

Stop the Alien Aquatic Invaders!

Carp, bullfrogs and Eurasian water milfoil.

What do these species have in common?

None of them belong in British Columbia. The impact of aliens on native species can be disastrous. Our ecosystems do not always recover! The cost of containing zebra mussels in the Great Lakes alone may soon reach \$5 billion annually.

Keep BC Waters Healthy

- Don't move ANYTHING from one water body to another.
- Keep your aquarium animals and pond plants at home.
- Don't use live bait or parts of fish for bait.

LIFE JUST WOULDN'T BE THE SAME WITHOUT OUR NATIVE SPECIES!
