I. Introduction to the Update

This report presents population projections for Ontario and each of its 49 Census Divisions from the base year of 2005 to 2031. These population projections were prepared by the Ontario Ministry of Finance in Winter 2006 as an update to the 2004-2031 Ontario Ministry of Finance population projections published in Winter 2005. The latter were the first projections following the 2001 Census and can be referenced on the Ministry of Finance Web site.

The Ministry of Finance has updated its population projections in order to provide interested users with projections that track in the short term the most recent trends in components of population growth as well as the latest annual population estimates available from Statistics Canada.

Since the 2004-based population projections were published by Ministry of Finance in Winter 2005, previously released Statistics Canada population estimates have been revised and additional data have been made available. Taking account of these changes in an update ensures that the projections remain the most up-to-date and relevant resource possible.

This report presents a summary of the updated projection results. It also discusses the updated base year (2005) and minor changes to the assumptions for each of the components of population growth at the Ontario and Census Division levels.

This report should be used in conjunction with the *Ontario Population Projections, 2004-2031* report which provides an in-depth account of the Ministry of Finance projections methodology and long-term trends in components of population growth.

The updated population projections move the base year forward by one year. They use as the base population the preliminary July 1, 2005 postcensal population estimates released by Statistics Canada in September 2005 for Ontario and in December 2005 for Census Divisions. For Ontario, this base is 12.54 million. In addition, minor changes to assumptions were made to keep short-term levels and rates in the components of population growth in line with recent trends. The end point of the projections remains July 1, 2031.

It should be noted that the long-term assumptions and methodology underlying the updated population projections remain largely unchanged from those used for the 2004-based projections. This means that the long-term trends and implications of the demographic outlook remain the same as those outlined in the *Ontario Population Projections, 2004-2031* report released in Winter 2005.

These population projections do not represent Ontario Government policy targets or desired population outcomes; nor do they incorporate explicit economic assumptions. The projections are developed to provide an outlook of population growth for Ontario and its 49 Census Divisions using a standard demographic methodology. The Ministry's demographic assumptions for growth reflect past trends in all streams of migration and the continuing evolution of long-term fertility and mortality patterns in each Census Division. Population is projected for each of the 49 Census Divisions and summed to an Ontario total.

The updated projections include three scenarios for Ontario. The medium or reference scenario is considered "most likely" to occur. The low- and high-growth scenarios provide a reasonable forecast range based on plausible changes in the components of growth. At the Census Division level, an updated medium-growth scenario is provided. This corresponds to the updated medium-growth scenario for Ontario.

