Andrew Szende, Electronic Child Health network
Leo Tasca, Ministry of Transportation
Lan Wang, Canadian Institute for Health Information
Susan Warner, London Health Sciences Centre
Jim Whaley, Grey Bruce Huron Perth District Health Council
Glynis Williams, Community Care Access Centre of Wellington-Dufferin
Bob Yoneda, Ontario Cancer Research Network
Greg Zinck, Canadian Institute for Health Information

Introduction

Information Management and Changing Health Care

The Ontario government is making major changes to the province's health care system to deliver quality care to patients when it is needed, and to help people stay healthy. In order to achieve these goals, it is working to re-establish a system in Ontario, over the next few years, that is more integrated, accountable and sustainable.

Information management is integral to a more accountable and sustainable system of care. A system that provides objective, timely and accurate information is the basis for sound decisions that are in the best interest of patients. With better information and through enhanced information management, Ontario will accurately track how the system is performing, so that people can assess its quality and progress. Evidence will then drive decisions for further improvements to health care.

A key area of focus for improving the management of information involves the development of tools to support both system-wide and local-level health care planning and decision-making within the context of health system transformation.

About the Data Guide

There are at least 80 information holdings currently in use in Ontario. These holdings contain structured health data that can be queried. Although they are typically used for planning, decision-making and performance measurement activities, until now there has been no guide describing these various holdings.

The *Ontario Health Planning Data Guide* is designed as a roadmap to these many authoritative sources of health care information. It is intended primarily for use by local and system-wide health care planners and analysts involved in research, policy development, and information management.

This guide includes profiles on 91 databases or information holdings, both internal and external to the Ministry of Health and Long-Term Care. An environmental scan led to the compilation of this set of holdings and they were validated by the organizations that own these holdings. Similar information about surveys has been captured in the guide's companion document, *The Ontario Health Planning Survey Guide*.

Content and Organization

The information in this guide is arranged according to the organization that owns the holding. Each entry includes:

- A general description of the holding and its data tables
- Instructions on how to access the data (including privacy constraints, licensing considerations and system requirements)
- Contact information

The guide includes a user-friendly cross-referencing chart organized by key health care topic and an index which allows the reader to locate individual information holdings by title (alphabetical), by data category, and by health topic. The Appendices also include a glossary of terms.

Comments

Write to the Health Results Team for Information Management at HRTIM@moh.gov.on.ca with your comments or if you have additional information to contribute to the guide.

What's New

Additions

Release 3.0 includes new profiles on the following information holdings:

- Aligned Tools and Knowledge Access (Health Results Team for Information Management – MOHLTC)
- Client Agency Program Enrolment (Health Services Division – MOHLTC)
- ConnexOntario – Mental Health Services Information Ontario (Community Health Division –MOHLTC)
- Consent Directive (Health Services Division – MOHLTC)
- Consent Permission (Health Services Division – MOHLTC)
- Vital Statistics (Knowledge Management and Reporting Branch – MOHLTC)

Updates

Release 3.0 includes updates from the following organizations for the specified profiles.

Canadian Institute for Health Information

- Canadian Joint Replacement Registry
- Discharge Abstract Database
- Hospital Morbidity Database
- Health Personnel Database
- National Ambulatory Care Reporting System
- National Health Expenditure Database
- National Prescription Drug Utilization Information System (NPDUIS)
- Therapeutic Abortions Database

Cancer Care Ontario

- All Data Holdings

Cardiac Care Network of Canada

- Cardiac Waiting List Registry

Community Health Division

- Drug and Alcohol Registry of Treatment
- Ontario Problem Gambling Helpline

Finance and Information Management Branch

- Ontario Mental Health Reporting System

Health Services Division (MOHLTC)

- Corporate Provider Database

Knowledge Management and Reporting Branch (MOHLTC)

- Health Information Library
- Provincial Health Planning Database

Ontario Physician Human Resources Data Center

- Active Physician Registry
- Ontario Postgraduate Medical Trainee Registry

Deletions

Ontario Joint Replacement Registry

- Effective March 31, 2006, the Ontario Joint Replacement Registry will no longer exist.
- Existing data will move to CIHI and ICES for research purposes.

How to Read this Data Guide

The following structure illustrates the layout of each profile and provides the definition for each field.

Information Holding – <i>This name is the actual name given by the owner organization</i>				
Data Categories <i>(See Glossary of Terms for definitions)</i>	<input type="checkbox"/> Clinical <input type="checkbox"/> Demographics <input type="checkbox"/> Financial <input type="checkbox"/> Health HR <input type="checkbox"/> Reference <input type="checkbox"/> Surveys <input type="checkbox"/> Other: _____			
Health Topics <i>(See Glossary of Terms for definitions)</i>	Services	<input type="checkbox"/> Acute Care <input type="checkbox"/> Community Care <input type="checkbox"/> Complex Continuing Care <input type="checkbox"/> Emergency Care <input type="checkbox"/> Long-Term Care <input type="checkbox"/> Mental Health/Addictions <input type="checkbox"/> Palliative Care <input type="checkbox"/> Primary Care <input type="checkbox"/> Rehabilitation <input type="checkbox"/> Other: _____		
	Wait Time Related	<input type="checkbox"/> Cancer Services <input type="checkbox"/> Cardiac Services <input type="checkbox"/> Cataract Surgery <input type="checkbox"/> Hip/Knee Joint Replacement <input type="checkbox"/> MRI/CT Scan <input type="checkbox"/> Other: _____		
	Age Groups	<input type="checkbox"/> Children (0-11) <input type="checkbox"/> Youth (12-17) <input type="checkbox"/> Adult (18-64) <input type="checkbox"/> Seniors (65+)		
	Other Topics	<input type="checkbox"/> Diabetes <input type="checkbox"/> Morbidity <input type="checkbox"/> Mortality <input type="checkbox"/> Osteoporosis <input type="checkbox"/> Paediatrics <input type="checkbox"/> Patient Safety <input type="checkbox"/> Prescription Drugs <input type="checkbox"/> Trauma/Injuries <input type="checkbox"/> Women's Health <input type="checkbox"/> Other: _____		
Web URL	Information:	<i>Internet address for information on this holding</i>	Login:	<i>Internet address to access the holding</i>

Overview

Description	<i>Summary description of the information holding</i>				
Info Holding Owner	<i>Name of the organization that owns this information holding</i>				
MOHLTC Owns:	<i>Specify if MOHLTC holds copy of this info holding. If so, is it restricted?</i> <input type="checkbox"/> Unrestricted Copy <input type="checkbox"/> Restricted Copy <input type="checkbox"/> Does not own a copy <input type="checkbox"/> Not Applicable			Copy Owner:	<i>Which MOHLTC Branch has the info holding copy?</i>
Target Audience	<i>The primary users of this information holding</i>				
Data Sources	<i>Specify if this holding contains data from a single source (primary) or is a collection of data/datasets from multiple holdings (secondary)</i> <input type="checkbox"/> Primary <input type="checkbox"/> Secondary	Sources:	<i>List names of the data sources</i>		
Population Groups Coverage	<i>Provide the extent to which the data has been captured for each of the population groups targeted by this information holding. (e.g. OJRR captures approximately xx% of all joint replacements)</i>				
Data Granularity	<i>What is the level of detail of the data?</i> <input type="checkbox"/> Personal <input type="checkbox"/> Anonymous <input type="checkbox"/> Pseudonymous <input type="checkbox"/> Aggregated		Aggregation Levels:	<i>If aggregated, describe the level(s) of aggregation</i>	

DATA TABLES

Table Name	Table Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
<p><i>Data Table Name.</i></p> <p><i>Note: These are the key data tables only, not field-value lookup tables (or other similar secondary tables)</i></p>	<p><i>Short description of the purpose, contents and use of the data in this table.</i></p>	<p><i>Unique fields that identify records in this table</i></p>	<p><i>Location(s) of data collection</i></p> <p><i>-Primary Care settings</i> <i>-Hospital</i> <i>-Long-term care facility</i> <i>-Home care</i> <i>-community)</i></p>	<p><i>Specifies whether the data is attached to the geography of the resident, provider, or both.</i></p>	<p><i>Level to which data can be obtained.</i></p> <p><i>-Postal Code</i> <i>-LHIN Code</i> <i>-Municipality</i> <i>-Region</i> <i>-Facility</i> <i>-Census</i> <i>-etc.</i></p>	<p><i>Earliest Data: Month/year of earliest available data.</i></p> <p><i>Latest Data: Month/year of latest available data.</i></p> <p><i>Update Freq.: How often is data updated?</i></p> <p><i>Mandatory? Is data collection mandatory, Yes / No?</i></p>
<p><i>Etc. (list tables alphabetically)</i></p>						<p><i>Earliest Data: _____</i></p> <p><i>Latest Data: _____</i></p> <p><i>Update Freq.: _____</i></p> <p><i>Mandatory? _____</i></p>

USAGE CONSTRAINTS

Privacy Constraints	<i>What are the privacy constraints (e.g. legislation) for this holding if any?</i>
Restricted Copy Rules	<i>What are the restraints/agreements on the use of the MOHLTC copy of the information holding?</i>
Derived Works Limitations	<i>What are the limitations to the distribution of analysis results based on the data in this information holding?</i>

DATA ACCESS

Network Accessibility	<p><i>Can the data be accessed over a network?</i></p> <p><input type="checkbox"/> None <input type="checkbox"/> Internet <input type="checkbox"/> Intranet <input type="checkbox"/> VPN <input type="checkbox"/> SSHA Network <input type="checkbox"/> Others: _____</p>
DSS Tools	<i>What Decision Support System (DSS) tool(s) are used to access and/or analyze this data?</i>

SYSTEM REQUIREMENTS

Licensing	<i>Licensing requirements to access the data? (I.e. Is a user or site license required? How do you become licensed?)</i>
Software Requirements	<i>What software is required to access the database?</i>
User Platform	<i>What platform is required to access the database using your PC?</i> <input type="checkbox"/> Web browser <input type="checkbox"/> Windows 2000/XP <input type="checkbox"/> Mac OS 9 / X <input type="checkbox"/> Unix <input type="checkbox"/> Linux
Network Requirements	<i>What network connections are required to access the database?</i>

CONTACTS

Support/Questions	Support Organization	Title	Name	Phone #	E-Mail
<i>Supporting role/title</i>	<i>Name of the supporting organization</i>	<i>Title of person in supporting role</i>	<i>Name of person in supporting role</i>	<i>Phone # of person in supporting role</i>	<i>Email address of person in supporting role</i>

ADDITIONAL NOTES

Provide any additional information that that could be useful to local planners regarding this holding, (e.g. known and potential data quality issues or limitations, original intent of information holding and how it evolved, general advice to planners on the use of this information holding.

Overview

Description	<p>The Ambulance Reporting Information System (ARIS) supports the dispatch of ambulances throughout the province. Ambulance service in Ontario is a seamless program that responds to requests for service and transports patients cross municipal boundaries without reference to residence or other demographic factors. Central Ambulance Communications Centres (CACCs) facilitate this seamless approach by coordinating, directing and deploying the movement of all ambulances and emergency response vehicles within large geographic areas. Computer-assisted wide area central dispatching helps the dispatcher in assigning the closest available and most appropriate ambulance to each emergency.</p> <p>Emerging technologies such as Automatic Vehicle Location (AVL) and Global Positioning Systems (GPS) also assists CACC communications staff by identifying the location of the closest vehicle for response and helping the dispatcher direct the ambulance to the call scene. A close working relationship between dispatch and ambulance services is required to move seriously ill and injured persons from one health care facility to another for treatment. The CACC computer aided dispatch system assists the dispatcher in managing this growing demand for medically essential ambulance transports between health care facilities while maintaining the necessary ambulance resources to respond to emergency calls.</p> <p>Interactive computer technology enables a dispatcher in the CACC to link together physicians, paramedics, other providers of emergency health services and public safety agencies. The computer aided dispatch system also allows the dispatcher to track the status of emergency departments and the availability of health care specialists and beds at most of the advanced care hospitals and health care facilities in the province. The system also allows for the linking of land and air ambulance service to ensure a smooth integration of these two vital programs.</p>

Overview

Description	<p>The Activity Level Reporting (ALR) database contains patient activity data from the Integrated Cancer Programs (ICPs) in Ontario. It is owned and maintained by Cancer Care Ontario (CCO). Data exists back to January 1, 1992.</p> <p>Historically, the ALR database was an analytical data repository for the Oncology Patient Information System (OPIS) application, which was a CCO-built clinical system used at 8 regional cancer centres. As of April 2005, the new Cancer Care Ontario Data Book defines what data all ICPs must submit to CCO, and the ALR database will be populated from that data book submission.</p> <p>ALR largely consists of outpatient oncology visit data and is similar to NACRS content with the following exceptions:</p> <ul style="list-style-type: none"> ALR contains detailed radiation therapy activity codes (NHPIP) ALR contains detailed drug delivery data for systemic therapy (chemotherapy) visits ALR contains detailed disease information about the patient, including cancer stage and morphology ALR determines unique cases at each ICP over the entire history of the dataset, where a case is an instance of a patient with a particular disease, usually a primary cancer. <p>There is no surgical oncology data in ALR, except for surgical clinic visits that occur in the cancer centres.</p>					
Info Holding Owner	Cancer Care Ontario

DATA TABLES

Entity Name	Entity Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
CASE	A case is a patient with an instance of a particular disease at an Integrated Cancer Program (ICP). Disease typically means a primary cancer. Includes patient birth date and sex, diagnosis information, and cancer stage.	Patient Chart (usually from OPIS), Disease Number, Centre (ICP)	Integrated Cancer Programs	Provider	Postal Code, Residence Code	Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes
CLINIC VISIT	All clinic visits at ICPs (e.g. - consults and follow-ups). Includes physician, program, and clinic location.	Chart, Disease Number, Centre, Visit Date	Integrated Cancer Programs	Provider		Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes
RADIATION THERAPY EVENT	An event where one or more radiation activities (NHPIP codes) occur for a patient. An event often equates to a therapeutic procedure as per MIS, but not always.	Chart, Disease Number, Centre, Treatment Date	Integrated Cancer Programs	Provider		Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes
RADIATION THERAPY ACTIVITY	An occurrence of a radiation activity (NHPIP code) for a patient. One or more radiation therapy activities compose a radiation therapy event.	Chart, Disease Number, Centre, Treatment Date, NHPIP Code	Integrated Cancer Programs	Provider		Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes
SYSTEMIC THERAPY EVENT	An event where one or more drugs are administered to a patient. An event often equates to a visit as per MIS, but not always. Includes regimen and patient height, weight.	Chart, Disease Number, Centre, Treatment Date	Integrated Cancer Programs	Provider		Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes
SYSTEMIC DRUG DELIVERY EVENT	A delivery of a single drug dose. One or more drug deliveries compose a systemic therapy event. Includes drug identification, dose, and route.	Chart, Disease Number, Centre, Treatment Date, Drug ID	Integrated Cancer Programs	Provider		Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes
PROCEDURE EVENT	A minor clinical procedure performed on a patient in a systemic suite at an ICP, such as skin excisions, needle biopsies, blood transfusions, venous access device service, or colposcopies. An event often equates to a procedure or visit as per MIS, but not always. Includes procedure identification (CCP code).	Chart, Disease Number, Centre, Treatment Date, CCP code	Integrated Cancer Programs	Provider		Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes
20+ OTHER TABLES	Includes other minor data tables, reference tables, and summary tables.		Integrated Cancer Programs	Provider		Earliest Data: 1992 Latest Data: Current Update Freq.: Monthly Mandatory? Yes

Overview	
Description	<p>CCO and the MOHLTC launched the Ontario Cervical Screening Program in 2000. The program's purpose is to increase recruitment of women for regular Pap tests, facilitate appropriate follow-up, monitor the services provided and evaluate outcomes. The only functional component of the information system is the cytology registry, CytoBase, a commercial database used by the Cervical Screening Program, containing results on Pap tests performed by four community labs in Ontario. Reporting is voluntary.</p> <p>CytoBase is a commercial database owned by the not for profit corporation INSCYTE. CytoBase also provides support to laboratories for sending reminders to overdue clients. The registry does not contain information on patient scheduling or outcomes of definitive tests. The data has not been linked to any other data files by CCO.</p>
Info Holding Owner	INSCYTE Corporation, contractual access granted to Cancer Care Ontario (CCO).
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input type="checkbox"/> Restricted Copy <input checked="" type="checkbox"/> Does not own a copy <input type="checkbox"/> Not Applicable Copy Owner: _____
Target Audience	CCO (Division of Preventive Oncology, Screening Unit Staff), Participating private laboratories
Data Sources	<input checked="" type="checkbox"/> Primary <input type="checkbox"/> Secondary Sources: _____
Population Groups	It is estimated that over 80 percent of all Pap smears read in Ontario are in the database. The database does not include cervical cytology from hospital labs and small community labs. No pathology is submitted to the database.
Data Granularity	<input type="checkbox"/> Personal <input type="checkbox"/> Anonymous <input type="checkbox"/> Pseudonymous <input type="checkbox"/> Aggregated Aggregation Levels: _____

DATA TABLES

Entity Name	Entity Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
PATIENT	Contains identifying information on the screened population. Fields include first and last name, address, OHIP number, sex, birthdate, etc.	Patient ID (System-generated key)	Community Laboratories	Provider	Postal Code	Earliest Data: 1997 Latest Data: Nov/04 Update Freq.: Semi-annually Mandatory? Voluntary
REPORT HEADER	Contains identifying information for each laboratory report, including screening date, pathologist information, and whether the report is provisional, final, or amended.	Patient ID, Institution ID, Provider ID, Report ID (System-generated key)	Community Laboratories	Provider		Earliest Data: 1997 Latest Data: Nov/04 Update Freq.: Semi-annually Mandatory? Voluntary
REPORT DETAIL	Contains the content of each screening report, with one report element per record. Each element is expressed as a token name and value and can include text or coded information.	Report ID, Patient ID	Community Laboratories	Provider		Earliest Data: 1997 Latest Data: Nov/04 Update Freq.: Semi-annually Mandatory? Voluntary
PLUS 4 OTHER REFERENCE TABLES	Contain information on diagnosis codes, providers, and facilities.		Community Laboratories	Provider		Earliest Data: 1997 Latest Data: Nov/04 Update Freq.: Semi-annually Mandatory? Voluntary

USAGE CONSTRAINTS

Overview

Description	The New Drug Funding Program (NDFP) is a province-wide formulary administered by CCO to reimburse hospitals for new and expensive IV cancer drugs. While its purpose is primarily financial, there are clinical criteria that must be met in order to qualify for reimbursement which are included in the database. Participation in the program is voluntary, but data submission is mandatory in order for hospitals to receive reimbursement.

