Notice of Smog Advisory

Today, the Ontario Ministry of the Environment issued a *Smog Advisory* for tomorrow, May 27, 2006 for the following forecast regions:

Elgin	Windsor-Essex-Chatham-Kent
-------	----------------------------

A *Smog Advisory* is issued when there is a high probability for elevated smog levels the next day.

This is the first *Smog Advisory* that the Ontario Ministry of the Environment has issued for 2006.

Hot, sunny conditions combined with light southerly winds, local build-up of pollutants and those transported from the U.S. will result in elevated smog levels across the lower extreme southwest parts of Ontario.

Smog is a hazy mix of pollutants made up of ground-level ozone, fine particulate matter and other pollutants. During the summer months, more than half of Ontario's smog-causing pollution originates in the United States. In cooler months, domestic sources can be significant contributors to the formation of fine particulate matter.

The website www.airqualityontario.com contains a list of "spare the air" actions (www.airqualityontario.com/science/spareair.cfm) to help combat smog and minimize its effect on sensitive populations. If you want to learn more about air quality, visit the Ministry of the Environment's website at www.ene.gov.on.ca.