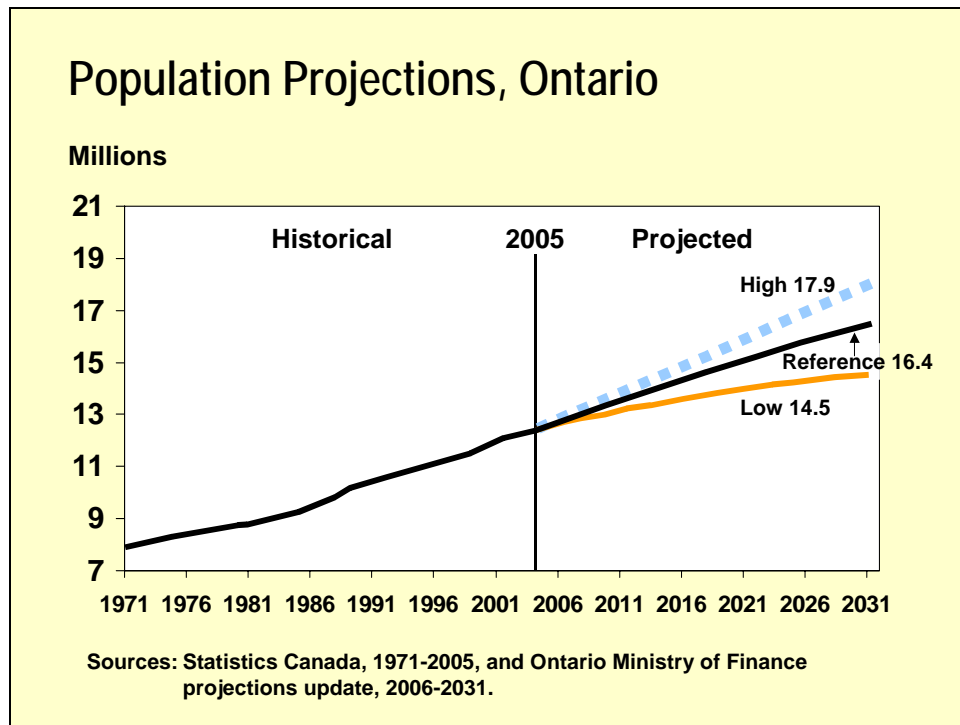

Section II provides the highlights of updated projection results, 2005-2031, at the Ontario and regional levels, including an analysis of the age structure and components of population growth. Section III provides a description of the assumptions underlying each scenario of the update.

The last part of this report is the Statistical Appendix of the most commonly used tables. This provides users with up-to-date, detailed projections data.

II. Highlights

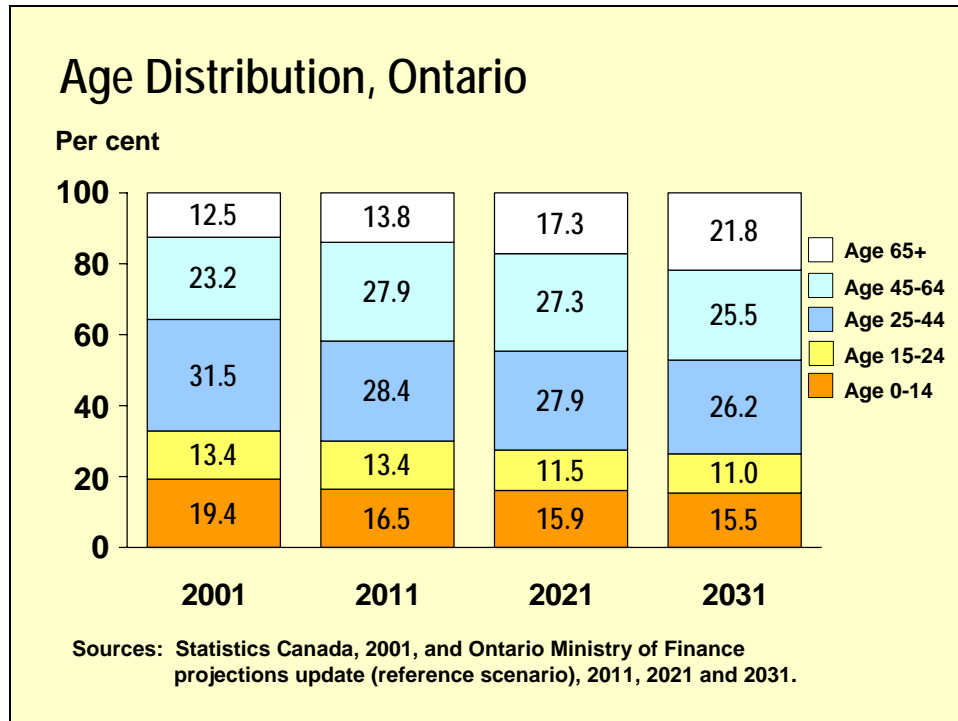

Highlights of the updated projections from 2005 to 2031 (reference scenario unless otherwise stated) are presented below. Note that the overall long-term trends in this update remain the same as those in the Winter 2005 projections.