Overview

Description	<p>Cancer Care Ontario collects wait times data from Integrated Cancer Programs in Ontario for radiation therapy and systemic treatment. Dates currently collected are referral, first consult, decision to treat, and first treatment. These dates are collected at the first consult and first treatment event for each patient.</p> <p>Limited wait time data are reported publicly on Cancer Care Ontario's website.</p> <p>Limited surgical oncology wait time data is being introduced in 2005 as part of the surgical oncology funding agreements that CCO has with a number of Ontario hospitals.</p> <p>The radiation and systemic wait times data is currently stored in separate tables in the Activity Level Reporting database. It is likely that this wait time's data will be consolidated with the surgical wait time's data sometime in 2005/06.</p> <p>The Decision-to-treat date was added for radiation wait times in 2004/05 and is being added for systemic wait times in 2005/06.</p>

Overview	
Description	The Ontario Breast Screening Program database supports the day to day operations of the OBSP: client recruitment, screening, reporting to client and physician, tracking abnormal cases, and recalling women for their next screening. It is also used for quality assurance, statistical reporting for CCO management and for the MOHLTC, and providing data to the National Breast Screening Program and various epidemiological studies.

Overview			
Description	<p>The Ontario Cancer Registry (OCR) is a computerized database of information on all Ontario residents who have been newly diagnosed with cancer ("incidence") or who have died of cancer ("mortality"). All new cases of cancer are registered, except non-melanoma skin cancer. Close to 400,000 records are submitted to the OCR each year. Cancer is not a reportable disease in Ontario; therefore, submission of data to OCR is voluntary.</p> <p>OCR is used for the following purposes: Surveillance (examining trends in cancer incidence and mortality rates and analyzing geographic variation in cancer rates across the province), Dissemination of data to the Canadian Cancer Registry at Statistics Canada (annually), the North American Association of Central Cancer Registries (annually) & the International Agency for Research on Cancer; Population-based epidemiological studies; Research studies; Linking data to other databases such as the Integrated Client Management System at the Ontario Breast Screening Program (OBSP); and reporting cancer statistics to the public on an annual basis.</p>

DATA TABLES

Table Name	Table Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
PATIENT HEADER	Contains one record for every resolved patient. This table is regenerated after each linkage process between the various source datasets. It summarizes the source record information for the patient.	Group Number (System-generated key)	Various	Provider	Postal Code, Residence Code	Earliest Data: 1964 Latest Data: 2004/05 Update Freq.: Varies by source. Mandatory?
CASE HEADER	Contains one record for every resolved primary cancer, as determined by the Case Resolution process. This process examines the diagnostic data elements on the source records for each patient and creates "incident" or "non-incident" case records to summarize each distinct primary cancer as identified through a complex set of rules based upon medical logic. Each patient will have 0-5 case records.	Group Number, Resolved Case Number, Resolved ICD Code	Various	Provider	Postal Code, Residence Code	Earliest Data: 1964 Latest Data: 2004/05 Update Freq.: Varies by source. Mandatory?
5 PMH TABLES	Data from the Princess Margaret Hospital Cancer Registry.					
5 RCC TABLES	Data from the Regional Cancer Centres in Ontario.					
5 PATHOLOGY TABLES	Cancer data from paper and electronic pathology reports from Ontario hospital laboratories.					
6 HOSPITAL DISCHARGE TABLES	Cancer data from CIHI Discharge Abstract Database and the Same Day Surgery/ NACRS datasets for Ontario hospitals.					
10+ DIAGNOSIS REFERENCE TABLES	Reference and conversion tables for ICD9 and morphology classifications.					
25+ OTHER TABLES	Various other reference tables.					

USAGE CONSTRAINTS

Privacy Constraints	Cancer Care Ontario's privacy policy can be found at http://www.cancercare.on.ca/default_privacy.htm .
Restricted Copy Rules	Certain source components of the Ontario Cancer Registry have additional access and/or usage constraints as defined by the information providers, such as CIHI's DAD & NACRS datasets, the MOHLTC's Registered Person's Database, and the Registrar General's Mortality Data.

ADDITIONAL NOTES

The OCR regularly contributes incidence data to the Canadian Cancer Registry based at Statistics Canada, the North American Association of Central Cancer Registries and to the International Agency for Research on Cancer. The Public Health Branch of the Ministry of Health also receives data from the OCR for its community health information system.

Delays in receiving this data from external sources can occur.

Overview	
Description	<p>In 2002, Cancer Care Ontario developed and piloted a custom Pathology Information Management System (PIMS) to allow laboratories the ability to electronically submit information to the Ontario Cancer Registry. PIMS is operational at many hospital and laboratory sites. It provides timely access to pathology information. The project allows for a common reporting system for cancer patients. It has been developed on an ORACLE database using a UNIX platform. The project will result in improvements in compliance, timeliness and quality of submission of tumor pathology information to the Ontario Cancer Registry (OCR). It will also provide efficient access to relevant information by researchers and clinicians.</p> <p>Hospitals are mandated to report cancer pathology data to CCO, but not all are using PIMS yet. Some submit pathology reports in paper format.</p>

ADDITIONAL NOTES

PIMS accepts an electronic data feed from a pathology system, automatically codes the pathology report, and then transmits the report and the coded pathology data to CCO for inclusion in the Ontario Cancer Registry.

PIMS is already operational at Lakeridge Health Corporation, Cambridge Memorial Hospital, Gamma-Dynacare Laboratories, University Health Network, Mount Sinai Hospital, and Rouge Valley Hospital Centenary Site and Ajax Pickering Site. Cancer Care Ontario is now working to implement PIMS at Sunnybrook & Women's College Health Sciences Centre, Markham Stouffville Hospital, Royal Victoria Hospital in Barrie, Toronto East General Hospital and St. Michael's Hospital. More participants across the province are expected to join this priority initiative over the coming months.

Overview	
Description	<p>The CCN has two primary functions: coordinating the provision of adult cardiac services with the aid of a computerized registry and advising the Ministry on issues related to cardiac services. The database, in 17 member hospitals in Ontario, is used by the regional cardiac care coordinators to facilitate and monitor access to services by patients and their physicians.</p> <p>CCN's provincial patient registry and management information system provides a concrete, objective profile of Ontarians waiting for cardiac surgery, catheterization, angioplasty and stent procedures, and guides referrals for these procedures. Data are gathered from referring physicians by regional cardiac care coordinators. CCN continuously monitors and evaluates waiting times and mortality rates for advanced cardiac services and provides feedback when access may be jeopardized. The success of the surgical registry prompted the Ministry to support the expansion of the database to include catheterizations, angioplasties and stent procedures in 2000. Wait Time Information is provided to the MOHLTC on a regular basis both for internal policy and planning needs and for public reporting in support of the Provincial Wait Time Information Strategy for Ontario.</p> <p>The CCN database has improved decision-making by: using standardized cardiac definitions such as the urgency rating score, highlighting current and potential cardiac-service issues and fostering open discussion within the cardiac care community to make improvement in system performance. Data is publicly released on the CCN Website, the MOHLTC Website and in an annual Cardiac Report Card, jointly produced by CCN and ICES and to the Provincial Wait Time Office. CCN member hospitals use Monthly Statistical Reports produced by the CCN to guide access decisions.</p> <p>CCN has data quality processes in place to measure data completeness, accuracy and relevancy. The data is verified by each hospital on a monthly basis and chart audits are performed periodically. Data definitions are reviewed by CCN's stakeholders to ensure relevance.</p>

Patient Brochure	Privacy flag to indicate patient received patient information brochure (includes information on CCN's information and privacy practices).	ID_Number Institution_Code	Hospitals	Resident and Provider	N/A	Earliest Data: 2004 Latest Data: Current Update Freq.: Real time/Near real time Mandatory? No, but required
Encounters	Information relating to the procedure patient is on the wait list for including clinical, morbidity, patient history, URS, procedure off-list (taken off the wait list due to procedure complete, mortality, etc), patient location at time of procedure details. Multiple encounters can exist for one patient.	ID_Number Institution_Code Encounter	Hospitals	Resident and Provider	Postal Code	Earliest Data: 1991 Surgery, 2000 Catheterization, PCI and Ad Hoc PCI Latest Data: Current Update Freq.: Real time/Near real time Mandatory? Yes
Drug Eluting Stents	Stent utilization details including lesion location, lesion type, survival dependent vessel, stent type, DES type, stent size, stent length, due to restenosis specific to the encounter	ID_Number Institution_Code Encounter Stent_ID	Hospitals	Resident and Provider	N/A	Earliest Data: 2004 Latest Data: Current Update Freq.: Real time/Near real time Mandatory? Yes if PCI or Ad Hoc PCI performed
Deferrals	Deferrals from the wait list including reason specific to the encounter and date of reinstatement (reinstated on the wait list).	ID_number Institution_code Encounter Deferral_date	Hospitals	Resident and Provider	N/A	Earliest Data: 1991 Latest Data: Current Update Freq.: Real time/Near real time Mandatory? Yes

DATA TABLES

Table Name	Table Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
Cancels	Cancellations from the wait list including cancel code, encounter, cancel date specific to the encounter.	ID_number Institution_code Encounter Cancel_date	Hospitals	Resident and Provider	N/A	Earliest Data: 1991 Latest Data: Current Update Freq.: Real time/Near real time Mandatory? Yes
Notes	Free form patient notes specific to the encounter including encounter, date.	ID_number Institution_code Encounter	Hospitals	Resident and Provider	N/A	Earliest Data: 1991 Latest Data: Current Update Freq.: Real time/Near real time Mandatory? Yes
Events	Other clinical events relating the to the procedure specific to the encounter.	ID_number Institution_code Encounter	Hospitals	Resident and Provider	N/A	Earliest Data: 1991 Latest Data: Current Update Freq.: Real time/Near real time Mandatory? Yes
Contacts	Patient contact log relating to the procedure specific to the encounter.	ID_number Institution_code Encounter Contact number	Hospitals	Resident and Provider	NA	Earliest Data: Latest Data: Update Freq.: Mandatory?
Hospital Specific	Hospitals can specify 20 numeric, 10 date and 25 text fields unique to their data needs specific to the encounter.	ID_number Institution_code Encounter	Hospitals	Resident and Provider	N/A	Earliest Data: 1991 Latest Data: Current Update Freq.: Real time/Near real time Mandatory? Yes
Data External to Database						
MOHLTC Funded Volumes	Hospital monthly MOHLTC funded volumes (hospital targets) for Surgery, Catheterization, PCI (non ad hoc and ad hoc).	N/A	MOHLTC	N/A	N/A	Earliest Data: 1999/2000 Latest Data: Current Update Freq.: Yearly Mandatory? Yes
ICD	Number of procedures completed by month by hospital (aggregate).	N/A	Hospitals	Provider	N/A	Earliest Data: 2004 Latest Data: Current Update Freq.: Monthly Mandatory? No

DATA TABLES

Table Name	Table Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
EPS/Ablation	Number of procedures completed by month by hospital (Aggregate).	N/A	Hospitals	Provider	N/A	Earliest Data: 2000 Latest Data: Current Update Freq.: Monthly Mandatory: No

USAGE CONSTRAINTS

Privacy Constraints	At all stages of the patient-care process, the security and confidentiality of all information in the registry are strictly protected. CCN's privacy program conforms to PHIPA.
Restricted Copy Rules	Seventeen separate hospital databases and one central repository. CWLR cannot be copied in whole or in part except as derived under Derived Work Limitations.
Derived Works Limitations	Reporting at an aggregate level to MOHLTC, hospitals, system planners and public must contain aggregated values only. (Small cell counts of <=5 are suppressed). Hospitals are provided with non-aggregated data at their request and for data quality purposes. Fiscal data extracts are provided to ICES (complete dataset excluding patient name, street address and phone numbers).

DATA ACCESS

Network Accessibility	<input type="checkbox"/> None <input type="checkbox"/> Internet <input type="checkbox"/> Intranet <input type="checkbox"/> VPN <input checked="" type="checkbox"/> SSHA Network - using SSH 128 bit encryption (point to point with hospitals) (CCN office for system management purposes only and nightly data downloads from hospitals to CCN repository. Presently all sites are being migrated to the SSHA MPN (Managed Private Network)). <input checked="" type="checkbox"/> Others: LAN - Client Server at each hospital site (their data only).
DSS Tools	Crystal Reports 7.0 and SPSS 13.0

SYSTEM REQUIREMENTS

Licensing	All cardiac hospitals sign a Participation Agreement with clauses relating to system use and accountability. No user licensing is required since the application is developed and maintained in-house.
Software Requirements	Oracle 7.3.4, Oracle Forms 4.5, client server workstations using Win98 to XP, Crystal 7.0.
User Platform	<input type="checkbox"/> Web browser <input checked="" type="checkbox"/> Windows 2000/XP <input type="checkbox"/> Mac OS 9 / X <input checked="" type="checkbox"/> Unix/SCO 5.05 <input type="checkbox"/> Linux
Network Requirements

Technical support	Cardiac Care Network of Ontario	PC/Network Specialist	Darko Mazalica	(416) 512-7472 x230	dmazalica@ccn.on.ca

ADDITIONAL NOTES

1. CCN's website includes current hospital-specific statistics on access to care, referral information, annual reports, consensus-panel documents, operating plans and other releases. It's annual reports includes hospital and provincial level information on indicators such as number of cases completed for cardiac surgery, caths and angioplasties, waiting lists and times, patients who receive care within their recommended maximum wait time, number of deaths waiting for surgery and the number of cancellations.
2. CCN is working closely with the Provincial Wait Time Office in the design and development of the Wait Time Information System (WTIS) along with the other 4 key clinical areas, cancer, cataract, joint replacement and CT/MRI.
3. CCN has undergone a data definition review and changes have been made to the data elements (deletions, additions, re-defined). Some of the changes have been implemented in the current CCN application; however, most significant changes will be made within the provincial WTIS.

