA refers to the Family Orders and Agreements Enforcement Assistance Act. GAPDA refers to the Garnishment, Attachment and Pension Diversion Act. See Glossary for more information.
4. Other kinds of court activity include issuing a warrant for arrest, appointing a trustee in bankruptcy, and issuing writs for seizure and sale.

5.0 Appendix A: Glossary of terms

Administrative survey

An administrative survey uses data that were collected by another agency or group for its own purposes. While the data collected were designed to assist decision-making or monitoring by the original agency, data can be extracted for research purposes providing a source for this information without having to mount a separate survey.

Aggregate survey

This refers to a survey where information on individual cases is not collected, but where data are summarized, collected and reported for pre-defined categories. More specifically, computer interfaces map survey concepts to local system information and the data are then electronically extracted from the system in aggregate form.

Appointment of receiver

This refers to action taken by a master/court administrator or a judge where a receiver is appointed to examine the payor's financial situation.

Arrears

Arrears refer to money owing from earlier missed payments. As a result of either a court order or voluntary payment arrangement, an amount of arrears may end up being subject to a schedule. As long as the payment schedule is being adhered to, it is likely no additional enforcement action can be taken. Any non-scheduled arrears are those arrears which are owed from an earlier time, and for which there is no payment schedule established. The full amount is due and enforceable.

It is possible for a case to have arrears and be in compliance with total expected payments at the same time. This would be the situation if the payor were making all the current payments due, including the scheduled arrears payment.

Assignment status

This identifies whether the recipient is receiving social assistance and has had his or her case formally assigned to the Crown, or it may signify that arrears exist and that when collected, should be used to recover Social Assistance payments previously paid. Monies that are collected on

behalf of the recipient on social assistance are either paid directly back to the provincial/territorial government or are reported and then deducted from the next assistance cheque.

Authority for the order

Support obligations enforced by the MEPs are the product of a court order or an agreement between the recipient and the payor. Orders for support may be the result of consent between the parties or a contested court hearing, and may be granted either under the federal divorce legislation, or the applicable provincial/territorial maintenance legislation.

Cases enforced (cases administered)

This includes all cases that were enrolled with the MEP at some point during a period of time, for example a year. It is a measure of all the cases for which the MEP had responsibility to monitor and enforce. Thus it includes both enrolled and terminated cases, but excludes ISO-out cases.

Cases enrolled

This includes all cases that are enrolled with the MEP at a particular point in time. It includes cases for which the MEP is responsible to monitor (ISO-out cases) as well as those for which it is responsible to monitor and enforce (non-ISO and ISO-in cases).

Collection calls

This refers to an enforcement activity that involves the phoning of payors to demand payment.

Committal hearing

This refers to the hearing held when a payor defaults on an order where the penalty is jail.

Compliance/default

For purposes of the survey, compliance means that at least the amount expected in a month is received. Cases where there is nothing due in a month are counted as being in compliance. Excess payments or early payments are not considered separately. Cases not in compliance are in default.

Cases in compliance may also have arrears, either non-scheduled or scheduled. The determination of compliance is only made against the current amount due in a month.

Credit Bureau reporting

Credit Bureau reporting occurs when a MEP advises the Credit Bureau of payors who are in arrears. This lets other potential credit granters know of the debt so they will take this into consideration before allowing the payor to take on a new obligation that might be affected by the support obligation.

Default hearing

This refers to a hearing before a master/court administrator or judge to determine what action may be appropriate in the face of a failure to make support payments.

Demand for information

This includes all demands (usually letters) sent where the maintenance enforcement program is asking for information. Letters can be sent to the recipient, the payor, or some other party, such as an employer.

Demand for payment

This includes all demands (usually letters) sent where the maintenance enforcement program is asking for payment. The letter could be to the payor or some other party, such as an employer who has not sent in the money from a garnishment order, for example.

Direct payments

Direct payments are defined as payments made by the payor to the recipient, as stipulated by order/agreement which do not involve the maintenance enforcement program other than for adjustments to arrears, or for notification of failure to continue direct payment.

Enforcement activity

Various methods can be employed by a MEP to enforce an outstanding payment. Activities taken on a case can be categorized into three main types according to who conducts the procedure:

- Administrative activities are those mechanisms employed by the MEP itself, and would include demands for information, jurisdictional garnishment and attachment and Credit Bureau reporting as examples.
- Quasi-judicial enforcement are activities undertaken by a master or court administrator, and may involve conducting a default hearing.

- Court-based enforcement involves court and judge time and is generally employed as a last resort. These tend to be more serious enforcement actions, involving default hearings, issuing of warrants, and default orders, and may culminate in fines or jail.

Event-driven payments

This refers to monies that are due because of some situation that has arisen if provided for in the order or agreement. For instance, an event-driven payment could be for tuition, dental work, lessons, etc.

Examination of payor

This refers to any and all activity taken by the maintenance enforcement program to examine a payor with respect to assets, and liabilities. In some jurisdictions, this action can be undertaken by administrative staff, or court administrators.

Execution order

This refers to the order made by a judge to liquidate assets.

Family Orders and Agreements Enforcement Assistance Act (FOAEA)

Under the three parts of the federal *Family Orders and Agreements Enforcement Assistance Act (FOAEA)*, MEPs can access different services provided by the Family Law Assistance Service (FLAS) of the federal Department of Justice. Part I allows for requests to search various federal databanks to determine the location of the payor. Part II allows for the interception of federal money owing to a payor. This most frequently takes the form of intercepting an income tax refund. Part III allows the MEP to apply through FLAS to the applicable federal department to have federally-administered licenses revoked or denied. This encompasses passports and certain transport (aviation and marine) licenses.