- Ontario’s population is projected to experience fairly robust growth over the projection period, 2005-2031, under all three scenarios.
- The population of Ontario in the reference scenario is projected to grow by 30.7 per cent or 3.9 million, from an estimated 12.54 million on July 1, 2005 to 16.40 million on July 1, 2031. The population reaches 14.54 million under the low-growth scenario and 17.85 million under the high-growth scenario by 2031.

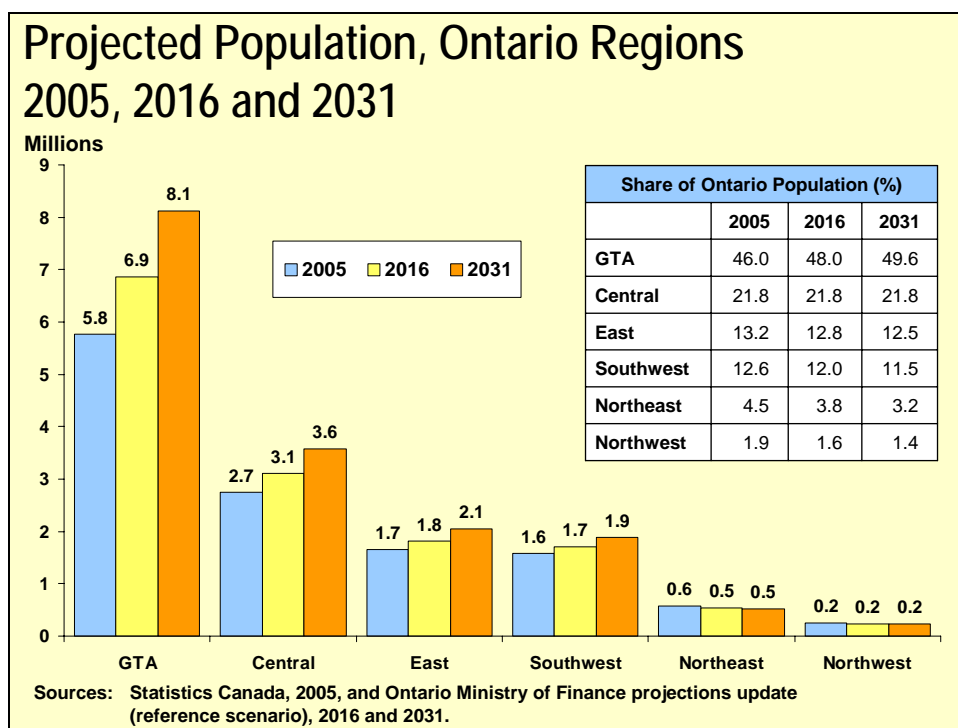

- Over the projection period, the annual rate of population growth declines, from 1.2 per cent in the first year of the projections to 0.7 per cent by the year 2030-31.
- The number of births, projected to be 131,000 in the first year, increases gradually to reach 157,000 in 2024-25. The increase in births is due to more women of childbearing age and to the slightly increasing fertility rates assumed in the reference scenario. The annual number of births starts to decline slowly in 2025-26 to reach 155,000 at the end of the projection period. The total fertility rate is assumed to increase slightly from 1.49 in 2005-06 to 1.53 by 2011 and to remain constant for the rest of the projection period.