Overview

Description	The College of Nurses of Ontario (CNO) is the governing body of the registered nurses (RN) and registered practical nurses (RPN) in Ontario. CNO regulates nursing to protect the public interest and sets requirements to enter the profession, establishes and enforces standards of nursing practice, and assures the quality of practice of the profession and the continuing competence of nurses. CNO maintains information with respect to all nurses registered in Ontario, and provides all publicly available information regarding nurses; name, registration number, business address, business phone number, category, class, education and registration information, terms, limits or conditions that are on the nurse's certificate and information about discipline hearings.

Overview	
Description	The CHC MIS Program Evaluation System supports planning, management and accountability functions and is business critical. Information collected includes individual, group and community-based services, as well as financial reporting data. Current enhancements under development will add functionality relating to survey data and performance indicators. A systems rollout in 2003 improved front-end input validation rules. This application has a web enabled data transfer and reporting interface.

Overview	
Description	The Client Profile Database (CPRO) contains pseudonymous Long-Term Care Home (LTCH) application information that is captured at the client level. The data is broken into three main categories of information sets. 1. Client, 2. Choices, 3. Milestone (date) events through the LTCH Placement process. This database was created because of limitations with the dataset in the Occupancy Monitoring Database (OCCM), which could not provide very detailed reporting on demand. CPRO receives client level data once per month from every Community Care Access Centre (CCAC). This data is used to support bed utilization monitoring, performance management activities and LTC accountability planning.

	Long-Term Care Planning and Renewal Branch (MOHLTC)	Director	David Clarke	(416) 314-0402	David.Clarke@moh.gov.on.ca

ADDITIONAL NOTES

This project was undertaken because of a lack of more granular data in the OCCM. It uses data feeds developed by the Long-Term Care Redevelopment Project (LTCRP) to obtain raw extracts from each CCAC's Client Placement System. The data extracts are loaded into the Client Profile Database. Data is available from April 2003 onward and is usually 1 month in arrears.

Overview	
Description	<p>Drug and Alcohol Registry of Treatment (DART) is an information and referral database, used by operators of a toll-free, province-wide, treatment information and referral service, available to professional and public callers. It is designed to link callers with suitable treatment options tailored to their individual needs. DART is part of MOHLTC's plan to increase the efficiency of addiction treatment in Ontario. DART's role is to link professional callers with a range of suitable treatment options tailored to their individual clients. And also, to link members of the general public with local assessment and referral, withdrawal management, and other treatment resources for themselves or someone they know.</p> <p>DART provides data for provincial planning initiatives. Data are only available upon formal request submitted to DART and are not accessed from the DART site by the requestor. MOHLTC owns the data collected. DART produces the Directory of Drug and Alcohol Treatment Services in Ontario, which outlines all services available in a given geographic region according to the type of services provided. The directory is available from DART upon request. DART also provides a virtual directory of drug and alcohol treatment services on its website.</p>
Info Holding Owner	Mental Health and Addictions Branch (MOHLTC)
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input type="checkbox"/> Restricted Copy <input type="checkbox"/> Does not own a copy <input checked="" type="checkbox"/> Not Applicable Copy Owner: MOHLTC owns the info holding but does not hold a copy. All data is held by DART.

Overview

Description	<p>Mental Health Service Information Ontario (MHSIO) is a toll-free information and referral service accessible province-wide, 24 hours per day, 7 days per week. It is available to professional and public callers. MHSIO is part of MOHLTC's plan to increase the efficiency of the mental health system in Ontario. MHSIO's role is to link professional callers with a range of suitable service options tailored to their individual clients. And also, to link members of the general public with mental health service across the province for themselves or someone they know.</p> <p>MHSIO provides data for provincial planning initiatives. Data are only available upon formal request submitted to MHSIO and are not accessed from the MHSIO site by the requestor. MOHLTC owns the data collected. MHSIO provides an online and searchable, and a printed version of <i>Ontario Directory of Mental Health Services</i> which outlines all services available in a given geographic region according to the type of services provided. The directory is available from MHSIO upon request. MHSIO also provides a virtual directory of mental health services on its web-site.</p>

Overview	
Description	<p>Drug and Alcohol Treatment Information System (DATIS) is a province-wide information system that tracks client demographic and service utilization data for problem gambling and addiction treatment agencies. The Centre for Addiction and Mental Health (CAMH) is contracted by MOHLTC to manage the DATIS system.</p> <p>Data provision is mandated by MOHLTC via a service agreement with the agencies that receive MOHLTC alcohol and drug or problem gambling treatment funding. Most participating agencies use Catalyst as their client information system to manage and monitor basic information about which they are serving, as well as the service delivery process within the agency. Demographic and problem characteristic data is combined with service utilization data to provide the basis for future outcome evaluations of problem gambling and addiction treatment.</p>
Info Holding Owner	Mental Health and Addictions Branch (MOHLTC)

USAGE CONSTRAINTS

Privacy Constraints	The system contains client level data, including personal health information. Each participating agency accesses only the records of that agency's clients.
Restricted Copy Rules	Database access restricted to selected DATIS staff. MOHLTC analysts can only access aggregate data with cell sizes greater than 5.
Derived Works Limitations	Analytical reports are prepared for MOHLTC and distribution decided by MOHLTC. Any publicly available reports can be downloaded from http://www.datis.ca

CONTACTS

Support/Questions	Support Organization	Title	Name	Phone #	E-Mail
Director	DATIS, Centre for Addiction and Mental Health	Director	Larry Corea	(416) 535-8501 x 6829	Larry_Corea@camh.net
Database Administrator	DATIS, Centre for Addiction and Mental Health	Database Administrator	Vivian Shehadeh	(416) 535-8501 x 6966	Vivian_Shehadeh@camh.net

ADDITIONAL NOTES

Agencies are mandated to input information in accordance with the agency/MOHLTC funding agreement. Access is restricted to five people at the Centre for Addiction and Mental Health.

Participating agencies can only access information on their own clients. The agencies are not required to provide a unique patient identifier (e.g. name, address, health insurance number).

The service contract with the Ministry establishes the priority for DATIS to process and respond to data requests. The priority is MOHLTC, LHINs, participating agencies, Researchers, and Public requests.

Rules for access to micro-data by researchers still to be developed.

Overview	
Description	The Homes for Special Care (HSC) application supports the tasks required to issue annual licenses to operators of Homes for Special Care. Each home licensed by the Ministry of Health and Long-Term Care is inspected annually by the local Public Health Office, the Fire Marshall's Office, and the Homes for Special Care Community Support Worker. The HSC program was established in 1964 and provides long term accommodation and assistance with the activities of daily living for individuals with serious mental illness discharged from the provincial psychiatric hospitals and public hospitals that received the divested provincial psychiatric hospitals

Overview	
Description	<p>The Interim Assessment Software automates parts of the assessment process for individuals who have indicated an interest in seeking Long-Term Care Facility (LTCF) placement and for those clients receiving community services of the CCAC's and who are identified using MIS recipient code categories for Long-stay, Maintenance and possibly Rehabilitation (the consistency of use of the software for these last 3 groupings may vary from CCAC to CCAC). These assessments include the following:</p> <ul style="list-style-type: none"> • Conducting assessments in the community, with the RAI-HC instrument • Calculating RAI-HC (RAI-Home Care) outputs (CAPs and MAPLe Reports) • Storing and printing client records at the Community Care Access Centres (CCAC) • Creating scrubbed assessment files • Transferring the assessment and scrubbed assessment file to the CCAC local server for storage and printing <p>As the new RAI software is released, the data repository at the Wellington-Dufferin CCAC becomes less complete. It is undecided who will be the owner of the new data or how it is accessed.</p>

Overview	
Description	<p>The Levels of Care (LOC) Classification System holds information from the annual assessment of Ontario Long-Term Care Homes (LTCH) residents' level of care requirements, in which residents are classified according to their nursing and personal care requirements and general profile, health status, activities of daily living, behaviours of daily living, and continuing care level by facility. Approximately 150 Registered Nurses (RNs) and Registered Practical Nurses (RPNs) are hired and trained as classifiers to conduct the reviews each year between September and November. Information is collected via a standard template which is completed by the nurse performing the assessment on site. Inter-rater reliability testing is conducted every two weeks during the review period to ensure a reliability of 90%. An audit of the classification is conducted each February. Information is stored in a MS-Access database.</p> <p>The LOC Classification System is an operational support tool. This information is used to calculate the funding level for each facility (e.g. Case Mix Measure (CMM) and Case Mix Index (CMI)), for the nursing and personal care envelope.</p>

Overview

Description	This information system was developed to assist in the management of information relating to the status of the 20,000 new Long-Term Care Home (LTCH) bed awards and the redevelopment, retrofit or upgrade of up to 16,000 "D" beds. The system also tracks Awarded-Unopened beds and Direct Minister Awards. The information in the MIS includes: facility/owner contact information, project milestones for each phase of development and open note fields for project specific information.

Support/Questions	Support Organization	Name	Phone #	E-Mail
* No dedicated DBA to the LTPRB MIS System.	Long-Term Care Planning and Renewal Brach	David Clarke, Director, Long-Term Care Planning and Renewal Branch	(416) 314-0402	David.Clarke@moh.gov.on.ca

ADDITIONAL NOTES

The system was developed by the Long-Term Care Redevelopment Project (LTCRP) and expanded internally strictly to meet the needs of the LTCPRB (formerly the LTCRP). It contains some standard reports that were used by the LTCRP management. A tool that is associated with this system is Form Viewer.

The MIS system is for internal use only. The OCCM database draws information on facility opening dates.

Overview			
Description	<p>The Midwifery Management Information System is currently UNDER DEVELOPMENT. It will assist midwives with reporting requirements and improve midwifery data for research and accountability.</p> <p>The system will include three components: an electronic data collection operational and system for midwives, a provincial database that will warehouse and enable monitoring and evaluation of midwifery services on an ongoing basis, and an external reporting process for service providers, stakeholder organizations and the public to access information reports on services provided. This MIS will integrate data from a number of existing databases into one platform.</p>

Overview			
Description	The Occupancy Monitoring Database (OCCM) was developed by the Long-Term Care Redevelopment Project (LTCRP) and provides a comprehensive source of data for the Long Term Care sector. The OCCM contains supply information, vacancies, and population data. The OCCM is used for tracking the supply of beds and vacancies in long-term care homes for monthly reporting. The purpose of this database is to provide current information on LTC Bed Supply and Demand for management staff within the MOHLTC.

ADDITIONAL NOTES

Data Elements include: Bed Numbers, Bed Type, Bed Class, Bed Group Comment field content, Open Date (of beds), Close Date (of beds), Address Information (e.g. Street Address, City/Town, Postal Code, and Facility Comment field). Initially, supply Information was gathered from a variety of MOH systems, including FMIS, Facility Funding, and LTCRP MIS. Changes and/or additional supply information is supplied by the CCAC's or individual LTCF. Demand Data was originally sourced from existing PCS Reports which were 'scrubbed' prior to loading and reporting. Vacancy data is received directly from CCAC's in a raw format. Supply Data was originally sourced from a number of different systems but has been heavily modified and 'scrubbed' so it can be considered the definitive source for structurally defined LTCH Bed Supply in the Province. Regular updates are received from a number of sources. Statistics Canada data is 1996+ (e.g. mini census update applied to the data) and was received from the Ministry of Finance (MOF). Community Services Division information was 'scrubbed' due to inconsistencies with data provided by MOF and may include small differences from source.

Overview	
Description	The Ontario Home Care Administration System (OHCAS) was developed in 1978 to provide consistent and timely information on clients referred to the Home Care Program and on services coordinated by the Program. OHCAS records demographic, diagnostic and treatment information about clients of the Ontario Home Care Program. This system also records information on all services provided and provider agencies. Information is transferred to OHCAS on a weekly basis by each Community Care Access Centre (CCAC), through electronic file transfer from their local systems.
Info Holding Owner	Home Care and Community Support Branch (MOHLTC)
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input type="checkbox"/> Restricted Copy <input type="checkbox"/> Does not own a copy <input checked="" type="checkbox"/> Not Applicable Copy Owner: HSC Regional Operations

Support/Questions	Support Organization	Title	Name	Phone #	E-Mail
Application Programmer	HSC Regional Operations Support	Consultant	Cheryl Bostock	(416) 327-7704	Cheryl.Bostock@moh.gov.on.ca

ADDITIONAL NOTES**Information held by the system:**

- **Client Information:** Date of Birth, Health Number, Sex, County of Residence, Municipality of Residence, & District Health Council
- **Application and Assessment:** Application Date, Assessment Date, Attending Physician Number, Referring Physician Number, Diagnosis, Home Care Condition, Patient Subsidy, Prior Site Master Number, Home Care Program Number, Home Care Program Type, Referral Source, Surgical Procedure
- **Admission:** Admission Status, Admission Date, Reason for Not Being Admitted, Planned Discharge Date, Support Services, Goal of Home Care Treatment, Type of Treatment Site
- **Discharge:** Discharge Date, Discharge Disposition, Discharge Status
- **Services and Activities:** Service Dates, Type of Service, Type of Activity

Master Files: OHCAS contains two master files, the Registration Master File (RMF) which records client information at the time of application, admission, and discharge from home care and the Service Advice Master File which records services received by home care clients. The RMF generates a record (case) for each application to a Community Care Access Centres (CCAC) which includes the application date, the home care program, and the client's health care number. If the applicant is admitted to the program, values for a number of other attributes (variables), such as admission date, date of birth, gender, and diagnoses, are entered into the record. This record remains active until the client is discharged from the CCAC. If a previously discharged client reapplies to a CCAC, a new RMF record is generated. Thus, the RMF consists

of (1) cases that applied for but were not admitted to a CCAC, (2) cases that applied, were admitted, and were discharged from a CCAC, and (3) cases who applied, were admitted but have not yet been discharged from a CCAC.

Associated with RMF records are records from the Service Advice File (SAF) which document the home care services (e.g. nursing, physiotherapy) that a client receives. A SAF record is generated each time a service is provided and documents the date of service, the type of service provided, and the activities carried out under that service. Thus, if one registered case receives many different services or the same service on many occasions, the RMF record will have many SAF records associated with it. For clients who apply but are not admitted to a CCAC, there will be only one SAF record associated with the RMF. The PHPDB has files from April 1991 to 1997. They are considering updating their database with the current data set.

Availability of the Data: To help standardize and simplify analysis of home care data, CEHIP formed a data working group of District Health Council representatives to examine the OHCAS data. This working group has developed a standard working data file and a data dictionary (OHCAS Summary Data File) from the RMF and SAF.

Data Quality Notes: Services provided by CCAC's and the definitions they use can vary across the province. Therefore, it is important for users of OHCAS data to consult with, and become familiar with the practices of, the CCAC's they are studying. Findings from analyses of OHCAS data should be interpreted with caution. Users have reported a number of issues with the data. These include the following:

- SAF records exist for which there is no matching RMF record, and vice versa. This is most likely due to data entry errors when entering the SAF or RMF.
- Client diagnosis may not be valid in some cases, especially when the client's length of stay with home care (discharge date minus admission date) is very long (e.g. 830 days). In such instances, the client's admission to home care may have been associated with their diagnosis but the client now may be receiving services for another condition.

Other Limitations: The last complete data set is from 2002/2003. Historically there has been a 15-20% data rejection rate. However, since 1997/1998, one CCAC has discontinued annual correction of the rejected data. This has resulted in an incomplete data set for subsequent information.

Overview	
Description	The Trend Data Management System (TDM) stores aggregated data from other LTC home databases containing information about the supply and demand for long-term care homes. It provides a common source for LTC home Management Reporting. The primary uses of the Trend Data Management System are: bed utilization monitoring, performance management and accountability reporting. The Utilization Atlas and the LTCAP are currently the only applications to use this as a primary source of data.

