

MINERAL FEEDER FOR HORSES

NEW 10:77

Build this sturdy, weatherproof mineral feeder from two fenceposts, two sheets of exterior 1/2-in. plywood or Aspenite, 32 ft of 2 x 4-in. lumber and some asphalt roofing. For better durability, use pressure-treated posts and galvanized nails.

Do not paint the plywood and framing; a good penetrating wood stain looks better in the long run and requires less maintenance. Locate in the pasture with the opening facing away from the direction of most rainstorms.