- The number of deaths continues to increase as baby boomers age. From 85,000 in the first projected year, the annual number of deaths reaches 135,000 by the end of the projection period.
- Over the first decade, when the number of births and deaths increases at about the same pace, natural increase remains roughly constant at about 47,000. Over the rest of the projection period, natural increase declines rapidly, as deaths rise faster than births, dropping to just under 20,000 by 2030-31. In the low-growth scenario, a pattern of natural decrease (more deaths than births) occurs starting in the year 2024-25. In the high-growth scenario, natural increase rises rapidly until 2022-23 and declines slowly thereafter.
- Over the projection period, net migration will account for 72 per cent of total population growth. Immigration is by far the largest component of net migration.
- The median age of Ontario's population will rise to 43 years in 2031 from 38 years in 2005. The median age for women climbs from 39 to 44 years, and the median age for men increases from 37 to 42 years.
- The population age 65 and over more than doubles from 1.6 million or 12.8 per cent of the population in 2005 to 3.6 million or 22 per cent in 2031. The population age 75 and over will more than double as well, increasing from 753,000 or 6 per cent of the population in 2005 to 1.6 million or 10 per cent in 2031. The growth in seniors' share of the population will accelerate after 2011 as baby boomers begin to turn age 65. This same cohort will begin to reach age 75 a decade later, in 2021.
- The number of children under age 15 rises by only 261,000 over the projection period, from 2.3 million to 2.5 million, while their share of the population falls from 18.2 per cent in 2005 to 15.5 per cent in 2031.
- The core working-age population, ages 15-64, is projected to increase by 19 per cent, from 8.7 million in 2005 to 10.3 million by 2031. Within this age group, the most rapid increase is among those over age 45. The share of the core working age population will rise gradually from 69 per cent in 2005 to peak at 69.7 per cent in 2011, after which it will fall slowly to 62.7 per cent by 2031.
- The overall dependency ratio, the ratio of the 0-14 and the 65+ age groups to the 15-64 age group, will continue its decline until 2011, falling gradually from 45 "dependants" for every 100 working-age individuals in 2005 to 44 "dependants" in 2011. The favourable pattern of low dependency ratios will begin to change after 2011 with the arrival of large cohorts of baby boomers in the group age 65 and over. The dependency ratio will climb to 59 "dependants" by the year 2031.

- Not all regions of Ontario are projected to experience the same rate of population growth. The Greater Toronto Area (GTA), comprised of the City of Toronto and the regional municipalities of Durham, Halton, Peel and York, will be by far the fastest-growing region. It is projected to grow from 5.8 million in 2005 to 8.1 million in 2031. The GTA's share of total Ontario population will rise from 46 per cent in 2005 to 49.6 per cent in 2031, or almost one-half of Ontario's population. The GTA's share of net Ontario population growth to 2031 is projected to be 61.3 per cent. International migration is a very significant factor in the projected increase in the GTA's population and share.
- Within the GTA, Toronto's population is forecast to increase from 2.61 million in 2005 to 3.05 million in 2031. Growth in the other regions of the GTA (Durham, Halton, Peel and York) will add about 1.9 million people to the GTA. Within the GTA, only Toronto is projected to grow at a slower pace (17 per cent) than Ontario as a whole. In Durham, Halton, Peel and York, growth ranging from 47 to 79 per cent is projected over the 2005-2031 period.
- The population of Central Ontario is projected to grow from 2,740,000 in 2005 to 3,577,000 in 2031. The region's share will remain essentially unchanged at about 22 per cent. Many Census Divisions surrounding the GTA (Simcoe, Dufferin, Wellington and Waterloo) are projected to continue to experience above-average population growth.

- The population of Eastern Ontario is projected to grow from 1,653,000 to 2,054,000 in 2031. Ottawa is projected to grow fastest, above the provincial average, from 833,000 in 2005 to 1.1 million in 2031. The rest of Eastern Ontario will experience growth below the provincial average, with Lanark and Frontenac growing fastest.
- The population of Southwestern Ontario is projected to grow from 1,576,000 in 2005 to 1,887,000 in 2031. Growth rates within Southwestern Ontario will vary, with Essex growing fastest, at about the provincial average.
- The population of Northern Ontario is projected to decline by 7.4 per cent over the period, from 809,000 in 2005 to 749,000 in 2031. This projected decline reflects Northern Ontario’s recent migration trends and age structure. Among northern Census Divisions, Timiskaming and Cochrane are projected to experience the most population decline, and Parry Sound is projected to experience the most population growth.

III. Assumptions

This section explains the minor changes made to the assumptions for each of the components of population growth at the Ontario and Census Division levels. This discussion should be used in conjunction with the in-depth account of the methodology used by Ministry of Finance and the long-term trends in components of population growth provided in *Ontario Population Projections, 2004-2031*, also on the ministry's Web site.