Overview	
Description	<p>HiNet is a secure system in which a child's medical records are available electronically to health care providers when and where they are required. This information includes laboratory results, doctor's notes, x rays, medication reports, and personal information such as age, address and phone number. HiNet uses the latest security technology and all information remains private within eCHN.</p> <p>HiNet is available only to pre-authorized healthcare providers. Patient participation is voluntary and written parental consent may be required.</p> <p>Although the decision not to participate will not affect the care delivered to any child, there are substantial benefits to having a child's health data on the network. These include faster access to patient records, more complete information available to health care providers and a reduction in duplicate x-rays and diagnostic tests.</p> <p>Clinical records from patients who have given consent have been stored on HiNet since July 1, 1999. Health care professionals affiliated with our member institutions have had operational access to patient information on HiNet data since October 31, 2000. Current users of HiNet are listed as Members on the eCHN Home Page. HiNet continues to grow and Hospitals or Paediatricians interested in joining the Health Information Network should contact us by telephone or e-mail as listed below.</p>

Overview	
Description	<p>The Common Data Set-Mental Health (CDS-MH) provides the foundation for administrative and clinical data collection standard for community mental health reporting to the Ministry of Health and Long Term Care (MOHLTC). It focuses on basic demographic data with some outcome related elements. It links to financial and statistical reporting standards (Management Information System - MIS Guidelines) through the use of functions consistent in their definition across both reporting standards. MOHLTC's collection of CDS-MH will be limited to annual submissions of data at an aggregate level only.</p> <p>The CDS-MH is intended to provide a foundation for data collection in the mental health sector. The CDS-MH will include elements for some outcome measures. The CDS-MH will focus on elements required to meet MOHLTC accountability needs. These elements may not completely address assessment and care planning data requirements of the service provider. The data applies to the community and hospital (general, specialty and provincial psychiatric hospital) sites sponsored by community mental health programs.</p>

Overview	
Description	<p>The Community Mental Health Programs Budgets and Inventory (CMHPBI) system manages the Operating Plan processes for the transfer payments for community mental health programs.</p> <p>The CMHPBI supports the Operating Plan's objectives of quantifying its fiscal, human resources, program and services initiatives for local, district and regional health needs. This includes budgetary constraints, mental health reform and restructuring initiatives, together with district and regional program system design, delivery initiatives and program strategic directions. It also audits and monitors related program correspondence.</p>

Overview	
Description	<p>The Community Services System (CSS) holds financial and statistical data (budget/actual) for long-term care (LTC) community programs. The CSS generates reports from individual agency data.</p> <p>At the start of each fiscal year, budget information is provided electronically by agencies to the Ministry of Health and Long-Term Care (MOHLTC). Actual financial data reports (expenditure and units of service) are input manually and are provided to MOHLTC in hard copy in the 2nd and 4th quarters of the year. CSS permits cross reference analysis of any data fields for further examination. CSS had three components: home care, community support services and children's treatment centres. Starting in 2003/04, only community support services continued to send in data to CSS.</p>

Overview	
Description	<p>The Community Treatment Orders Information Records (CTOIR) database is an inventory of the Community Treatment Orders (CTOs) issued in Ontario. The database was implemented as a requirement of Brian's Law. Brian's Law (<i>Mental Health Legislative Reform</i>) was a legislative initiative, involving amendments to the <i>Mental Health Act</i> and the <i>Health Care Consent Act</i> which was proclaimed on December 1, 2000.</p> <p>Community Treatment Orders (CTOs) provide a legal mechanism for people with serious mental illness to receive treatment, support and supervision in the community. In partnership with the client and service providers, a comprehensive plan is developed that is less restrictive than hospitalization. This program is for people who experience recurrent hospitalizations, benefit from treatment and usually do not engage in out patient follow-up. Only physicians can initiate a community treatment order, which is limited to six months in duration. The CTO coordinator provides assistance with drafting the plan, ensuring Rights Advice and securing community services for the client. The CTO case manager is available for support, monitoring and developing linkages to community supports and agencies.</p>

Overview	
Description	<p>The Daily Census Summary (DCS) is a database created by the MOHLTC using hospital monthly submissions on their Daily Bed Census. It is the most definitive source of information for patient volumes and related information. It includes the number of admissions and separations, average length of stay, occupancy rates, as well as the number of beds staffed and in operation.</p> <p>The Daily Census Summary contains data from 1988 through the most recent completed fiscal year, and includes:</p> <ul style="list-style-type: none"> • Hospital/Facility Name • Number of Hospital Beds by type • Number of Admissions • Number of Separations • Number of Annual Newborn • Admissions by Level of Care (acute, chronic, rehabilitation) • Separations by Level of Care (acute, chronic, rehabilitation) • Patient Days by Level of Care (acute, chronic, rehabilitation) • Occupancy Rates by Level of Care (acute, chronic, rehabilitation) • Average number of beds in operation • Beds Staffed and in Operation <p>On a monthly basis, hospitals are required to submit daily bed information to the Ministry of Health and Long-Term Care (MOHLTC). This is the source for Patient Days (including Separations and Admissions), Average Length of Stay, Occupancy Rates, Beds (Staffed and in Operation and the Average Occupancy).</p>

Overview	
Description	The Facility Monitoring Information System (FMIS) contains information on long-term care facility (LTC) compliance management, enforcement and licensing information. It is used to track and maintain information for all LTC facilities, including Nursing Homes and Homes for the Aged in the province. FMIS is used to examine staff workload, compare LTC facility information and compliance issues. It also supports a contact list.

Overview	
Description	<p>The Master Numbering System (MNS) maintains the master/institution numbers for all Ontario facilities (hospitals, long term care facilities, community health services, etc.). The MNS files are used directly by many of the Ministry of Health and Long-Term Care's (MOHLTC) systems in the production of reports/listings in different sequences and for the publishing of an annual Code Book.</p> <p>The MNS was designed to merge all Health Facilities and Programs into one system for identification. The list is comprised of health and health related units, facilities, clinics, programs and services. Each organization has been assigned a unique four digit identifying code.</p>

Overview	
Description	<p>The Medical Trainee Database (MTD) supports medical trainee data collection and reporting. Information is collected for the purpose of developing an equitable funding allocation for Ontario Public Hospitals. Starting in the 2001/2002 fiscal year, Ontario Public Hospitals have submitted their MTD to the Ministry of Health and Long-Term Care (MOHLTC). The MOHLTC Hospital Funding Committee uses this data to calculate the Teaching Data Adjustment for the funding formula. It is also used for accountability purposes.</p> <p>The MTD database program and submission process assists hospitals with inputting and submitting their data directly to the database. The MOHLTC has developed the Joint Policy & Planning Committee's (JPPC) data standards to comply with current information and management practices. This will support provincially standardized data elements within all Ontario Public Hospitals.</p>

	Finance and Information Management Branch	Information Mgmt. Coordinator	Michael Byrnes	(416) 327-7770	Michael.Byrnes@moh.gov.on.ca

ADDITIONAL NOTES

The collection of Medical Trainee Data follows a comprehensive information management strategy consisting of analysis of data quality by validity, reliability and standards. Reconciliation of data issues, such as resolution of conflicting records and accountability of data is audited.

Participating hospitals/sites must submit medical trainee data if their medical trainee days are significant enough to report. This is an internal hospital decision. For each hospital submitting medical trainee data, the following levels of detail are mandatory: Hospital and/or Site Information (hospital/site name, facility code, and primary and secondary contact information) and Medical Trainee Information (each medical student's rotation including medical school, student name, CPSO/student numbers, rotation dates (start and end), education level and corresponding program and service descriptions. Each medical trainee's or student's rotation must be reported on a singular basis. That is, each rotation is to be entered as a separate training record.)

Overview	
Description	<p>The Ontario Case Costing Initiative (OCCI) was created to continue the work started by the Ontario Case Costing Project (OCCP). The primary objectives of the OCCI are the collection of case costing data in support of improved management decision making and the development of weights used in hospital funding methodologies as well as hospital funding methodologies. The OCCI is collecting case cost data for acute inpatient, day surgery and ambulatory care cases. In the near future, Complex Continuing Care data will also be submitted by hospitals.</p> <p>The OCCI database is a patient-specific case cost database of acute inpatient, day surgery, emergency as well as limited chronic, rehabilitation and high cost clinics data from participating hospitals. The following is a brief description of the basic components that form the OCCI database. For each patient there are two sources of data that make up the case cost record. The first is the cost data from the hospitals that has been produced, based on the OCCI costing methodology. The second is the patient discharge abstract collected by the Canadian Institute for Health Information (CIHI). The discharge abstract contains patient descriptive, demographic and clinical data. Patient descriptive data allows the OCCI database to be more robust. The patient descriptive component contains the data elements required for grouping patients by patient classification systems, e.g., case mix groups (CMGs), and diagnostic related groups (DRGs). Thus, any patient grouping can be costed by simply re-grouping patients.</p> <p>At a minimum, each hospital provides the total direct and indirect costs by Ontario Health Reporting System (OHRS) functional centre for each patient. All functional centres must be reported at a minimum of level 4. Therefore, hospitals are required to provide total direct and indirect costs incurred by patients for Nursing, Ambulatory Services, Clinical Laboratory, Diagnostic Imaging, Pharmacy and Allied Health. However, some Project hospitals have gone beyond the minimum standard and provided data at level 5. The cost and discharge abstract data files are merged based on the institution number, the patient's chart number, registration number, and the admission date. The cost data by itself would limit the scope of analysis. The patient descriptive data adds value to the cost data by describing the context and circumstances from which the costs were generated. Together, in the OCCI database, the data provides a powerful analytical tool to begin examining costs from a number of different perspectives. For example, measuring the cost variance between surgeons for knee replacements. The OCCI has also begun to "re-group" past years data with current CMG grouping methodology. This allows for the comparison of a given CMG's costs over a number of years.</p>

Surgery Data	Data on emergency, ambulatory and complex continuing care. Fiscal Year April to March.					Earliest Data: _____ Latest Data: _____ Update Freq.: _____ Mandatory? _____

USAGE CONSTRAINTS

Privacy Constraints	Access is limited to MOHLTC FIM Branch. All patient identifiers are encrypted. The database does not store patient names or street addresses.
Restricted Copy Rules	OCCI cannot be copied in whole or in part except as described below under Derived Works Limitations. Administration is restricted to FIM.
Derived Works Limitations	All outputs must contain aggregated values only. Small cell counts (< 5) must be suppressed. By special arrangement single records can be extracted on a one-time only basis. Any Data request for small cell counts must be approved by FIPPA. Under the terms of the license, the OCCI cannot be used as data “feed” for any other database or system.

DATA ACCESS

Network Accessibility	<input checked="" type="checkbox"/> None <input type="checkbox"/> Internet <input type="checkbox"/> Intranet <input type="checkbox"/> VPN <input type="checkbox"/> SSHA Network <input type="checkbox"/> Others: _____
DSS Tools	Currently OCCI staff use SAS to query directly on database

Overview

Description	<p>The Ontario Financial and Statistical System (OHFS) is the database for the Management Information System (MIS). It contains financial and statistical data from integrated healthcare programs (Hospitals, Community Care Access Centres (CCAC), Children's Treatment Centres (CTC) and some Community Mental Health and Addictions Programs). The Ontario Healthcare Financial and Statistical System (OHFS) is used in conjunction with the Ontario Healthcare Reporting System (OHRS). The OHRS outlines the requirements for data collection for planning, monitoring and reporting on health service activities. The OHFS contains the following types of information:</p> <ul style="list-style-type: none"> Financial and statistical data for transfer payment agencies (hospitals, CCAC's, CTCs, community mental health agencies & addiction programs) Balance sheets Delivery cost of health care services (i.e.- compensation costs, operating expenses, equipment cost information, referred out costs, sundry costs) Employment skill mix and employment status Financial and statistical data for producing performance indicators at both the facility and functional centre level. Note: Only submissions that have passed all edit stages will exist in the database. If a facility resubmits, the previous submission data will be replaced by the new submission when it has passed all edit stages.

Overview	
Description	<p>The OMHRS will be the repository for Minimum Data Set – Mental Health (MDS-MH) data submitted by Ontario hospitals with designated mental health beds. This includes general hospitals with designated psychiatric units, specialty and provincial psychiatric hospitals. The MDS-MH includes demographic, administrative and clinical data collected through the assessment of patients on admission, discharge and at specific intervals during their hospital stay by frontline clinicians.</p> <p>In addition to the use of the data by frontline hospital staff to develop care plans for psychiatric patients, CIHI will collect and process MDS-MH data and provide provincial and hospital-specific outcome measures and quality indicators reports to the hospitals. Using the mental health data collected, a case-mix methodology called the System for the Classification of Inpatient Psychiatry (SCIPP) has been developed to provide the ministry with data for funding adjustments to the IPBA funding formula.</p> <p>The MDS-MH, outcomes measure, quality indicators and SCIPP are known collectively as the Resident Assessment Instrument – Mental Health (RAI-MH). It was developed for Ontario by the Joint Policy and Planning Committee (JPPC) and interRAI, an international network of researchers. The MOHLTC has mandated the collection of the data by Ontario hospitals beginning October 1, 2005.</p>
Info Holding Owner	<p>National: Ontario data will be processed by Canadian Institute for Health Information (CIHI) and stored at CIHI for inclusion in national reports</p> <p>Ontario: Copy of Ontario data is held by Knowledge Management and Reporting Branch, IPP</p>
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input checked="" type="checkbox"/> Restricted Copy <input type="checkbox"/> Does not own a copy <input type="checkbox"/> Not Applicable Copy Owner: Knowledge Management & Reporting Branch, IPP

USAGE CONSTRAINTS

Privacy Constraints	<p>National CIHI has in place a comprehensive Privacy, Confidentiality and Security Program. One key element of the program is CIHI's statement of principles and policies that guide CIHI's operations and informs others of CIHI's practices. The principles and policies are reviewed and updated regularly. The principles and policies are set out in the document Privacy and Confidentiality of Health Information at CIHI: <i>Principles and Policies for the Protection of Personal Health Information and Policies for Institution-Identifiable Information, 3rd Edition</i>. See link: http://www.cihi.ca.</p> <p>Ontario: Access to the file requires signing of Data Access agreement with Knowledge Management & Reporting Branch. Agreement covers all aspects of patient privacy, confidentiality, authorized use, and data disposal.</p>
Restricted Copy Rules	Health Card Numbers uniquely encrypted for each user. Small cell counts/residual rules to be applied.
Derived Works Limitations	As specified in Data Access Agreement

DATA ACCESS

Network Accessibility	<input type="checkbox"/> None <input type="checkbox"/> Internet <input type="checkbox"/> Intranet <input checked="" type="checkbox"/> VPN <input type="checkbox"/> SSHA Network <input checked="" type="checkbox"/> Others: Data CD, DVD
DSS Tools	Open database architecture. Data can be accessed using any programming language/software capable of reading non-delimited flat text files. This includes SAS, SPSS, FOCUS, PLI/1, COBOL, and C.

SYSTEM REQUIREMENTS

Licensing	Users must complete Data Access Agreement with Knowledge Management & Reporting Branch (MOHLTC)

Overview	
Description	<p>The Regional Office Allocations Database (ROAD) contains transfer payment information for Long-Term Care (LTC), Community Mental Health, Substance Abuse and other agencies. Specifically, ROAD is designed to store and maintain scheduled community agency allocation and payment information (e.g. for Community Care Access Centres (CCAC's), Children's Treatment Centres (CTC), Community Mental Health & Additions Programs (CMH&A), and other agencies)</p> <p>ROAD was originally developed by the Finance unit of the East Region Long-Term Care office in 1998/1999 to store and maintain community agency allocation and payment information. The Central South region recognized this tool could be further developed to standardize the tracking of allocations and payments for all transfer payment agencies consistently between regional offices. Through interaction with regional office financial staff, the Information Technology Unit began redevelopment in March 2002. The application was piloted in the Central South Region with implementation in all Regions in November 2002.</p> <p>On April 1, 2004, IFIS was implemented at the Ministry of Health and Long-Term Care. ROAD was used as a template for the development of an interface to IFIS. The Transfer Payment Allocation System (TPAS), schedule payments into IFIS. Currently, ROAD continues to be used to track allocation information and acts as a tool to provide information for the population of TPAS.</p>

ADDITIONAL NOTES

The Ministry of Municipal Affairs and Housing (MMAH) transferred responsibility for provincially dedicated supportive housing to the Ministry of Health and Long-Term Care on April 1, 1999. At that time, it encompassed 3,109 units in 232 housing projects managed by 83 housing providers. The Regional Offices of the Ministry of Health and Long-Term Care (MOHLTC) provide the supportive housing agencies with funding to support their clients. The Supportive Housing Unit of MOHLTC provides the supportive housing agencies with operating and rent subsidy to cover "bricks and mortar" costs. The operating subsidy is based on operating costs, taxes, mortgage payments and capital reserve allowance. Rent subsidy is calculated based on the difference between unit rent factor and Rent-Geared-to-Income (RGI) revenue. RGI is calculated as 30% of gross income, (less on earned income deduction if applicable) plus or minus utility charges. It is based on a Ministry set scale if the tenant is in receipt of social assistance.

