

# Top Reasons for Emissions Test Failure

- Fuel Metering out of Specification (faulty computerized engine control, fuel injectors, carburetor.)
- Faulty Oxygen Sensor
- Ignition System Faults (spark plugs, wires, timing, distributor cap, etc.)
- Vacuum Leaks (vacuum lines, gaskets, etc.)
- Catalytic Converter Malfunction
- Engine Mechanical Problems (low compression, excessive blow-by, burned valves, etc.)
- Faulty EGR System
- Evaporative Emission Control System Faults (gas cap, evaporative emissions canister and controls.)
- Air Injection System Malfunction
- Faulty PCV System
- Faulty Thermostatic Air Cleaner