The long-term assumptions and methodology underlying these updated population projections are largely unchanged. Minor changes to assumptions have been made to keep short-term levels and rates in the components of population growth in line with the most recent trends, based on revised or new population estimates from Statistics Canada and new vital statistics from the Ontario Registrar General.

Base Population

The updated population projections presented in this report use as the base population the preliminary July 1, 2005 postcensal population estimates released by Statistics Canada in September 2005 for Ontario and in December 2005 for Census Divisions. For Ontario, this base population is 12.54 million. This is 9,000 below the projected population of Ontario for that year in the Ministry of Finance projections released in Winter 2005.

As well as providing a new starting point, rebasing the projections to a new base year slightly alters the projected age structure and population growth in each Census Division. It also has an impact on many components of population growth that are projected by using age-specific rates, such as births, deaths and many of the migration streams.

Fertility

Since the 2004-based population projections were published by the Ontario Ministry of Finance in Winter 2005, new birth data by age of mother have become available for calendar year 2003 for Ontario and calendar years 2002 and 2003 for Census Divisions. These new data show a total fertility rate (TFR) of 1.496 in Ontario for 2003.

The 2002 and 2003 age-specific fertility rates generally follow previous trends, with the exception of rates for the 15 to 19 age group, which are declining at a slower pace. For this reason, minor adjustments were made to projected age-specific fertility rates in the 15 to 19 age group. This change did not significantly affect the projected total fertility rate for Ontario in this update; it is still projected to rise from 1.49 in 2005-06 to 1.53 by 2011-12 and remain

constant for the rest of the projection period in the reference scenario. For the low- and high-growth scenarios, the assumptions remain a steady decline or rise to TFRs of 1.3 and 1.75 respectively.

At the Census Division level, these new data were the basis for updating the Census Division-to-Ontario ratios used to project the evolution of the age pattern of fertility at the sub-provincial level. These ratios are now based on the 2001 to 2003 period.

Mortality

Revised population estimates by Statistics Canada for 2003-04 presented a higher number of deaths in Ontario than was previously assumed.

In the updated population projections, short-term mortality assumptions reflect this change in the recent level of mortality. The long-term assumptions remain unchanged. The life expectancies at birth for 2031 remain at 82.6 years for males and 85.0 years for females.

Similarly, for both low- and high-growth scenarios, the mortality assumptions are adjusted in the short-term but remain unchanged for the long-term. In the low-growth scenario, life expectancy increases gradually from its recent levels to reach 80.9 years for males and 83.6 years for females by 2031. In the high-growth scenario, life expectancy reaches 84.5 and 86.3 years for males and females, respectively.

Life Expectancy, Ontario							
	1976	1986	1996	2006	2016	2026	2031
Male							
At Birth	70.8	73.8	75.9	78.3	80.2	81.8	82.6
At Age 40	33.7	35.8	37.6	39.6	41.2	42.6	43.1
At Age 65	13.9	15.0	16.1	17.4	18.5	19.4	19.8
Female							
At Birth	78.0	80.0	81.3	82.6	83.6	84.5	85.0
At Age 40	39.9	41.3	42.4	43.5	44.3	45.1	45.4
At Age 65	18.2	19.2	19.9	20.6	21.1	21.6	21.8

Source: Statistics Canada, 1976-1996, and Ontario Ministry of Finance projection assumptions (reference scenario), 2006-2031.

At the Census Division level, the mortality structure has been updated using the revised population estimates provided by Statistics Canada. These data were used for developing the ratio of actual to expected deaths for each Census Division. There is no major change in these ratios.