Overview	
Description	<p>The Ministry of Health and Long Term Care (MoHLTC) Aligned Tools & Knowledge Access Guide (ATKA) is intended to be a resource directory to information resources, data warehouses and tools managed by the MoHLTC and affiliated agencies that are useful to policy and planning analysts and decision and policy-makers. As an integral part of the Health Results Team on Information Management project, the tool is intended to simplify the process of locating information resources and data providers.</p> <p>The key components of ATKA are:</p> <ul style="list-style-type: none"> ▪ Key Decision Support Analysts/Experts Directory – profiles of business, information, data, and research analysts supporting planners, decisions- and policies-makers in the MOHLTC. ▪ Information Holdings Database – profiles of the information holdings within the Ontario Health System, and contact information of data extraction specialists, administrative and technical support for these databases. A key value of this database is the series of data quality standards that the HRT-IM team is developing with the data providers. ▪ Performance Indicators – profiles of key performance indicators reported or proposed for the Ontario Health System, with details on indicator definitions, data sources and quality, reporting requirement, etc. The fully functioning inventory will allow for querying and grouping of indicators by different characteristics/criteria.

Overview

Description	<p>CHDB is the repository of information retained by the ministry relating to medical claims submitted by providers for health care services provided to eligible Ontario residents. The database is used in the assessment and processing of claims and is a financial record of monies paid to a provider for services billed on behalf of Ontario residents. The database is also used to produce personal health histories upon the Ministry of Health and Long-Term Care (MOHLTC) receiving a Freedom of Information (FOI) request. All eligible Ontario residents have the right to request a copy of all of their health history. Freedom of Information and Protection of Privacy Act (FOIPPA) outlines certain information that is to be made available upon request. The data for the personal health histories is extracted from CHDB. The histories are scheduled separately and fall under a different program area.</p> <p>The database consists of three electronic database DB2 (IBM rational database software) tables:</p> <ol style="list-style-type: none"> 1) Claim Reference (claim_reference) 2) Claim History (claim_history) 3) Services Not Provided (services_not_prvd) <p>Both the claim_reference and claim_history tables in CHDB contain all of the approved claims for Ontario residents that are processed through the Medical Claims Assessment System (MASS), a sub-system of the Medical Claims System. (Refer below to the Medical Claims System Overview for a brief summary of the processing system). Claims that have either been proven fraudulent in a court of law or the ministry has determined that a service was not provided, are moved from the claim_reference and claim_history tables and placed in the services_not_prvd table</p>

Overview	
Description	The Corporate Provider Database (CPDB) is an integrated repository of health care <i>stakeholder</i> registration and program eligibility information used for operational and planning purposes. The database includes individual providers such as physicians, pharmacists, and other practitioners, as well as organizations such as provider groups, hospitals, independent health facilities, primary care groups, and alternate payment providers. CPDB is corporate in nature, in that the data and processing functions are shared by various programs and functional areas across the Ministry. CPDB replaced the Health Resources Register (HRR) as the primary provider registration database in 1995. It is used extensively by OHIP and other Ministry programs to validate a provider's program eligibility. The on-line system facilitates the daily updating of provider data for regulated and non-regulated health care professionals.

Overview

Description	The LILI database provides on-line ready access to licensing data for medical laboratories and specimen collection centres licensed under the <i>Laboratory and Specimen Collection Centre Licensing Act</i> and its regulations. It allows Laboratories Branch staff to process licence renewals and to track inspections of these licensed facilities. It interfaces with the following external entities - Kingston's OHIP system, the Human Resources Registry (HRR) and the Ontario Medical Association's Quality Management Program-Laboratory Services (QMP-LS).

Overview

Description	<p>The Ontario Drug Benefit (ODB) program database contains prescription claims data for eligible recipients of the program. The data is collected through the Health Network System (HNS) which links all drug dispensing agencies in Ontario to a central ministry electronic system. The HNS provides on-line prescription claims processing and adjudication for the reimbursement of prescription medications for eligible recipients. The database is used to support the operations of the ODB program including reimbursement of dispensing agencies, financial reporting on expenditures, forecasting for future needs and post-payment verification to monitor adherence to policies. The information is also used for research purposes to evaluate drug utilization patterns and prescribing practices.</p> <p>The ODB database contains prescription claims data in the Claims History Database which is linked to the Registered Persons Database (RPDB) (recipient demographic data) and the Corporate Provider Database (CPDB) (prescriber demographic data).</p>					
Info Holding Owner	Drug Programs Branch (MOHLTC)					
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input type="checkbox"/> Restricted Copy <input type="checkbox"/> Does not own a copy <input checked="" type="checkbox"/> Not Applicable				Copy Owner:	
Target Audience	Drug Programs Branch, Institute of Clinical Evaluative Sciences (ICES), Internal/External requests (e.g., patients, other provincial ministries and programs, Federal/Provincial/Territorial groups, clinical researchers, etc.)					
Data Sources	<input checked="" type="checkbox"/> Primary <input checked="" type="checkbox"/> Secondary		Sources:	Submitted by pharmacies and linked with data from RPDB and CPDB		
Population Groups	The Ontario Drug Benefit (ODB) program provides coverage for prescribed medications to eligible recipients including: Ontario residents aged 65 and over, Ontario residents under 65 receiving social assistance, Ontario residents receiving professional services under the Home Care Program, people eligible under the Trillium Drug Program, residents of Long-Term Care facilities and Homes for Special Care. The eligibility of the Ontario residents under 65 receiving social assistance, Ontario residents receiving professional services under the Home Care Program, and people eligible under the Trillium Drug Program tend to be sporadic (i.e., on and off) and may result in an incomplete drug data history.

Overview

Description	<p>The Registered Persons Database (RPDB) is a Personal Information Bank, which is a collection of personal information that is organized and can be retrieved by an individual's Health Number. The RPDB is the database containing information on all persons who are registered for the purposes of Ontario health insurance coverage and the Ontario Drug benefits. This database supports the OHIP and ODB claims payments.</p> <p>Health Services Divisions, Registration and Claims Branch maintains the RPDB, which contains more than 12 million records that are updated regularly as a result of registration activities. The RPDB is critical to the functioning of a number of key programs that deliver vital health services to the public (i.e. access to hospital services, access to physician services, access to drug benefits, payment of inter-provincial reciprocal medical and hospital claims, and access to services provided by CCACs, among others). In addition, the database is used by providers to confirm their patients' eligibility for insured health services.</p> <p>This database contains client information such as name, gender, and date of birth, address, citizenship, OHIP/ODB eligibility and Health Card</p>

Overview	
Description	Canadian Paediatric Ischemic Stroke Registry (CPISR) collects comprehensive population based data on pediatric ischemic stroke (arterial ischemic stroke and sinus thrombosis) CPISR provides information needed for randomized clinical trials testing medical treatments for childhood stroke. The geographic coverage is the 16 pediatric tertiary care centres in Canada (including the 5 Ontario centres)

Overview

Description	<p>The Health Information Library (HIL) is a repository of health information maintained on one of Knowledge Management & Reporting Branch's (KMRB) file servers. The HIL has two purposes:</p> <ul style="list-style-type: none"> - Provide an alternative to the Provincial Health Planning Database (PHPDB) for users who wish to run queries involving "heavy-duty" statistical software (e.g. SAS, SPPS) - Provide an enriched source for researchers and others who are not able to have access to the Provincial Health Planning Database <p>The Standard Files/Enhanced Masters in the HIL are derived from the CIHI Discharge Abstract Database (DAD) and National Ambulatory Care Reporting System (NACRS) Master Files. The files are designed to contain the variables that are most frequently used for reports/retrievals. Key characteristics are patient location (geography), hospital geography, age, sex, and birth date, admission/discharge information, triage (NACRS only), patient diagnoses, interventions performed when applicable, case groupers and resource weighting. A feature of the standard files are the value-added attributes, not present in the original sources, designed to make querying easier and more "foolproof" for the end-user.</p> <p>There are three sets of Standard Files:</p> <ol style="list-style-type: none"> 1. Acute Inpatient Discharges (From DAD) 2. Day Procedures/Day Surgery (from DAD) – discontinued after fiscal 2002/2003 3. Ambulatory Visits (from NACRS) <p>The Standard Files are maintained by KMRB's Registry and Retrieval Services unit. See Contacts below for more information.</p>

DATA TABLES

File Name	File Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
Acute Inpatient Discharges Standard File	Derived from DAD Acute Inpatient Abstract. Includes patient demographics, patient/hospital geographic identifiers, admission/discharge information, case disposition, length of stay, clinical diagnoses, interventions performed, case groupers and case weights	Encrypted HN, Master Number of Reporting Institution	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINs,	Earliest Data: FY 1995-96 Latest Data: FY 2004-05 Update Freq.: Annual Mandatory? Yes
Day Procedures Standard File	Derived from DAD Day Procedures/Day Surgery Abstract. Includes patient demographics, patient/hospital geographic identifiers, admission/discharge information, case disposition, clinical diagnoses, interventions performed, case groupers and case weights Note: System discontinued after 2002/2003. Data now reported to NACRS	Encrypted HN, Master Number of Reporting Institution	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINs,	Earliest Data: FY 1995-96 Latest Data: FY 2002-03 Update Freq.: n/a Mandatory? Yes
Ambulatory Care Visits Standard File	Derived from the National Ambulatory Care Reporting System. Covers Ambulatory Care in Ontario hospitals including Emergency Room and beginning in 2003/2004, Day Surgery, Med/Day Night Care and selected high-cost ambulatory clinics. Data includes patient demographics, patient/hospital geographic identifiers, admission/triage/discharge information, triage (ER only), various milestone dates/times, visit disposition, clinical diagnoses, interventions performed, case groupers and case weights	Encrypted HN, Master Number of Reporting Institution	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINs	Earliest Data: FY 2001/02 Latest Data: FY 2004/05 Update Freq.: Annual Mandatory? Yes

USAGE CONSTRAINTS

Privacy Constraints	All Health Numbers are encrypted using a key/algorithm unique to the HIL. The files do not contain patient names or street addresses.
Restricted Copy Rules	Data may be copied/downloaded in conformance with terms of user licence/research agreement.
Derived Works Limitations	All outputs must contain only aggregated values. Small cell counts (< 5) must be suppressed for confidentiality. The Standard Files are for retrievals/reporting only and cannot be used as a data “feed” for any other database or system.

DATA ACCESS

Network Accessibility	<input type="checkbox"/> None <input type="checkbox"/> Internet <input checked="" type="checkbox"/> Intranet <input checked="" type="checkbox"/> VPN <input type="checkbox"/> SSHA Network <input type="checkbox"/> Others: _____
DSS Tools	SAS, SPSS, ACCESS, EXCEL or any software capable of reading/processing “flat” ASCII non-delimited text files Users must also have access to a WINZIP or similar software as all files are “zipped” to reduce their size for downloading.

SYSTEM REQUIREMENTS

Licensing	Users must either be currently licenced users of the PHPDB and/or have completed a KMRB research agreement before being given access.
Software Requirements	See DSS Tools
User Platform	<input type="checkbox"/> Web browser <input checked="" type="checkbox"/> Windows 2000/XP <input type="checkbox"/> Mac OS 9 / X <input type="checkbox"/> Unix <input type="checkbox"/> Linux
Network Requirements	<ul style="list-style-type: none"> ◆ TCP-IP connection ◆ VPN and PKI accounts are required for remote users Local Area Network through your Internet Service Provider (No Dial-up Modems required)

CONTACTS

Support/Questions	Support Organization	Title	Name	Phone #	E-Mail
General	Knowledge Management & Reporting Branch	Manager, HDDSU	Doug Ramsay	(416) 327-7649	Doug.Ramsay@moh.gov.on.ca
Specific Requests	Knowledge Management & Reporting Branch	Coordinator, RRS	Terry Stevens	(416) 327-7716	Terry.Stevens@moh.gov.on.ca

ADDITIONAL NOTES

KMRB is considering updating the Standard Files at the end of the second and third fiscal quarters as well as the end of the year. Final decision is dependent on availability of resources and identification of specific ministry uses for such updates.
It is expected that more sources will eventually be added to the HIL as user needs become known.

Overview	
Description	<p>The Provincial Health Planning Database (PHPDB) is a standardized database of health-related demographic, clinical, and statistical data created/derived from a variety of internal and external sources. It is also known as the Data Warehouse. The data is stored in a relational database for easy do-it-yourself extraction/querying and analysis by a user community within and outside the Ministry using the Hummingbird Bi/Query software suite.</p> <p>The information holding includes selected hospital information, home care information, vital statistics (births and deaths), and population information. Key characteristics are patient location (geography) including LHIN, hospital location, age, sex, and birth date, admission/discharge information, triage (ER only), patient diagnoses, interventions performed when applicable, case groupers and resource weighting. A feature of the database are the value-added attributes, not present in the original sources, designed to make querying easier and more “foolproof” for the end-user.</p>
Info Holding Owner	Knowledge Management & Reporting Branch (MOHLTC) – holder and creator of DB

Data Sources	<input type="checkbox"/> Primary <input checked="" type="checkbox"/> Secondary Sources: CIHI Discharge Abstract Database (DAD), CIHI National Ambulatory Care Reporting System (NACRS), CIHI Continuing Care Reporting System (CCRS), National Rehabilitation Reporting System (NRS), Ontario Home Care Administration System (OHCAS), OHIP Approved Claims, Statistics Canada Population Estimates & Ministry of Finance Population Projections
Population Groups	Geo. – Region, County, Municipality, PHU, Postal Code, LHIN, DHC (for historical reference) Coverage Level – Varies with source.
Data Granularity	<input checked="" type="checkbox"/> Personal <input checked="" type="checkbox"/> Anonymous <input type="checkbox"/> Pseudonymous <input type="checkbox"/> Aggregated Aggregation Levels: Except for population estimates and projections, users need to do their own aggregations

DATA TABLES

Table Name	Table Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
Inpatient Discharges	Derived from DAD Abstract. Includes patient demographics, patient/hospital geographic identifiers, admission/discharge information, case disposition, length of stay, clinical diagnoses, interventions performed, case groupers and case weights	Encrypted HN, Master Number of Reporting Institution	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINS	Earliest Data: FY 1996/97 Latest Data: FY 2004/05 Update Freq.: Annual Mandatory? Yes
Day Procedures (discontinued)	Similar to inpatient discharges except restricted to procedures/surgery performed on a day basis (i.e. non-inpatient) . Became part of Ambulatory Visits FY 2003/2004	Encrypted HN, Master Number of Reporting Institution	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINS	Earliest Data: FY 1996/97 Latest Data: FY 2002/03 Update Freq.: n/a Mandatory? Yes
Ambulatory Care Visits	Derived from the National Ambulatory Care Reporting System. Covers Ambulatory Care in Ontario hospitals including Emergency Room, Day Surgery, Med/Day Night Care and selected high-cost ambulatory clinics. Data includes patient demographics, patient/hospital geographic identifiers, admission/triage/discharge information, various milestone dates/times, visit disposition, clinical diagnoses, interventions performed, case groupers and case weights	Encrypted HN, Master Number of Reporting Institution	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINS	Earliest Data: FY 2001/02 Latest Data: FY 2004/05 Update Freq.: Annual Mandatory? Yes
Complex Continuing Care (colloquially called Chronic Hospitals)	Derived from the Complex Continuing Care Reporting System. Covers patients/residents in Ontario Complex Continuing Care institutions. Data includes patient demographics, patient/hospital geographic identifiers, admission/discharge information, various assessment dates/times, visit disposition, patient conditions, case groupers and case weights	Encrypted HN, Master, Number of Reporting Institution, Unique Case Identifier (URI)	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINS	Earliest Data: Jul 1996 Latest Data: ~Jun 2005 Update Freq.: Annual Mandatory? Yes
Inpatient Rehabilitation	Derived from the National Rehabilitation Reporting System. Covers adult patients in Ontario inpatient rehabilitation institutions. Data includes patient demographics, patient hospital geographic identifiers, admission discharge/information, FIM assessment information collected at admission and discharge, and rehab. related diagnostic information	Encrypted HN, Master, Number of Reporting Institution, Unique Episode Number	Hospitals via CIHI	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINS	Earliest Data: Oct 2002 Latest Data: ~Sep. 2005 Update Freq.: Annual Mandatory? Yes
Home Care (OHCAS)	Derived from the Ontario Home Care Administration System. Contains Home Care client registration and service information. Data includes client demographics, client geographic identifiers, admission/referral/discharge information, case disposition, diagnosis, services ordered/delivered	Encrypted HN, Home Care/CCAC Program Number	CCAC	Resident & Institution/ Provider	Region, County, Municipality, PHU, LHINS (limited)	Earliest Data: FY1999/00 Latest Data: ~June 2005 Update Freq.: TBD Mandatory? Yes

