

SHEEP SPRAY CHUTE

CPS
PLAN Q4815

NEW 5:77

This spray chute is portable and is designed primarily to be used either by a large sheep enterprise or by several small flock owners. The unit is hauled to a corral designed to herd the sheep through the portable chute. The chute has a moveable ramp on each end and is stabilized by adjustable legs at both ends of the main frame. To operate the spray unit, use a tractor with a field sprayer which in turn is attached to the spray chute hose. Be careful to thoroughly clean the field sprayer and related parts before using the sheep spray.

Excess spray material drips into a collection sump beneath the floor of the chute. This sump has a drain attached for emptying into a suitable container.