International Migration

Immigration

Canada received 244,600 immigrants — of which Ontario received 130,000 — in Census year 2004-05. The Canada level is within the 2004 calendar year target of 220,000 to 245,000 immigrants set by the federal government. For the calendar year 2005, the federal Minister of Citizenship and Immigration announced a target of 225,000 to 255,000 immigrants. In addition, in 2005 the federal government announced measures to speed up processing times, including new funding over two years.

The immigration assumption in the updated projections takes account of these developments. In the reference scenario, the projection assumption for 2005-06 is increased to 135,000 from 125,000 to reflect the announced measures to speed up processing times. The reference assumption is then set at 125,000 annually over the rest of the projection period, the same level as in the 2004-based projections. This level approximates the average of the past 10 years of immigration to Ontario and is in line with Ontario's historic share of the federal target.

For the low- and high-growth scenarios, the immigration assumption is adjusted for 2005-06 but remains unchanged from the assumption used in the 2004-based projections over the rest of the projection period. Immigration in the low-growth scenario is set at 100,000 in 2005-06 and 90,000 annually for the remainder of the projection period. Immigration in the high-growth scenario is set at 160,000 in 2005-06 and 150,000 annually for the remainder of the projection period.

The projected immigration shares for each Census Division and the age-sex distribution of immigrants have been updated to reflect the revised immigration estimates provided by Statistics Canada. For most Census Divisions, the shares remain constant throughout the projection period. The recent age-sex distribution of immigrants is also assumed to remain constant.

Emigration

The preliminary estimate for total emigration from Ontario is 20,100 in 2004-05. As in the 2004-based projections, emigration is assumed to increase in a linear fashion from this new level in all three scenarios, reaching 30,000 by 2030-31.

Projected shares of emigration for each Census Division and the age-sex distribution of emigrants are updated to Statistics Canada's most recent estimates. The shares and the age-sex distribution are both based on the average of the past six years.

Non-Permanent Residents

The assumption for this component remains unchanged from the 2004-based projections for all three scenarios and for the distribution by Census Division. According to Statistics Canada, there were about 182,700 Non-permanent Residents living in Ontario in 2005 (e.g., foreign students, temporary workers, refugee claimants).

In the reference scenario, the change in the stock of Non-permanent Residents is assumed to be 4,000 annually over the 2005-06 to 2011-12 period in the reference scenario. This is the average of the change in Non-permanent Residents over the past 30 years. The annual gain is then assumed to decrease gradually to zero by 2030-31.

The high-growth scenario assumes an annual gain of 4,000 Non-permanent Residents over the entire projection period. The low-growth scenario assumes no change in Non-permanent Residents over the projection period.

Projected shares of Non-permanent Residents for each Census Division are based on the share each Census Division had in the 2001 Census. The age-sex distribution of Non-permanent Residents is updated based on the latest revised estimates. The pattern is assumed to remain constant over the projection period.

Interprovincial Migration

New preliminary estimates from Statistics Canada show that Ontario experienced a second consecutive year of net loss through interprovincial migration in 2004-05. The trend points toward negative net interprovincial migration in the early years of the projections. The 2004-based reference scenario assumption of a net gain of 5,000 annually from 2005-06 onward has been adjusted to show net losses in the first two years of the projections. From 2007-08 on, the assumption of a net gain of 5,000 through interprovincial migration remains unchanged in the

updated projections, based on the long-term positive interprovincial migration pattern for Ontario in the past.

To maintain the range between the three scenarios, the low- and high-growth scenario assumptions have also been lowered for the first two projected years.

At the Census Division level, the interprovincial migration rates have been updated to take into account an additional year of data — the revised 2003-04 estimates. The rates are now based on a six-year average covering the 1998-99 to 2003-04 period, compared to a five-year average in the 2004-based projections.

Intraprovincial Migration

Intraprovincial migration, or the movement of population within the province, affects population growth only at the Census Division level. At the Ontario-level, intraprovincial movements net out to zero in all three scenarios.

Revised estimates of intraprovincial migration for 2003-04 have been released by Statistics Canada. Recent trends that affect the assumptions in the projections update are a lower net loss of population for most Northern Ontario Census Divisions and lower net gains for Eastern Ontario.

