**FARM STORAGE BUILDING
22 Feet x 26 Feet**

**CPS
PLAN 8343 NEW 7:64**

This is a plan for a 22 by 26 foot building for storing small farm equipment, two vehicles the size of a 1/2 ton truck or perhaps a large car. There is sufficient room to open doors on either side of the vehicle and to build a 2 foot deep workbench across one end. For extra length, the building can be lengthened in increments of 2 feet.

The building can also be used to store other small equipment which can also be hung on the walls or suspended from the ceiling.

The concrete floor is reinforced with wire mesh and placed on compacted gravel fill to control cracking. The floor surface is sloped (1/4 inch per foot) to the front so that no water will accumulate. The walls and roof are framed with sawn lumber.

A man door provides side access to the building at the workbench and a window permits sunlight to enter above the workbench.