DATA TABLES

Table Name	Table Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
Medical Services	Derived from OHIP Approved Claims. Contains all Fee-for-Service and some Shadow Billing/alternate payment program data. Data includes patient and provider demographics, geographic identifiers, date of service, OHIP specialty code, Fee Schedule Code and volume of services. There is no financial information (Amount Billed/Amount Paid etc.) except by special arrangement.	Encrypted HN, Encrypted Provider Number	MOHLTC (OHIP)	Resident & Provider	Region, County, Municipality, PHU, LHINs	Earliest Data: FY 2000/01 Latest Data: FY 2004/05 Update Freq.: Annual Mandatory? Yes
Ontario Residents	Selected attributes from the OHIP Registered Persons Database. Data includes age, sex, postal code, effective dates, termination code	Encrypted HN	MOHLTC	Resident	Postal Code, other levels can be derived by user	Earliest Data: FY 1991-92 Latest Data: FY 2004/05 Update Freq.: Annual Mandatory? Yes
Populations	Counts, estimates and projections approved by Ministry of Finance	N/A	Statistics Canada/MOF	n/a	Region, DHC, County, Municipality, PHU, LHINs (Estimates only)	Earliest Data: Est. 1986 Latest Data: Est. 2004 Update Freq.: Proj. 2031 Mandatory? When available n/a
Vital Statistics	Live births and deaths and stillbirths occurring in Ontario	Encrypted Registration Number	Office of the Registrar General of Ontario via Statistics Canada	Resident & Location of Incident (Birth, Death)	Region, DHC, County, Municipality, PHU, LHINs, Postal Code (Residence only)	Earliest Data: CY 1986 Latest Data: CY 2002 Update Freq.: Annual Mandatory? Yes

USAGE CONSTRAINTS

Privacy Constraints	All Health Numbers and Provider Numbers are encrypted using a key/algorithm unique to the DB. The database does not store patient names or street addresses.
Restricted Copy Rules	The PHPDB cannot be copied in whole or in part except as described below under Derived Works Limitations
Derived Works Limitations	All outputs must contain only aggregated values. Small cell counts (< 5) must be suppressed for confidentiality. By special arrangement single records can be extracted on a one-time only basis. Under the terms of the license, the PHPDB cannot be used as a data “feed” for any other database or system.

DATA ACCESS

Network Accessibility	<input type="checkbox"/> None <input type="checkbox"/> Internet <input checked="" type="checkbox"/> Intranet <input checked="" type="checkbox"/> VPN <input type="checkbox"/> SSHA Network <input type="checkbox"/> Others: _____
DSS Tools	Hummingbird BI/Query software only. Aggregated information obtained through BI/Query may be downloaded for use in any appropriate software package (e.g. Microsoft Excel) but no other software may be used to connect/query the database. Submission of “raw” SQL queries is also not permitted. SAS Enterprise Guide is being evaluated as an alternate query/analysis tool.

SYSTEM REQUIREMENTS

Licensing	User organizations and all individuals wishing to use the database are required to sign an annually renewable License Agreement governing their access to the database. Users must complete a two day training course covering the use of the BI/Query software and an introduction to the data. Persons interested in becoming a Provincial Health Planning Database user will need to complete a "PHPDB User Application" form (at http://portal.healthdss.moh.gov.on.ca/) and fax or mail it to the Knowledge Management & Reporting Branch at the address indicated on the form.
Software Requirements	Hummingbird BI/Query User version 8.5.
User Platform	<input type="checkbox"/> Web browser <input checked="" type="checkbox"/> Windows 2000/XP <input type="checkbox"/> Mac OS 9 / X <input type="checkbox"/> Unix <input type="checkbox"/> Linux
Network Requirements	<ul style="list-style-type: none"> ◆ TCP-IP connection ◆ VPN and PKI accounts are required for remote users <ul style="list-style-type: none"> ● Local Area Network through your Internet Service Provider (No Dial-up Modems required)

CONTACTS

ADDITIONAL NOTES

KMRB is considering updating Inpatient Discharges and Ambulatory Visits at the end of the second and third fiscal quarters as well as the end of the year. Final decision is dependent on availability of resources and identification of specific ministry uses for such updates. The next new data source likely to be added to the PHPDB is the Ontario Mental Health Reporting System (OMHRS) which began to collect data in inpatient mental health cases in Oct. 2005. This will likely occur during the 2006/2007 fiscal year.

Vital Statistics (Livebirths, Stillbirths, Deaths)

	Wait Time Related	<input type="checkbox"/> Cancer Services <input type="checkbox"/> Cardiac Services <input type="checkbox"/> Cataract Surgery <input type="checkbox"/> Hip/Knee Joint Replacement <input type="checkbox"/> MRI/CT Scan <input type="checkbox"/> Other: _____		
	Age Groups	<input checked="" type="checkbox"/> Children (0-11) <input checked="" type="checkbox"/> Youth (12-17) <input checked="" type="checkbox"/> Adult (18-64) <input checked="" type="checkbox"/> Seniors (65+)		
	Other Topics	<input type="checkbox"/> Diabetes <input type="checkbox"/> Morbidity <input type="checkbox"/> Mortality <input type="checkbox"/> Osteoporosis <input type="checkbox"/> Paediatrics <input type="checkbox"/> Patient Safety <input type="checkbox"/> Prescription Drugs <input type="checkbox"/> Trauma/Injuries <input type="checkbox"/> Women's Health <input checked="" type="checkbox"/> Other: <u>Births, Deaths</u>		
Web URL	Information:	N/A	Login:	N/A

Overview	
Description	<p>The Vital Statistics data files contain data collected by the Office of the Registrar General, Ministry of Government Services when registering Ontario births and deaths. There are three files provided for each calendar year:</p> <ol style="list-style-type: none"> 1. Livebirths in Ontario 2. Stillbirths in Ontario 3. Deaths in Ontario <p>Births data includes information about the baby (sex, date of birth, place of birth, birth weight, gestational age) and the parents (age, place of residence, birthplace). For Stillbirths an additional item is included for the cause of the stillbirth.</p> <p>The Deaths data includes information about the death (place, cause, disposition of body) and the deceased (sex, age, place of residence, marital status). All data is first sent to Statistics Canada for editing for consistency with the national Vital Stats. database before it is made available to the MOHLTC. There is a delay of about two years in the availability of data for a specific calendar year.</p> <p>Note</p> <ol style="list-style-type: none"> 1) Vital Statistics files do not include births/deaths that occurred outside Ontario to Ontario residents. 2) These files are the source for the equivalent tables in the Provincial Health Planning Database (see separate entry) and for the HELPS system maintained by the Ministry of Health Promotion.
Info Holding Owner	Knowledge Management & Reporting Branch (MOHLTC)
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input checked="" type="checkbox"/> Restricted Copy <input type="checkbox"/> Does not own a copy <input type="checkbox"/> Not Applicable Copy Owner: Knowledge Management & Reporting Branch (MOHLTC)
Target Audience	Planning and decision support staff in the MOH/MHP (Ministry of Health Promotion) ministries, epidemiologists in PHUs. LHIN analysts are expected to be added to the audience in 2006/2007 pending the passing of LHIN enabling legislation.
Data Sources	<input type="checkbox"/> Primary <input checked="" type="checkbox"/> Secondary Sources: Livebirths, Stillbirths, Deaths registrations from the Office of the Registrar General, Ministry of Government Services via Statistics Canada
Population Groups	Geo. – Municipality (Location of Event, Location of Residence), Postal; Code (Location of Residence beginning 1996) Coverage Level – All Livebirths, Stillbirth and Deaths occurring in Ontario which were registered in the reference year

Data Granularity Personal Anonymous Pseudonymous Aggregated **Aggregation Levels:** None. Data is at the individual birth/death level

DATA TABLES (Not Available for the Guide)

Table Name	Table Description	Primary Identifiers	Data Collection Location	Resident and/or Provider	Geographic Codes (Postal, LHIN...)	Data Availability
Livebirths	Livebirths occurring in the province of Ontario regardless of the residence of the mother	None	Office of the Registrar General via Statistics Canada	Resident	Residence (Municipality, Postal Code) Location of birth (Municipality)	Earliest Data: CY 1992 Latest Data: CY 2002 Update Freq.: Annual Mandatory? Yes
Stillbirths	Stillbirths occurring in the province of Ontario regardless of the residence of the mother	None	Office of the Registrar General via Statistics Canada	Resident	Residence (Municipality, Postal Code) Location of birth (Municipality)	Earliest Data: CY 1992 Latest Data: CY 2002 Update Freq.: Annual Mandatory? Yes
Deaths	Deaths occurring in the province of Ontario regardless of the residence of the deceased	None	Office of the Registrar General via Statistics Canada	Resident	Residence (Municipality, Postal Code) Location of death (Municipality)	Earliest Data: CY 1992 Latest Data: CY 2002 Update Freq.: Annual Mandatory? Yes

USAGE CONSTRAINTS

Privacy Constraints	Data does not contain Health Numbers or any other identification number, name and/or address information that would allow this data to be linked to other sources
Restricted Copy Rules	Access to MOHLTC, MHP, PHU personnel only.
Derived Works Limitations	All outputs must contain only aggregated values. Small cell counts (< 5) must be suppressed for confidentiality.

DATA ACCESS

Network Accessibility	<input type="checkbox"/> None <input type="checkbox"/> Internet <input checked="" type="checkbox"/> Intranet <input checked="" type="checkbox"/> VPN <input type="checkbox"/> SSHA Network <input checked="" type="checkbox"/> Others: <u>Mainframe</u>
DSS Tools	SAS, SPSS, ACCESS, EXCEL or any software capable of reading/processing "flat" non-delimited text files

SYSTEM REQUIREMENTS

Licensing	No specific licence. KMRB can only provide the files to MOHLTC/MHP/PHU users. Pending the passing of LHIN legislation, LHIN analysts may have access in 2006/2007.

Overview	
Description	<p>The Ontario Ministry of Health and Long-Term Care (MOHLTC) offers a financial assistance program for children whose teeth are in need of emergency or essential care through the Children In Need of Treatment (CINOT) The program is managed and administered by the province’s Public Health Units. The program provides treatment to children from birth to Grade Eight who have an urgent need and whose parents declare financial hardship. The program is funded by the MOHLTC and administered by the Public Health Units of Ontario. Demographic and treatment data for each claim are entered into the Ministry’s CINOT Database.</p> <p>To be eligible for the CINOT program a child must: be in elementary school or 0-13 years of age; be identified as having an urgent dental condition; have no dental insurance or any other coverage and declare that the cost of treatment would create a financial hardship. All children must be screened by a Public Health Hygienist before they can be admitted to the program. The majority of children are identified through the Public Health Unit’s targeted school dental screening, referral and follow-up activities. Teachers and parents may also request that the Health Unit screen a child if they believe the child would qualify for CINOT. Children who are accepted into the CINOT program may choose any dentist in the community. Only basic dental treatment (e.g. x-rays, fillings and extractions) is covered under the program. All dentists receive a copy of the services covered by CINOT. Some more complex services require prior authorization from the Health Unit before they can be done. Preventive services are usually provided through the Health Unit free of charge. When a dentist accepts a CINOT covered patient, he/she is not permitted to bill the parent or guardian for covered services. However, if the parent or guardian consents to additional services not covered by the CINOT program, the dentist will bill them directly.</p>

Overview

Description

The Accident Database System (ADS) includes every reportable motor vehicle collision (including farm tractors and snowmobiles) that occurs in the province of Ontario. ADS records information on the basic components of each collision (e.g. road conditions, location), the vehicles involved, the drivers involved, and the persons involved if the collision resulted in at least one injury or fatality. This data is of interest to both public and private sector agencies for education, research, and reference purposes. The data provides public health agencies with useful information for injury prevention programs, such as seat belt and alcohol use by drivers and passengers. The data can be used by researchers to identify cases for case-control studies and, when linked to traffic volume data, can be used to identify areas of high collision incidence.

For each reportable collision that occurs in Ontario, a record is created in the Ministry of Transportation (MTO) mainframe database. This record is based on the information recorded by the attending police officer on the Motor Vehicle Accident Report (Accident Reporting Form - Adobe Acrobat Reader Required) or reported directly by drivers involved in motor vehicle collisions through the Self Reporting Centers located in major Ontario municipalities (Property Damage Only collisions). ADS is updated with any new information related to the collision, or drivers involved (e.g., fatality data from the Chief Coroner's Office). Often, the updates involve a change in the health status of a person involved in the collision (e.g. death following admission to hospital).

Each record in the MTO database consists of three basic elements:

- **Basic collision information:** each record includes reportable motor vehicle collision and consists of information such as the collision location, time and date, road conditions, road characteristics, environmental conditions, events contributing to the collision occurrence, etc.
- **Driver/vehicle information:** each record includes driver/vehicle involved in motor vehicle collision and consists of information about driver's age, driver's gender, driver's condition, driver action, vehicle type, vehicle speed, vehicle maneuver, vehicle condition, province of vehicle registration, etc.

Involved person information: each record includes any person involved in fatal or injury collision, and consists of information related to the

	involved person age, gender, position in vehicle, severity of injury, or use of safety equipment.

Overview

Description	The Clinical Trial Management System is a multi-user information software system that assists hospitals with non-clinical management and financial tracking of cancer clinical trials. Main features include: <ul style="list-style-type: none"> • tracking of studies and study status • development of budgets • tracking study patients • tracking costs • tracking earned revenues • tracking payments received from study sponsors • tracking documents, such as Research Ethics Board submissions The database is segregated for each individual hospital, and no data is shared between or outside of the hospitals.

Overview	
Description	<p>The Active Physician Registry contains actively practicing physicians in Ontario. The Ontario Physician Human Resources Data Centre (OPHRDC) is the definitive source for information on physicians and postgraduate medical trainees in Ontario. Located at McMaster University, OPHRDC is a collaborative project of the College of Physicians and Surgeons of Ontario (CPSO), the Ontario Ministry of Health and Long-Term Care (MOHLTC), the Ontario Medical Association (OMA), and the Council of Ontario Faculties of Medicine (COFM). Funding is provided by the Ontario Ministry of Health and Long-Term Care. The contract to develop and operate the OPHRDC was awarded to the McMaster University Faculty of Health Sciences in 1992 and renewed in 2000.</p> <p>Since 1992, OPHRDC has maintained a registry of all licensed physicians practicing in Ontario, the Active Physician Registry. From this registry the OPHRDC produces numerous reports and analyses, including an annual report, Physicians in Ontario (PIO) and numerous special reports based on the annual PIO dataset.</p>

Overview

Description	<p>The Ontario Physician Human Resources Data Centre (OPHRDC) maintains on behalf of the Ontario Ministry of Health and Long-Term Care (MOHLTC) a database of medical staff appointments in all hospitals in Ontario. Subsequent to their annual renewal of staff appointments, each Ontario hospital provides to OPHRDC a listing which includes the name, specialty and type of appointment of each member of their medical staff. OPHRDC compiles this information and provides an annual report, Physician Hospital Appointments in Ontario, to the MOHLTC.</p> <p>Prior to 2002 this information was collected by MOHLTC staff. OPHRDC was awarded the contract to collect, maintain and develop the PHAL dataset beginning with the 2003 annual renewal. OPHRDC also has custody of 1992-2001 data collected by MOHLTC.</p> <p>Located at McMaster University, OPHRDC is a collaborative project of the College of Physicians and Surgeons of Ontario (CPSO), the Ontario Ministry of Health and Long-Term Care (MOHLTC), the Ontario Medical Association (OMA), and the Council of Ontario Faculties of Medicine (COFM). Funding is provided by the Ontario Ministry of Health and Long-Term Care.</p>

Overview

Description	<p>The Pediatric Oncology Group of Ontario Networked Information System (POGONIS) is a database and registry capturing standardized data on childhood cancer cases and service delivery in Ontario. Each of the five POGO centers across Ontario provides data on the children it cares for, and is able to use POGONIS to track its own statistics regarding patients and service output.</p> <p>The purpose of POGONIS is to monitor:</p> <ul style="list-style-type: none"> • The incidence and prevalence of childhood cancer • The demand for care • The nature and specifics of treatment and complications • Patient outcomes – specifically late effects, second malignancies and relapses • Long-term effects of childhood cancer and its treatment <p>Coupled with the knowledge capital represented within POGO's Board, staff, and standing committees, POGONIS is the cornerstone of expert advice and planning for the province. It is a unique source of reliable, validated data that is the basis for:</p> <ul style="list-style-type: none"> • Precise estimates of the incidence of, and trends in childhood cancer in Ontario • Analysis of demand for and delivery of care • Planning new programs and ensuring decisions about where to locate these are well informed • Provision of data for multiple research projects • Population-based research on the POGONIS data itself • Accurate projections of the number of children to be treated in the future • Forecasting of staff requirements • A clear understanding of where the children live in relation to where they are treated, in order to facilitate the strategic location of treatment facilities
--------------------	--

	<ul style="list-style-type: none"> A summary of key diagnostic and treatment information, the “<i>Passport to Health</i>”, issued to survivors by their treating hospitals. <p>POGONIS is the core oncology data set used by POGO partner hospitals and enables local data query of their own cases and activity. In 2003, the data fields were expanded to provide for the future tracking of late effects faced by survivors, and services provided in the POGO AfterCare clinics.</p>

USAGE CONSTRAINTS

Privacy Constraints	Data in cells containing less than 5 entries are not reported. Data for individual institutions is not reported without explicit permission. Access to the database requires application to the Database Administrator and approved by the Medical Director, Database Administrator and Executive Director. POGO was designated a 45.1 entity within the new Ontario Personal Health Information Protection Act (PHIPA) in November 2004 which permits POGO to collect use and disclose personal health information. POGO has in place a comprehensive Privacy, Confidentiality and Security Program. One key element of the program is POGO's statement of principles and policies that guide POGO's operations and informs others of POGO's practices. The principles and policies are reviewed and updated regularly. The principles and policies are set out in the document " <i>POGO'S Privacy Code</i> ". POGO anticipates review and approval by the Ontario Privacy Commissioner in the summer/fall of 2005 in order to fulfill its 45.1 purposes.