The projected number of people by age leaving each Census Division for each year of the projections, as well as their destination within the province, is modeled in the update using the most recent origin-destination migration rates by age for each Census Division. The reference period on which these rates are based has been updated to include the revised 2003-04 estimates. The rates in the update are based on a six-year average covering the 1998-99 to 2003-04 period. The evolution of intraprovincial migration patterns in each Census Division was studied to identify specific trends. For some Census Divisions, the intraprovincial migration rates assumptions have been adjusted slightly in the update to reflect these trends.

Sources: Statistics Canada estimates, 2001 to 2005, and projections of Ontario Ministry of Finance. Population at July 1.

Notes: 1. Reference Scenario assumes that the Total Fertility Rate increases slightly to 1.53 by 2011.

Immigration is 135,000 in 2005-06 and 125,000 annually thereafter.

2. Low Scenario assumes that the Total Fertility Rate declines gradually to 1.3 by 2031.

Immigration is 100,000 in 2005-06 and 90,000 annually thereafter.

3. High Scenario assumes that the Total Fertility Rate increases gradually to 1.75 by 2031.

Immigration is 160,000 in 2005-06 and 150,000 annually thereafter.

TABLE 2
(000s unless otherwise noted) CHARACTERISTICS OF ONTARIO POPULATION IN 2031 UNDER THREE SCENARIOS

	Reference Scenario	Low Scenario	High Scenario
TOTAL POPULATION	16,395.3	14,535.9	17,854.5
Male	8,125.8	7,197.0	8,879.6
Female	8,269.4	7,338.9	8,975.0
% Male	49.6	49.5	49.7
% Female	50.4	50.5	50.3
MEDIAN AGE (Years)	43.0	45.0	42.3
Male	42.2	44.0	41.6
Female	43.9	45.9	43.0
AGE GROUPS			
0-14	2,537.5	1,973.8	2,977.9
Male	1,299.5	1,011.5	1,525.9
Female	1,238.0	962.3	1,452.0
15-24	1,811.6	1,510.6	2,003.2
Male	927.0	773.6	1,025.2
Female	884.7	737.1	978.1
25-44	4,291.3	3,792.8	4,607.5
Male	2,150.0	1,911.9	2,304.9
Female	2,141.3	1,881.0	2,302.5
45-64	4,177.2	3,830.8	4,442.9
Male	2,077.7	1,905.8	2,215.7
Female	2,099.5	1,925.0	2,227.2
65-74	1,958.1	1,888.3	2,060.5
Male	956.6	920.3	1,011.6
Female	1,001.5	968.0	1,048.9
75+	1,619.5	1,539.6	1,762.6
Male	715.1	674.0	796.3
Female	904.5	865.6	966.3
POPULATION COMPONENTS (2030-2031)			
Births	154.8	115.1	189.5
Deaths	134.8	142.0	124.9
Natural Increase	19.9	-26.9	64.6
Total Net Migration	100.0	60.0	134.0
Total Increase	119.9	33.1	198.6
Ratio of Total Net Migration to Total Increase	83.4	181.2	67.5
AGE GROUP SHARE (%)			
0-14	15.5	13.6	16.7
15-24	11.0	10.4	11.2
25-44	26.2	26.1	25.8
45-64	25.5	26.4	24.9
65-74	11.9	13.0	11.5
75+	9.9	10.6	9.9
DEPENDENCY RATIOS¹			
Youth	24.7	21.6	26.9
Elderly	34.8	37.5	34.6
Total	59.5	59.1	61.5

Source: Projections of Ontario Ministry of Finance.

Notes: 1. Youth and elderly dependency ratios are the ratios of those 0-14 and 65+ to the core working-age population (15-64).

The total dependency ratio is the ratio of youth plus the elderly to the working-age population.

2. Figures may not add to totals due to rounding.
