## WARM CALF BARN - 40 INDIVIDUAL CALF STALLS

This plan gives details for a building to house 40 calves in individual calf stalls.

The plan consists of a 22'-0" wide by 53'-0" long clear span building. Calves are housed in two rows of individual stalls.

At the back of the stalls is a barn cleaner for manure removal to the outside.

Ventilation is by means of a continuous inlet on one side of the building and exhaust fans on the other.