	POGO		Bruna DiMonte	(416) 592-1232	bdimonte@pogo.ca

ADDITIONAL NOTES

The POGONIS dataset focuses on the unique dimensions of care of the child with cancer--the malignancies of childhood and care given being distinct from cancer in adults. Its elements define the pediatric oncology population of Ontario and key aspects of its care/service delivery, facilitating planning and decision making for the tiered, integrated Ontario cancer control system.

POGONIS data constitutes the core, standardized data on pediatric oncology cases at participating hospitals. It includes a workload view – of Ontario residents, out of province and out of country patients diagnosed/treated in POGO hospitals. Each case entered has a unique POGO identifier, which under approved conditions, may be matched with identifiers held in contributing hospitals. Local and provincial data queries are enabled.

POGO is in the process of adding an AfterCare dataset to POGONIS, including long-term complications data on survivors of all ages. Aggregate financial, health HR data, surveys, and select community services information are routinely collected and separately held by POGO.

POGO's new status as a Section 45 (1) entity permits the organization to hold personal health identifiers, facilitating linkage with administrative databases for planning purposes. POGO is currently working with the Privacy Commissioner to ensure policies, procedures and the necessary levels of security are in place to realize this designation.

Overview

Description	<p>The Niday Perinatal Database is a provincial & regional, Internet-based, real-time surveillance system that collects Ontario birth data, including: risk factors, interventions, health services, and newborn health outcomes.</p> <p>The Niday Perinatal Database is the most timely and comprehensive source of perinatal information for hospital and home births in Ontario, currently capturing over 90% of all births in the province. The database is in use in over 70 hospitals and midwifery groups across Ontario, and more are joining to system regularly. Most remaining hospital sites are expected to participate in the system by the end of FY 2005/06.</p> <p>A neonatal module has been recently added to the Niday Database to capture additional information on babies that require NICU care. Additional modules, such as a neonatal follow-up, pediatric care, and an antenatal module, are also being explored.</p> <p>The Niday Perinatal Database (formerly known as the Eastern and Southeastern Ontario Perinatal Database) is developed, managed and maintained by the Perinatal Partnership Program of Eastern and Southeastern Ontario (PPESO). It was first implemented in January 1997 in the Eastern and Southeastern Ontario region. The database was renamed after Patricia Niday (a driving force behind the initial development of the database), the former Executive Director of PPESO, when she retired in 2001.</p> <p>Since its initial inception, the database has undergone substantial enhancements. Beginning January 1, 2001, the database was enhanced from a stand-alone computer program, to the web-based CritiCall Ontario platform. Hospitals now enter data directly into the database accessed through an Internet-based screen (hosted by CritiCall Ontario) and can generate reports independently. The perinatal database has also been enhanced to provide more detailed perinatal indicators as well as the addition of a neonatal module. Adoption of the database in Ontario has also expanded considerably over the past 2 years.</p> <p>Partnerships have been formed with the Public Health Units throughout Ontario so they may access this information for health and program planning, identification of trends and education needs. The real time data makes the analysis more reflective of the need as it provides a current examination of perinatal and neonatal health and care for many health systems partners. To date the information in the database has been used not only by each hospital, but at an aggregate level in network systems, Public Health Units, Early Years programs, and other perinatal</p>

Overview	
Description	<p>The <u>Health Planning System (HELPS)</u> is a statistical analysis data management program used to identify disease and condition trends in Ontario. It is a collection of data files originating from outside the Ministry of Health and Long-Term Care (MOHLTC), from federal and provincial governments and other external agencies. The system is a series of flat files downloadable into SPSS format for use by Ontario's Public Health Units and selected ministry staff. The vital statistic component is downloaded by the Knowledge Management and Reporting Branch and converted into SPSS and sent on compact discs to each of the Public Health Units. This is an annual process.</p> <p>Cancer incidence information is obtained directly from the Cancer Care Ontario (CCO). Previously the CCO provided the data elements to the MOHLTC but presently CCO is promoting direct contact with them for data requests. The Canadian Community Health Survey information is provided directly to the Public Health Units from the Provincial Health Planning Database (PHPDB) in SPSS format. Statistics Canada provides - Census / demographic summary tables and population estimates (age/sex) to the PHPDB. These summary tables are edited and checked by MOHLTC and sent to the Public Health Units. Information related to congenital anomalies is obtained from Statistics Canada in a summary table formatted in Excel. Abortion summary tables are provided through the Knowledge Management and Reporting Branch. The abortion information is derived from CIHI hospitals data and OHIP claims data from clinics.</p> <p>In addition, the HELPS administrators provide resource support to the data users in the form of documentation, `SPSS licensing and training. They also publish articles about health data, collection methods and relevant definitions.</p>

Overview

Description

The Immunization Records Information System (IRIS) was developed for public health departments in 1993 to maintain the immunization and tuberculin testing records of all school-aged children within their jurisdictions. Immunization levels are calculated for each of the six diseases (diphtheria, tetanus, polio, measles, mumps and rubella) for which immunization is required under the *Immunization of School Pupils Act (1982)*.

Under the *Immunization of School Pupils Amendment Act, 1984*, parents are directly responsible for the immunization status of their children. Parents are obligated to report any vaccinations their children receive in a doctor's office. This information is collected by the Public Health Units of the province and entered into IRIS. At the moment, measles, mumps, rubella, diphtheria, tetanus, and polio vaccines are the only mandatory vaccines required under the Act. In addition to mandatory vaccines, IRIS typically records all childhood vaccines, especially those that are publicly funded, including Hepatitis B, Varicella, Haemophilus, Pneumococcal and Meningococcal Conjugate C. Starting in 2004 chickenpox and meningitis will be included. This information belongs to the Public Health Units and the units are responsible for producing reports on the immunization status of their areas.

The Ministry of Health and Long-Term Care (MOHLTC) is the facilitator for data transfer and provides the architecture for the application. There is a two-way exchange of data between the Ministry's central immunization database and the individual Public Health Units' databases, to ensure information is correct and available when a child moves between public health units. The system information is aggregated at a high level to be used by policy analysts at the MOHLTC to support the annual business planning. Occasionally, the information is shared with outside health organizations and is published in medical journals and reports.

IR_TB	Client Mantoux (TB) test results	Health Card Number	Clinical records	Linked to IR_H	Linked to IR_H	Earliest Data: 1980 Latest Data: Current Update Freq.: Ongoing Mandatory? Yes

USAGE CONSTRAINTS

Privacy Constraints	Immunization information is gathered under the terms of the <i>Immunization of School Pupils Act</i> and the <i>HIPPA</i> . IRIS contains personal medical information covered under HIPPA.
Restricted Copy Rules	MOHLTC maintains a partial data copy to facilitate forwarding information between Public Health Units where required.
Derived Works Limitations	<p>Low immunization coverage levels may appear in some years, mainly because children are at the age where their booster for a particular vaccine becomes overdue. In most cases, the child has been appropriately immunized, but due to the reporting lag in the IRIS model, the information may not be available for analysis. IRIS data is entered retrospectively when a child enters the school system or daycare. Early childhood vaccine information is not available in real time.</p> <p>Hemophilic influenza type b (Hib) immunization levels data for children under five years of age may be incomplete because it is not a mandatory vaccine. For those children attending day care/nursery schools, the <i>Day Nurseries Act</i> requires the operator to collect information on childhood immunization. This is the only method of receiving Hib records and, therefore, the health unit would not have information on those children not attending day care/nurseries. Although Hib is a regular part of a child's immunization schedule, concrete collection methods for this information (and other non-mandatory vaccines) are not in place.</p>

Overview

Description	<p>The Reportable Disease Information System (RDIS) is used to assist Public Health Units with the case management, reporting and surveillance of reportable diseases within their jurisdiction. The Public Health Units must report all confirmed cases of reportable and communicable disease to the Public Health Branch of the Ontario Ministry of Health and Long-Term Care (MOHLTC). Under the Health Protection and Promotion Act (HPPA) in 1983, mandatory “reportable diseases” are identified and listed. This information is monitored by MOHLTC professional staff. The Public Health Units produce weekly reports for disease control specialists and consultants. Extracts of this information are published yearly by PHD as CD Summary Reports. Professional staff at the Ministry uses this information for planning and public health administration.</p> <p>The RDIS is being replaced by iPHIS (integrated Public Health Information System). Both RDIS and iPHIS will be in place for a period of time until iPHIS is fully implemented at all Ontario Public Health Units by the end of 2005. iPHIS captures the same data as RDIS. In addition to enhanced range and quality of data, iPHIS will provide full case management and outbreak management capabilities not currently available through RDIS.</p>

USAGE CONSTRAINTS

Privacy Constraints	Data are collected under the auspices of HIPPA. HIPPA and PHIPPA allow for the appropriate use, as both the Ministry and Public Health Units are custodians. RDIS contains personal health information covered by HIPPA
Restricted Copy Rules	The MOHLTC hosted RDIS reporting contains only anonymous data.
Derived Works Limitations	The RDIS central reporting receives data through periodic (usually weekly) transmissions from the Public Health Units. This means outbreak and disease trend data is not available in real time.

Overview	
Description	The Canadian Joint Replacement Registry (CJRR) captures information on hip and knee joint replacements performed in Canada. It follows joint replacement patients over time to monitor their revision rates and outcomes. Data is collected with patient consent at the time they receive joint replacements. Data is submitted voluntarily by participating surgeons, facilities and provincial registries (where established). This database contains data on hip and knee replacement patients and includes demographics, administrative and clinical information, type of replacement, surgical approach, fixation modes and implant types.

Overview	
Description	<p>The Canadian Management Information System Database (CMDB) contains financial and statistical information about hospitals. Formerly known as the Annual Hospital Survey, the CMDB contains financial and statistical information primarily on hospitals with limited data on regional health authorities across Canada. It is part of CIHI's Health Spending Databases. In the provinces/territories where a central database is maintained, the database is populated through a data transfer from the Ministry of Health and Long-Term Care. In other provinces, individual facilities and regional health authorities are surveyed. CIHI produces a document on the Technical Specifications to follow in submitting CMDB data to CIHI. The database contains financial data, such as expenditures by functional area. It also includes the number of earned hours, outpatient visits, and beds staffed and in operation. This is based on the account structure contained in the Guidelines for Management Information Systems in Canadian Health Service Organizations (MIS Guidelines).</p> <p>The MIS Guidelines are the national standards for gathering and processing data, and reporting financial and statistical data on the day-to-day operations of a health service organization. They also provide a framework for integrating clinical, financial and statistical data when service recipient costing is done.</p>

ADDITIONAL NOTES

CIHI did not begin to collect data using the MIS Guidelines as the standard until 1995-1996. Data from 1932-1933 to 1993-1994 was collected by Statistics Canada through the Annual Hospital Survey using the Canadian Hospital Accounting Manual (CHAM) as it's data standard and is available only from Statistics Canada.

Overview	
Description	The Canadian Organ Replacement Register (CORR) records, analyzes and reports on the activity and outcomes of vital organ transplantation and renal dialysis activities in Canada. Data is collected from participating dialysis centres, transplant centres and organ procurement organizations in Canada. Data includes patient-specific treatment and outcome data on chronic kidney failure patients receiving renal replacement therapy in Canada. It also includes patient demographics, risk factors, follow-ups such as graft failures, organ transplantation data, such as number, type and outcome of vital organ transplants, number of living and deceased organ donors and number of patients on the transplant waiting list.

Overview	
Description	<p>National System The Continuing Care Reporting System (CCRS) contains demographic, administrative and clinical data for residents in facility-based continuing care in Canada.</p> <p>The CCRS was developed from the Ontario Chronic Care Patient System (OCCPS), which was based on Ontario complex continuing care facilities' data only. Nursing staff or other health providers conduct assessments of individuals in designated beds, whether in free-standing chronic or long-term care facilities, or in hospitals. The data is collected using the Resident Assessment Instrument (RAI) Minimum Data Set, (MDS 2.0), © interRAI 1997, 1999, modified by CIHI for CCRS use.</p> <p>Ontario Complex Continuing Care facilities are mandated to submit MDS 2.0 data to the CCRS. The rest of this description applies to Ontario only.</p>
Info Holding Owner	<p>National: Canadian Institute for Health Information (CIHI) Ontario: Copy of Ontario data is held by Knowledge Management and Reporting Branch, IPP</p>
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input checked="" type="checkbox"/> Restricted Copy <input type="checkbox"/> Does not own a copy <input type="checkbox"/> Not Applicable Copy Owner: Knowledge Management & Reporting Branch, IPP
Target Audience	CIHI, provincial and territorial ministries of health, decision and policy-makers, Health Canada, Statistics Canada and health care researchers, local/provincial health care administrators.

Overview	
Description	<p>National System The Discharge Abstract Database (DAD) contains demographic, administrative and clinical data for hospital discharges: acute inpatient, day surgery, chronic, and rehabilitation. CIHI receives data directly from participating hospitals in every province and territory or from the provincial Ministry of Health in Manitoba and Alberta. Quebec does not participate to the DAD.</p> <p>The DAD is a core database at CIHI. Information collected in the DAD is used in the creation of parts of other databases including the Hospital Morbidity Database (HMDB), the Hospital Mental Health Database (HMHDB), the National Trauma Registry (NTR), the Ontario Trauma Registry (OTR) and the Therapeutic Abortions Database (TADB).</p> <p>Ontario DAD in Ontario now contains only Acute Care. All other care types are now reported in their own systems. The rest of this description applies to Ontario only.</p>
Info Holding Owner	<p>National: Ontario data is processed by Canadian Institute for Health Information (CIHI) and stored at CIHI for inclusion in national reports Ontario: Copy of Ontario data is held by Knowledge Management and Reporting Branch, IPP</p>

CONTACTS

Support/Questions	Support Organization	Title	Name	Phone #	E-Mail
For Ontario Data:	Knowledge Management & Reporting Branch	Data Information Access Analyst	Ms. Mahroo Afrashteh	(416) 327-7724	Mahroo.Afrashteh@moh.gov.on.ca
For other provinces' data:	Canadian Institute for Health Information			(416) 481-2002	dad@cihi.ca

ADDITIONAL NOTES**National:**

File layout, code structure and facility list documents are available from CIHI. Available are the following: *DAD Abstracting Manual*, *CMG/Plx Directory.DPG* and *the DAD RIW* and *ELOS*. All clients submitting data to the Discharge Abstract Database receive monthly and quarterly electronic Hospital Specific Reports (eHSR) and are part of the eCHAP (electronic Comparison of Hospital Activity Program) for acute care and day surgery data.