Federal garnishment

This refers to garnishments made pursuant to the *Queen's Regulations*, and the *Garnishment, Attachment and Pension Diversion Act (GAPDA)*.

Federal licence suspension

This refers to the *Family Orders Assistance Enforcement Act (Part III)* which allows the denial of passports, aviation licences, and marine certificates.

Federal trace

This refers to the request for a federal trace under the *Family Orders Assistance Enforcement Act* (Part I).

Garnishment, Attachment, and Pension Diversion Act (GAPDA)

Under the *Garnishment, Attachment and Pension Diversion Act* (GAPDA), federal employee salaries and pensions are subject to garnishment.

Garnishment and attachment

This refers to the legal redirection of money owed to a support payor by another person or a corporation. A garnishment is referred to as a wage attachment in some jurisdictions. Most MEPs are able to issue their own garnishments and attachments, without court involvement.

Interception of federal funds

Under the *Family Orders Assistance Enforcement Act* (Part II), the maintenance enforcement program can intercept federal funds, such as income tax refunds, employment insurance benefits, old age security, Canada Pension Plan benefits, interest on regular Canada Savings Bonds, and selected Agriculture programs.

Interception of provincial funds

This refers to activity taken to obtain provincial moneys that may have been due.

ISO status

Formerly referred to as REMO or RESO status, ISO (interjurisdictional support order) status indicates whether cases cross jurisdictional boundaries, usually because the payor and recipient live in different provinces, territories or countries. Cases are classified according to three categories:

- **Non-ISO cases**

These are typically cases where both parties live within the jurisdiction where the case is registered. Additionally, where parties conduct business, bank, or have assets in a jurisdiction, they may be registered there without residing there.

- **ISO-in cases**

These are cases that the jurisdiction has been asked to enforce by another jurisdiction because the payor is known to reside and/or have assets in its jurisdiction.

- **ISO-out cases**

These are cases that have been sent to another jurisdiction, and are registered there for enforcement purposes because the payor lives and/or has assets there.

For cases that cross jurisdictional boundaries, the provinces and territories have introduced new legislation, the *ISO Act*. The purpose of this legislation, as with the REMO/RESO legislation that preceded it, is to allow one or both of the parties to obtain a support order, to have an existing order recognized or varied, or to have an order enforced.

Jurisdiction

This describes the province or territory.

Jurisdictional garnishment

This refers to the formal process whereby an amount is deducted from a payor's salary or wages, or other source of income on a regular basis.

Land registration

This refers to actions taken to encumber the sale of specific real estate. A support order may be registered in the Land Registry Office in the jurisdiction against the payor's land. Upon registration, both the ongoing support obligation and any arrears owing become a charge on the property. The charge may be enforced by sale of the land.

Maintenance enforcement plan trace

This refers to all attempts to find the payor using jurisdictional information banks.

Motor vehicle license intervention

A motor vehicle license intervention may be placed in order to prevent the renewal of licenses (and in some jurisdictions, motor vehicle-related services) and/or suspension of driving privileges prior to satisfying the support obligation.

Order forfeiture of security

This refers to action taken by a master or court administrator where final authority is given to seize a security.

Order to provide information

This refers to a court order to provide information, including the payor's financial affairs.

Payor

The payor is the person named in the order/agreement who provides the support payments.

Personal property lien

Support payments in arrears can be registered as a lien or charge against any personal property (e.g. motor vehicle) owned or held by the support payor in the jurisdiction. Registration affects the ability of the payor to sell or finance the encumbered personal property.

Reason for termination

Cases will terminate or cease to be enrolled in a MEP for a variety of reasons. For example, orders expire as children age, the payor or recipient may die, or the recipient or payor may choose to withdraw from the program. In some instances the program may close the case depending upon its policy. For example, a MEP might close a case if the recipient cannot be located or if the recipient is accepting direct payments contrary to the program's policy.

Recipient

The recipient is the person named in the order/agreement to receive the support and is generally the parent who has parental responsibility for the children. Sometimes the recipient is a grandparent or another person responsible for the children. The money the recipient receives could be for the benefit of the recipient, for dependent child(ren), or for both.

Register order against personal property

This refers to the registration of the maintenance order against property of the payor.

Regular payments

This refers to the amount ordered or agreed to, expressed as a monthly payment due and includes the regular ongoing amount due in one month. Scheduled arrears are not included.

Total payments

This refers to all monies for support, expressed as a monthly payment. This amount includes the regular amount expected for a given month plus scheduled arrears, event-driven payments, and fees, costs and penalties due.

Voluntary payment arrangement

This refers to an arrangement made by the maintenance enforcement program and agreed to by the payor where a voluntary payment schedule is established. The voluntary assignment of wages is included.

Writ of execution

This refers to the actions taken by the maintenance enforcement program that result in payment, for example the seizure and sale of a payor's assets.

Writ of seizure and sale

A legal document by which a sheriff in a jurisdiction where the writ is filed can be authorized to seize either personal property (e.g. motor vehicle) or real property (e.g. land) of a support payor in default and to sell the property to satisfy the support debt. A writ of seizure and sale can also affect the ability of a payor to finance or sell the encumbered property.