Ontario:

Ontario clients should contact Knowledge Management & Reporting Branch for documentation/questions/access to data.

Overview	
Description	<p>The Health Personnel Database (HPDB) contains information on the number of health care professionals in Canada, for selected healthcare occupations, by province/territory. It is part of the CIHI Health Human Resources Databases.</p> <p>The HPDB contains aggregate, supply-based information on the number of health care personnel in Canada, for selected occupations, by province/territory and year. Except in instances where data is collected at the national level (i.e. SMDB, RNDB, LPNDB and RPNDB at CIHI) the Health Personnel Database (HPDB) utilizes data from associations (membership is voluntary) and regulatory/ licensing authorities (membership is a condition of employment) across Canada as the primary source of data. It includes the number of members of health professional associations by province/territory and year. Where possible, data on registration status and gender are provided from the appropriate regulatory or licensing authority. Counts of graduates of health professional educational/training programs are provided for selected health professions.</p>

Overview	
Description	The Hospital Morbidity Database (HMDB) is a national data holding that captures administrative, clinical and demographic information on hospital inpatient events. It provides national discharge statistics from Canadian health care facilities by diagnoses and procedures. Discharge data are received from acute care facilities and select chronic care and rehabilitation facilities across Canada. Discharge data from psychiatric facilities, as well as day procedures (e.g. day surgeries) and emergency department visits, are not captured in this database.
Info Holding Owner	Canadian Institute for Health Information (CIHI)
MOHLTC Owns:	<input type="checkbox"/> Unrestricted Copy <input type="checkbox"/> Restricted Copy <input checked="" type="checkbox"/> Does not own a copy <input type="checkbox"/> Not Applicable Copy Owner:

Data Sources	<input checked="" type="checkbox"/> Primary <input type="checkbox"/> Secondary Sources: The HMDB is populated by a subset of Discharge Abstract Database (DAD) data for those provinces and territories that submit discharge statistics to the DAD. The HMDB is unique in that it appends data from non-DAD jurisdictions to be nationally comprehensive. These data files are submitted to CIHI by the appropriate provincial or territorial ministry of health.
Population Groups	
Data Granularity	<input type="checkbox"/> Personal <input checked="" type="checkbox"/> Anonymous <input type="checkbox"/> Pseudonymous <input type="checkbox"/> Aggregated Aggregation Levels:

Overview	
Description	<p>The National Health Expenditure Database (NHEX) is part of the CIHI Health Spending Databases. It provides an overview of all health expenditures in Canada, by spending category and source of funding. Data is extracted from diverse public documents. It includes national and provincial and territorial public accounts and other financial reports. Other sources included are private insurance companies, AC Nielsen Canada and Statistics Canada.</p> <p>The database contains expenditure data on over 40 categories, 5 sources of finance (federal, provincial, territorial, municipal, workers' compensation boards, other social security funds and the private sector), by province and territory.</p>

Overview	
Description	The National Prescription Drug Utilization Information System (NPDUIS) is pan-Canadian information system housing information related to drug benefit formularies, drug claims, drug plans and population statistics. The NPDUIS will provide accurate and timely national prescription drug utilization information. The database is under development and a progressive rollout will be based on readiness of the modules and the data providers. This first phase of NPDUIS will collect data from the public drug plans across Canada.

Overview	
Description	<p>National System: The National Rehabilitation Reporting System (NRS) contains client data collected from participating adult inpatient rehabilitation facilities and programs across Canada. Data are collected at time of admission and discharge by service providers in participating facilities. There is also an optional post-discharge follow-up data collection process. Participants in the NRS must sign an end user license agreement with CIHI. NRS data elements are used to calculate a variety of indicators. Participation in all other provinces is voluntary.</p> <p>The data elements represented are in the following categories: socio-demographic, administrative (e.g. referral, admission and discharge), health characteristics, activities and participation and interventions. The activities and participation data are collected using the 18-item Functional Independence Measure (FIM™) instrument and an additional assessment measure developed at CIHI that provides additional detailed information on cognitive functioning abilities of rehabilitation clients.</p> <p>Ontario: Ontario has mandated the collection and submission of NRS data in all designated adult rehabilitation beds since Oct 2002.</p>
Info Holding Owner	<p>National: Ontario data is processed by Canadian Institute for Health Information (CIHI) and stored at CIHI for inclusion in national reports</p> <p>Ontario Copy of Ontario data is held by Knowledge Management and Reporting Branch, IPP</p>

Overview	
Description	The National Trauma Registry (NTR) contains demographic, diagnostic and procedural information on all admissions to acute care hospitals in Canada due to injury. Data is abstracted from the Hospital Morbidity database, together with data from provincial trauma registries or trauma centres in Canada. The NTR identifies, describes and quantifies trauma (injuries) in Canada. The NTR has three data sets: <ul style="list-style-type: none"> • The Minimum Data Set (MDS) includes demographic, diagnostic and procedural information on all admissions to acute care hospitals in Canada due to injury. • The Comprehensive Data Set (CDS) contains data on patients hospitalized with major trauma. • The Death Data Set (DDS), which is currently under development, and will contain data on all deaths in Canada due to injury.

Overview	
Description	<p>The OECD (Organization for Economic Co-operation and Development) Health Database contains information on health care spending, health care services and health status among member countries of the OECD. CIHI and Statistics Canada maintain the Canadian segment of the OECD Health Database.</p> <p>The purpose of the OECD Health Database (Canadian Segment) is to collect and process a consistent series of internationally comparable health care data for the 1200 variables contained in the OECD health database. This facilitates international comparative reporting, supports policy planning and decision making at the provincial, territorial and national levels and supports related analysis and research by other organizations.</p> <p>The OECD health database is divided into 10 parts: Health Status, Health Care Resources, Health Care Utilization, Expenditure on Health, Financing and Remuneration, Social Protection, Pharmaceutical market, Non-medical Determinants of Health, Demographic References and Economic References. The OECD Health Database (Canadian Segment) is part of the CIHI's Health Spending Databases.</p>

Overview	
Description	The Registered Nurses Database (RNDB) is part of the CIHI Health Human Resources Databases. It contains supply and distribution information for the registered nursing workforce in Canada from 1980 to the present. A data agreement governs the collection of RN data. Under the current agreement, each regulatory authority submits 20 data elements collected from each registered nurse on registration forms. The RNDB contains information about nurse demographics (e.g. age, gender, etc.), employment (e.g. active, abroad, etc.), school and year of graduation.

Overview

Description	<p>The Canadian Cancer Registry (CCR) is a dynamic database, maintained at Statistics Canada, of all Canadian residents alive or dead who have been diagnosed with cancer. The function of the Canadian Cancer Registry is to produce standardized and comparable cancer incidence data for each newly diagnosed primary site of cancer. The CCR is a patient-based system, in which are recorded the kind and number (incidence) of primary cancers diagnosed for each person over a number of years until death. The advantage of this system is that longitudinal data is available for each cancer patient. New primary cancers occurring for previous cancer patients are identified. The patient data is regularly linked to mortality data so that the date and cause of death of every cancer patient is eventually known.</p> <p>CCR is a collaborative effort between the thirteen Canadian provincial and territorial cancer registries and the Health Statistics Division of Statistics Canada, where the data are housed. Ultimate authority and responsibility for the degree of coverage and the quality of the data reside with the provinces and territories. Beginning with reference year 1992, information collected by the provincial and territorial cancer registries has been reported to the CCR. The data that comes into the CCR describes both, the individual with the cancer, and the characteristics of the cancer.</p> <p>The primary objective of the CCR is to provide a large database to study cancer patterns and trends and to monitor differences in cancer risks among different populations. Information about cancer incidence and survival in Canada is generated by the CCR. The information is used for descriptive and analytic epidemiological studies to: identify risk factors for the cancer; plan, monitor and evaluate a broad range of cancer control programs (e.g., screening); and, conduct research in health services and economics.</p>

ADDITIONAL NOTES

The CCR is comprised of administrative data. Each provincial and territorial cancer registry supplies data on cancer patients and tumours in a standard, pre-edited format, on diskette or CD-ROM. Each year, approximately 145,000 new cancer tumour records are loaded on the Canadian Cancer Registry (CCR) patient-oriented database which is housed and maintained at Statistics Canada. Subsequent changes to registrations due to errors or omissions are also transmitted to Statistics Canada, as the information becomes available. Cancer records are loaded on the CCR database and those failing edits that ensure the validity of each data field and to check the compatibility of different data elements within a record are rejected and returned to the province for verification or correction. Each provincial and territorial cancer registry has the ability to add, update, delete, and change the ownership (by province) of records. The CCR can be updated with new records or changes to previous records, as part of regular submissions from the registries to Statistics Canada. The following three software modules perform the tasks of building and maintaining the data in the CCR database: Core Edit, Internal Record Linkage, and Death Clearance.

Glossary of Terms

Definitions of Terms Used to Categorize Information Holdings in the Cross-Reference Table
(Refining the terms is under development)

Term	Definition	Definition Source
Data Category		
Clinical	A method of describing medical work relating to the examination and treatment of ill people.	Controlled Clinical Vocabularies, CIHI – Partnership for Health Informatics/ Telematics (Adapted)
Demographics	Information regarding name, address, age, gender, and role. It specifically refers to population size and density, distribution, vital statistics and socio-economic information.	The Health Information Framework, Version 1, CIHI
Financial	A framework of detailed financial elements reflecting the scope of health care activity.	MOHLTC: Nursing Health Services, Research Unit
Health HR	Individuals who provide health care and health services to the public. This includes a wide variety of occupations ranging from physicians and nurses to allied health professionals such as medical laboratory technicians, pharmacists, psychologists and physiotherapists.	Health Canada: Health Care Renewal Website
Reference	An information holding, developed internally to be used as a reference or resource file to enable analysis and interpretation of information provided by other files. (At MOHLTC this includes the Master Numbering System File, Post Code Conversion Files and other reference information holdings.)	Developed and adapted internally
Surveys	A method of collecting data by asking a representative or a large group of people their opinions or behaviour.	Cambridge Advanced Dictionary (Adapted)
Services		
Acute Care	Care for patients who require immediate intervention and constant medical attention, equipment and personnel.	Health Canada, Health Care Network, Glossary of Terms
Community Care	All client-related health activities that occur in settings other than acute care hospitals and cancer clinics. These settings include community family or children's treatment centres or clinics, day care facilities, physician or dentist offices, retail pharmacies, home care, continuing or long-term care, palliative care, mental health facilities, schools, worker's compensation facilities and industrial workplaces. (It includes CCAC's, DHCs, seniors' care, public health laboratories and public health units.)	CIHI - Partnership for Health Informatics/Telematics
Complex Continuing Care (Chronic Care)	Services for patients requiring 24-hour nursing care and complex medical and diagnostic services. Patients may have physical, cognitive or behavioural conditions that limit their ability to live independently in the community. Marked by long duration, by frequent recurrence over a long time, and often by slowly progressing seriousness or not acute. The term "Chronic Care" is also used to refer to "Complex Continuing Care."	Health Canada, Health Care Network - Toxics Management Glossary (Adapted)
Emergency Care	Care for patients with severe or life-threatening conditions that require immediate medical attention.	Health Canada, Health Care Network, Glossary of Terms
Home Care	An array of services which enables clients incapacitated in whole or in part, to live at home, often with the effect of preventing, delaying, or substituting for long term care or acute care alternatives.	Federal/Provincial Working Group on Home Care

Term	Definition	Definition Source
Long-Term Care	The co-ordination of community care services provided by multi-service agencies (homemaking, personal, professional and community) that support and promote a continuum of health and social services (at home or in a care facility) together with those services offered by hospitals, long-term care facilities, mental health services, health care professionals and social service agencies.	Long-Term Care Act (Adapted)
Mental Health/Addictions	Mental health services comprise a mix of health, social, vocational, recreational, volunteer, occupational therapy, and educational services, as well as housing and income support. They include services ranging from mental health promotion and the prevention of mental health problems to the treatment of acute psychiatric disorders and the support and rehabilitation of persons with severe and persistent psychiatric disorders and disabilities.	Health Canada, Public Health Agency, Mental Health Website
Palliative Care	Coordinated support for individuals and families who are living with a life-threatening illness, usually at an advanced stage. It focuses on physical, psychological, social, cultural, emotional and spiritual needs of the ill person and his or her family. Palliative care services are delivered in various types of facilities. The term “End-of Life Care” is also used to refer to “Palliative Care”.	Health Canada: Palliative Care Website
Primary Care	Comprehensive healthcare services provided by an individual’s first level of contact with the health system. Services are provided through an interdisciplinary team of healthcare practitioners focusing on access, coordination and quality of care.	MOHLTC Website (Adapted)
Rehabilitation	Rehabilitation services include recovery from multiple traumatic injuries, organ transplants, amputations, cardiovascular surgery, strokes, and complex neurological and orthopaedic conditions. They provide time-limited, multidisciplinary rehabilitation programs to clients of the Workplace Safety and Insurance Board, extended health and auto insurance companies. A wide variety of community and complementary health services are included, such as massage, acupuncture, chiropody and chiropractic clinics.	Health Canada, Health Care Network, Glossary of Terms
Wait List Time Related		
Cancer Services	The delivery of cancer programs and services providing Ontario residents with access to cancer services regardless of where they live. These services include screening for early detection, access to drug treatments and evidence-based care guidelines for cancer care providers.	Cancer Care Ontario Website (Adapted)
Cardiac Services	The delivery of services and programs for the diagnosis, treatment and rehabilitation of heart related diseases.	Cardiac Care Network Website (Adapted)
Cataract Surgery	Surgery to remove cataracts (cloudy or opaque areas in the lens of the eye) and replace it with an artificial lens to restore clear vision.	Developed and adapted internally
Hip/Knee Joint Replacement	Hip and knee (unilateral or bilateral) replacement surgery performed on patients in acute care hospitals.	CIHI
MRI/CT Scan	Non-invasive procedures that use magnets and radio waves to produce a picture of the inside of the body.	Dorland’s Medical Dictionary
Age Groups		
Children	Ages 0-11	Statistics Canada
Youth	Ages 12-17	Statistics Canada

Term	Definition	Definition Source
Adult	Ages 18-64	Statistics Canada
Seniors	Ages 65+	Statistics Canada
Other Topics		
Diabetes Services	Services for patients diagnosed with diabetes. Diabetes is defined as “a condition in which the body either cannot produce insulin or cannot effectively use the insulin it produces.”	Canadian Diabetes Association's Diabetes Dictionary (Health Canada Website)
Morbidity	Illness from a particular disease.	Health Canada, Health Care Network, Glossary of Terms
Mortality	Death from a particular disease.	Health Canada, Health Care Network, Glossary of Terms
Osteoporosis	A condition characterized by low bone mass and deterioration of bone tissue. This leads to increased bone fragility and risk of fracture, particularly of the hip, spine and wrist.	Osteoporosis Society of Canada Website
Paediatrics	A branch of medicine that deals with the medical care of infants and children.	MedTerms.com Medical Dictionary
Patient Safety	The avoidance, prevention, and amelioration of adverse outcomes or injuries stemming from the processes of health care. These events include "errors," "deviations," and "accidents."	National Patient Safety Foundation
Prescription Drugs	Authorized use of "any substance or mixture of substances manufactured or for the diagnosis, treatment, mitigation or prevention of disease, disorder or abnormal physical state.	Food and Drugs Act (Federal); Health Canada
Trauma/Injuries	Injuries reported resulting from the transfer of energy and defined by specific trauma related External Cause Codes. (e.g. - motor vehicle collisions, pedal cycling, falls, suicide and self-inflicted injuries, fire and drowning)	CIHI - Ontario Trauma Registry
Women's Health	An inclusive view of women's health that emphasizes social, physical and personal resources.	Ontario Women's Health Network Website

Note: The following terms/taxonomies must be further refined, from authoritative sources. The present collection of terms (and organizational structure) arises from internal documents (e.g. LHINs information requirements) and internal feedback.)
